The CHAIRMAN said it was his duty to congratulate them upon having opened a portion of the line, although only a small one. The latest reports received from India told them of the progress that was being made with the works; and perhaps the best proof of that was afforded by the fact that the monthly expenditure for construction had risen from an average of 25,000*l*. to 40,000*l*. That was in some measure accounted for by the circumstance that they were now carrying on the works at both ends of the line—at Bombay in the north and at Surat in the south. The distance open was 29 miles, but the line as yet reached neither of the large towns of Surat or Baroach, nor the Taptee nor Nerbudda rivers. With regard to the opening of the next portion of the line, one of their engineers, who recently came home on leave, had told him what he believed would be the state of the line at the close of the present year. The opinion was expressed that by that period they might open 30 miles south of Surat, across the Taptee, through the valley to the Nerbudda, which had to be bridged, and from thence 14 miles beyond the Nerbudda. That would give a total distance of 120 miles, with only one break at Nerbudda. The remainder of the line into Bombay he had every reason to hope would be open from Bombay to Ahmedabad by the close of 1861. They would then have a complete line through a rich and populous country, and one which he thought must pay uncommonly well. He would remind them that for a long time past this line was considered by many persons to be impracticable, running, as it does, along the seaboard, and meeting in its course various rivers, some of

them of great extent. The Nerbudda required a bridge of 60 spans, each of 60 feet, and that was considered an impracticable river; but as an instance of the rapidity with which the works were prosecuted, he might mention that from November to March last the river Taptee had been bridged with 30 spans of 60 feet each, and the superstructure completed as well. He was sure the meeting would be glad to hear the opinion of their works which had been expressed in a letter received from Colonel Edwin Evans, dated April last. He stated:—

"I stayed here (Surat) nearly twenty-six hours, examining with great interest the noble bridge now in course of construction. I cannot tell you how delighted I was with the screw piles. Their appearance is, in the first place, most classical, as they form beautiful Doric columns. Then, their strength, durability, and the admirable way in which they are now screwed, all excited my surprise and wonder. The Nerbudda viaduct will be a most magnificent work when completed; and I think there is every prospect of most if not all the piles being down before the monsoon."

Journal of Mercantile Law.

AGENCY: MERCANTILE INSTRUCTIONS: RESPONSIBILITY OF AGENTS.

An interesting case was decided at the June Term of the New York Court of Appeals, involving the application of the general principles of the law of agency. The plaintiff sought to make the defendants, who were their agents, liable on the ground of having departed from their instructions in prematurely selling a quantity of flour consigned to them in England.

At the trial of the cause a verdict and judgment was rendered in favor of the plaintiff, from which the defendant appealed to the Court of Appeals, asking for a new trial on the ground of error committed by the court below. The following is the opinion of the Court of Appeals, reversing the judgment of the court below and ordering a new trial.

DENIO, J.—The case turns very much upon what is to be considered the true meaning of the letter of June 27, 1846. In that letter the plaintiffs expressed their desire that the cargo of flour in question should be withheld from the market until the operation of the new corn law should have produced its results, The direct effect of the law was greatly to reduce the duty upon wheat and flour imported into the United Kingdom. Its operation upon the owners of flour then lying in bond at the British ports, and of such as should thereafter arise, would be to give them a more advantageous competition with the holders of domestic flour by the amount of the reduction of the duty. If they sold their flour free of duty, or in other words, if they paid the duty themselves, they could sell at a smaller nominal price in consequence of the reduction of the duties and yet realize larger profits on the sales. The price of domestic flour must always be a material element in determining the market of the imported article, as the two classes of produce immediately come into competition in the English markets. The revenue duties may be looked upon as parcel of the expenses of foreign shippers of flour and are of the same character so far as this question is concerned, as the freight or insurance. It is for his interest to have them fixed at the lowest rate. Hence the plaintiffs regarded the corn law for the reduction of the duties as a market advantage in their favor which they were desirous of realizing the benefit of. But they saw also what was sufficiently obvious, that this advantage might be neutralized at least, if not more than balanced, by the great accumulation of imported flour remaining in and awaiting the new parliamentary measure which, in the event of a passage, would be released at the anticipated low duties, and thrown upon the market in competition with their own flour taken out by the Nicholas Biddle, and producing what is termed a glut in the market The object of the instructions of the 27th June plainly was to guard against this state of things. The plaintiffs said to the defendants in effect, we desire to have the benefit of the new law, which we trust will pass, but we fear that if our flour is sold when the first introductions for competition take place immediately upon the passage of the bill, we shall lose the advantage. We desire, therefore, that it may be withheld from the market until the operation of the new law shall have produced its results, in other words we wish to have the benefit of the new law, unqualified by the consequences of the glut in the market which we foresee will take place immediately after its passage. But there were other circumstances which it was foreseen would enter into the state of the market, the most material of which was the approaching harvest in the United Kingdom, which must always have a material influence upon the price of breadstuffs in the market of that country, as it is well known they have for the same reasons in the markets of countries which export grain. The plaintiffs, therefore, did not direct the defendants to withhold their flour from market for any definite period, which, if they had done, the defendants must have obeyed the direction at their peril, nor did they require that it should be kept out of market until any particular amount of diminution of the stock released from bond should have been realized, but they chose to express their desire in very general terms. They wished their flour to be held until the operation of the new law should have produced its results. This, of course, cast upon the defendants the duty of determining, under all the circumstances bearing upon the question, when the period referred to should arrive. This would not depend wholly upon the degree to which the old stock of imported flour should have been reduced, but also upon the prospect of the domestic corn. It was no doubt implied that the flour was not to be sold until the stock of imported flour existing when the law should pass should have been materially reduced by consumption, though the direction is not to that effect in terms, it is recited as a belief of the defendants that a reduction would cause an improvement in the market, as it obviously would, if not met by counteracting circumstances; we are to determine, therefore, whether, upon the construction which has been given to the letter, the defendants departed from the instructions contained in it by selling flour on the 4th August, supposing it had all been sold on that day. The act took effect as a law June 30, and immediately all the flour then in bond was released by the payment of the reduced duties, and that subsequently arriving was entered and the duties at once paid. The holders immediately became free sellers. The demand from this country was large and freely met. These sales were for consumption, not a speculation. They were, therefore, the kind which were referred to in the plaintiff's instructions. They operated to reduce the stock in bond at the time the act passed, but the evidence does not furnish any means of ascertaining the amount positively of such reduction, or how far it was balanced by fresh importations, though it appears that the quantity on hand continued to be large. While this State of things was going on, the plaintiff's letter was received on the 12th of July, and about a week after, on the 18th, the vessel with the flour arrived. It should be remembered that when the letter was written it was not known in New York that the act had passed. In fact it received the sanction of Parliament the same day on which it was written. The letter looked to the passage of the act and not to the arrival of the flour, as the time when the reduction referred to would commence. So far as the plaintiffs knew it might not become a law until after the flour should have arrived. Indeed, they were not certain that it would become a law at any time. What they chose to forbid (if the letter is to be looked upon as peremptory) was that their flour should not be thrown upon the market in competition with the mass which would be on sale immediately upon the passage of the act. Now the sale of the first parcel of the flour was made five weeks after that point of time. During all of which interval sales were being constantly made for consumption. In the opinion of the Superior Court, at General Term, the letter is construed as though the defendants were forbidden to sell until the stock of flour should be reduced, by consumption, after the arrival of the Nicholas Biddle, and it is reasoned that as it was sold soon after that time it was not withheld from market for any period. The charge, I think, contains the *same* idea as to the construction of the letter. But, upon that construction the defendants would be obliged to withhold the flour from market, though, when it arrived, the effect of the law had been fully ascertained. The meaning of the letter plainly is, that the plaintiffs did not wish the flour sold during the existence of the glut which it was anticipated would prevail upon the passage of the act. In my opinion the defendants were not, on the 4th of August, restrained from selling the flour by instructions contained in the plaintiffs' letter. The market had been working for five weeks under the influence of the law. The letter had fixed no period for the continuance of the experiment, and the defendants were left to determine whether the time had arrived when it would be for the plaintiffs' interest to have the property disposed of in the view of all the circumstances of the case. They were, nevertheless, bound to the exercise of good faith, and of the prudence and skill which agents to whom the property of others is entrusted are always obliged to employ, and that was the extent of their obligation. That the view is correct is apparent from the plaintiff's own letter of July 31. This was written, it will be remembered, four days before the first parcel of flour was sold. In that communication the defendants say, "we suppose that ere this the crop of wheat has been ascertained as to its probable yield, and the grain and the flour conformed to such result, we, therefore, ask you to exercise your discretion in effecting sales for us." As this letter was not received until after the last sales of flour, it cannot be used to dis-

pense with any instructions binding upon the defendants when the sales ware made, but it affords evidence that the plaintiffs considered that the result of the English harvest was a material element in determining when the market would have attained the equilibrium which it was supposed would be temporarily disturbed by the large entries for consumption immediately upon the passage of the act. This was precisely the view which the defendants appear to have taken of the case when they made the sales. The grain circular of the third of August which the plaintiffs gave in evidence, declared the harvest as progressing favorably and the weather was remarkably fine. Then it was proved affirmately on the part of the defendants that no improvement in the price of flour resulted from the passage of the corn law at any time during the year 1846.

Upon the question whether the defendants had violated their instructions, the burden of proof was upon the plaintiffs. All the material testimony bearing upon the subject was produced by them. There was no question of credibility to be determined by the jury, for the evidence was not in any respect contradictory. Thinking, as I do, that there was no evidence tending to show that the defendants sold the plaintiffs' flour prior to the time when the operation of the new corn law had produced its results so far as those results affected the price of flour, I think the Judge erred in submitting it to the Jury to determine whether there had been such breach of instructions.

Upon the second question, whether, leaving out of view the alleged instructions, there was evidence upon which the defendants could be charged with a breach of duty in selling the flour at the time they did, and for the price which was obtained, I think there was an equal defect in the evidence. In the first place, it was proved that all the large holders of flour were freely selling at the price which then prevailed, and that the defendants themselves were among the sellers. On the 6th of August they sold 3,000 of their own flour at a less price than that which they obtained for the plaintiffs. It was shown that all the indications were in favor of an abundant domestic harvest, and no immediate improvement in prices was looked for among the dealers in breadstuffs in that market, the prices obtained were the market prices prevailing at the time of the sales, and for some time afterwards, the plaintiffs' flour, was a damaged article, and liable to further depreciation if kept on hand. The subsequent extraordinary rise was owing to causes wholly exceptional in their character, which were not so far developed when the sales took place as at all to influence the market; and could not have been anticipated with any degree of sagacity. In looking at the case after the event, we can see that if the defendants had refrained from selling, the adventure would have resulted quite differently as regards the plaintiffs. They would have realized large gains, instead of having suffered a loss, but it would not have been owing in any degree to the corn law.

It seems plain to me that there was not the slightest reason in the evidence to impute blame to the defendants, and that there was nothing for the jury to deliberate upon. If these views prevail with my brethren, the judgment must be reversed and a new trial ordered.

Railroads in Cuba.

As stated by us a few weeks since, there are now finished and in course of construction, 27 different railroad lines, comprising altogether 1,215,522 kilometers (about 818 English miles) of which some 500 miles are in full operation. The principle line, the first ever constructed, extending from Havana to La Union, was commenced in 1835; That from Cardenas to Macagua in 1838; and the Jucaro road in 1839. All the rest have been traced and commenced since 1840. We copy the following list of Cuban lines and the remarks thereon from the Havana *Messenger*:

Havana to La Union, with two branches, Cardenas to Macagua, Cardenas to Jucaro, Matanzas to La Isabel, with one branch, Regla to Guanabacoa (horse cars), Matanzas to Bemba, Caibarrian to S. Andres, Cienfuegos to Sagua, Carahatas to Quemados de los Guines, Trinidad to Sancti Spiritus, Macogna to Trinidad, Mallorquin to Macagua, Sagur la Grand line, Havana to Matanzas, Guines to Matanzas, one branch, Havana City Railway, Guanabacoa to Cojimar, Havana to Pinar del Rio, one branch, Havana to Marianao, Pinar del Rio to Coloma, Sancti Spiritus to port Las Tunas, Nuevitas to Puerto Principe, Cobre (copper mines) to Punta de Sal (at St. Jago), Guantanamo railroad, St. Jago to Ste. Cristo, branch from Ste. Cristo to Maroto, branch from Maroto to Sabanilla, San Miguel to Baga (Puerto Principe,) the Caney branch, belonging to the line from St. Jago to Sabanilla.

With the assistance of a good chart of the Island, it will easily be seen at a first glance, than when all these lines are finished and in operation, the principal and most important cities and districts of the Island will be connected and all the lines together will form a sort of grand central trunk, extending its branches to both coasts.

We are most happy that we are able to state that the work on the principal lines not yet finished is progressing rapidly, and that a system of solidity and durability in the manner of constructing has been recently adopted, which, unfortunately, was overlooked to a great extent in the earlier part of Railroad building in this Island. Some arrangements have been entered into recently, between the Havana and the Regla and Matanzas Railroad Companies, that will tend to avoid great expenditures in a double line running almost parallel to each other in a portion or section between this and Matanzas, and from what we have been able to glean in different directions, we are fully persuaded that the future constructions of Railroad Lines in this rich and flourishing Island, will be conducted in the manner best calculated to promote both public and private convenience.

Coal Burning Engines on the New York Central Railroad.

Statement of six months' operations with five coal burning engines upon the Albany and Schenectady division of the New York Central Railroad:

DESCRIPTION OF ENGINES.

No. 18, built on the road, for coal burning, in 1859; has a combustion chamber 4 feet long, with 176, 1 5 8th inch tubes 8 feet long. Fire-box of Low Moor iron 5-16 inch thick, with 3.5 inch water-space. Cylinders 14 × 24 inches, driving wheels 56 inches.

No. 199, built at the Schenectady Locomotive Works, for wood burning, cylinders 16 × 22 inches diameter of driving wheels 56 inches.

No. 56, built at the Schenectady Locomotive Works, for wood burning, cylinders 16 × 22 inches, diameter of driving wheels 50 inches.

No. 20, built on the road in 1859, for wood burning, and as a helper up the grade in connection with engine No. 67, cylinders 14 × 24 inches, diameter of driving wheels 48 inches.

No. 67, altered from a wood burner to a coaler, the alterations are the Hopper grate with brick arch in the furnace. Single exhaust pipe 4 inches diameter, with an open stack similar to the English.

NUMBERS OF ENGINES AS ABOVE DESCRIBED.	18.	199.	56.	20.	67.
Miles run	13,946	10.264	13,644	14,800	9,050
Cars drawn	3.067	2,026	3,185	-----	----
Coal used, lbs.	578,900	----	----	-----	264,460
Wood used, c'rds	------	367	571.5	555	----
Cost of coal	$1,418 30	----	----	-----	648 13
Cost of wood	213 95	1,385 91	3,121 55	2,048 16	200 79
Cost per mile for all fuel	12.09	13.50	15.55	13.84	9.38
Cost per mile for repairs	3.61	9.84	2.95	1.27	5.32

Wood rated at $3 84 per cord, and coal at $5 00 per ton. Taking the cost as wood as on the division above only, would give about fifty per cent. of fuel saving in favor of coal; and taking the lowest rate of wood, twenty-five per cent. in favor of coal; and this is the comparison with freight engines.

As to the comparison of wood and coal in the same engine, we have the following: No. 67, with the common grate, and burning wood at $5 00 per cord, ran from August to September, 1858, 9,700 miles with 250 cords of wood, costing $1,750, or 18.04 cents per mile. After being fitted with Jones and Stevenson's hopper grate, with coal $4 90 per ton, the engine ran in the same months as above, in 1859, 8.880 miles, using 224,550 lbs. of coal, costing $599 15, or 6.87 cents per mile. The wood used for kindling during the same time cost $197 50, or 2.22 cents per mile; making the total fuel cost per mile 9.09 cents. This engine is used as a helper upon the steep grades; its dimensions are: Cylinders 17 × 20, six 4 feet driving wheels and four 26 inch truck wheels; furnace, 48 × 39 × 60 inches; 148 two inch copper flues 12.5 feet long; weight of engine 62,000 lbs., tender 40,000 lbs., total 102,000 lbs. The experiments made in January showed the average evaporation to be 9,25 lbs. The hopper grate as applied to these engines has been made to burn Authracite coal; with what success is not reported.

A New Steam Passenger Car.

A new steam passenger car, "The Novelty," has just been put upon the Western Division of the Pennsylvania Central road. The Pittsburg *Chronicle* thus speaks of it:

The car is built pretty much after the fashion of the cars used on the Birmingham Passenger Railway, and in exterior appearance differs but little from those vehicles. It is twenty-five feet long, and will easily accommodate forty passengers. The seats are arranged in the same manner as in the street railway cars, and are exceedingly well finished and comfortable. Some six feet of one end of the car is partitioned off, and here is placed the engine, through which the vehicle is moved. It is but four horse power, and on a level grade the car makes thirty miles per hour, and on an ordinary grade will easily accomplish twenty or twenty-five. But if its speed with such an engine be extraordinary, the inconceivably small quantity of fuel it consumes is even more so. With two bushels of coal, which may be had at a cost of seven cents, it will run one hundred miles! This shows with what advantage cars of this description might be introduced on our passenger railways, and furnishes the most convincing evidence of the cheapness of steam as a motive power, even on such lines, when compared with horse flesh.

The machinery is not observable at all from the outside, nor is there anything in the appearance of the car to denote that it is worked by steam, beyond a delicate little smoke pike ascending through the roof, which might be easily mistaken for a stove pipe. The trip occupied us some six hours, including various delays at the different stations along the road, where the car was an object of the greatest curiosity, and attracted crowds of wondering spectators. The "Novelty" is the first car of the kind ever built, and judging from its performance we set it down as a decided success. It is intended for the accommodation of pic nic and pleasure parties, a service for which it is admirably adapted.

Export of Breadstuffs.

The following is a table of the exports of breadstuffs from New York to foreign ports for the first half of the current year, compared with the same period last year:

	1859.	
Flour, bbls.	301,475	$1,966,679
Wheat, bush.	18.316	25,466
Corn, bush.	100,066	96,954
	419,857	$2,099,099
	1860.	
Flour, bbls.	500,407	$2,914,395
Wheat, bush.	1,278,718	1,627,878
Corn, bush.	1,240,529	919,081
	3,019,654	$5,460,854
	419,857	2,099,099
Increase	2,599,797	$3,861,755

—*Boston Transcript.*

Prince of Wales' Canadian Car.

The car fitted up by the Grand Trunk Railway Company for his Royal Highness the Prince of Wales is now in Toronto receiving its finishing touches at the hands of Messrs. Jacques and Hay. A great deal of ingenuity as well as taste has been exercised in its construction. On the outside it varies in no respect from those used in ordinary by the company, but once inside, and a great difference is seen. The car itself is divided into five compartments. The first is intended as a sitting room for the Prince and the noblemen accompanying him, and is fitted up with every possible convenience. In it there are five large arm-chairs and two sofas covered with dark morocco. The centre is occupied by a small table, on which stands a lamp. A large mirror, a rack for books, and an exceeding beautiful chronometer, hang from the sides. The ceiling of the car is of the finest birdseye maple, divided into panels by strips of gilded moulding. Contrasting with this are the sides of the carriage of dark walnut, also relieved at regular intervals by ornamental gold work. Over each panel, running round the entire room, are placed carved and gilt imitations of the Prince of Wales' crest, bearing the motto "Ich Dien," worn so many years ago on the field of Cressy. The appearance of the room, though exceedingly pleasing, is free of anything like gaudiness or of overstrained display. Entering the next compartment we find it smaller in width than the proceeding one, owing to the fact that allowance had to be made for a passage whereby to communicate with another room at the further end of the car. It is fitted up with many conveniences. Over the roof is placed a large cistern, a pipe from which descends into a filter, communicating with a tap rising from a marble-topped table. The pipe, by being arranged in the same way as the worm of a spirit still, is made to pass through a large quantity of ice, that a supply of cool water may be obtained. Near by this arrangement is a small wine closet and set of drawers, in which are arranged a number of plates and dishes suitable for use under such circumstances as it may be expected they will be used. Accompanying the china are knives and forks and silver spoons—sufficient altogether for twelve persons. The furniture here is all of black walnut. The next two compartments are state rooms, with a couple of beds in each. The washing-stand and dressing table are fitted with marble tops. Mirrors hang from the walls, and various contrivances for holding brushes, towels and clothes are also supplied. The last compartment in the car we suppose is intended for servants. It is supplied with a lounge, and the sides and ceiling are fitted up with much the same description of work as in the first mentioned room. The doors are each supplied with plate-glass panels, engraved with the rose, shamrock and thistle. Very great care has been taken to secure proper ventilation. The invention of Mr. Sheriff Ruttan has been called into requisition, and a contrivance adopted by which the air, after having passed through a cistern of water, where it is cleansed from dust, is admitted into the car through a number of registers. Further to prevent the dust finding admittance, frames of network have been provided, fitting in windows, which may thus be opened without inconvenience. The cost of the car, which must be large, we are unable to State. —*Toronto Globe, June 2.*

Cleveland and Toledo Railroad.

The Cleveland and Toledo Railroad Company, under the superintendence of L. D. Rucker, exhibits for the past year a most favorable statement as regards the condition of the road and its equipment and the close economy of its working expenses. Although the year's business has been light compared to some previous years, the full working expenses have been only about 44 per cent. of the gross earnings—including the expenses on the Northern Division—which, if deducted, would show the expenses on the main through line of the Cleveland and Toledo Railroad Company, about 42 per cent. of the earnings. The track as a whole is in excellent order, and portions cannot be excelled in the country. The equipment is ample and in first rate condition; and, better than all, not a single accident has occurred during the year to passengers or employees. We doubt if any road in the country doing a similar business to the Cleveland and Toledo, can show so low a per centage of working expenses, unless by sacrificing the road itself. So far from this being the case on the Cleveland and Toledo, the road and machinery is now in better condition than they were a year ago. Superintendent Rucker is entitled to great credit for his careful management of the important trust committed to him.—*Cleveland Herald.*

Mileage Tickets on the Reading Railroad.

On the first of July, the Reading Railroad issued mileage tickets at a discount of twenty-five per cent. entitling the holder to travel two thousand miles at any time, in the cars of the company, between any of the stations. Thep rice of the ticket is $45, and we should think business men, who have much traveling to do in the region traversed by this excellent road and its branches, would find the arrangement an economical as well as convenient one.—*Pottsville Mining Record.*

The Pensacola and Georgia, and Savannah, Albany and Gulf Railroads.

The following resolution in reference to the connection of these roads, was passed by the Directors of the Savannah, Albany and Gulf Railroad, at their meeting on the 9th ult.:

Resolved, That this company will accept the proposition contained in the letter of President Houston, of the date of May the 4th, for a connection between the Pensacola and Georgia Railroad and the Savannah, Albany and Gulf Railroad, on a line east of the Allapaha river; provided the Pensacola and Georgia Railroad Company will give guarantee to this company that there shall be no discrimination as against freights or passage destined for the Savannah, Albany and Gulf Railroad; and upon the further condition, also, that the point at which the said railroad connection shall terminate on the line of the Pensacola and Georgia Railroad shall be the initial point of any extension which the Pensacola and Georgia Railroad Company, or its assigns, may construct in a southern or south-easterly direction, with a view to a junction with the Florida Railroad, or other roads terminating at Tampa Bay or other southern seaports on the Peninsula of Florida.

We are informed that the Directors of the Pensacola and Georgia Railroad Company have approved of the action of President Houston, and have authorized him to make all necessary arrangements to carry into effect the proposed connection on the basis of the resolution of the Savannah, Albany and Gulf Company. If this connection is accomplished, it will subserve the real interest of all parties west of the point of junction, and at the same time it will accommodate all those east, who may desire facilities for reaching Savannah. But more than all, the point of junction will become the initial point of an extension looking to Tampa Bay or any other point as a terminus on the Peninsula.—*Tallahassee Floridian.*

South-Austrian and Lombardo-Venetian Railway.

In the London *Times* City Article of the 4th ult., appeared the following notice of the above company:

"A second communication has been received on the working of the South Austrian and Lombardo-Venetian Railway. After referring to the increase in the receipts for the first three months of the present year, contrasted with 1858, (1859 being left out of the comparison as exceptional on account of the Italian war,) it states that the reserve has been raised from £40,000, the amount fixed by statute, to £223,000. With regard to the cost of the lines not yet finished, it is pointed out that, except on the Carinthian portion of 108 miles, where numerous engineering works will raise the outlay to about £17,000 a mile, the expenditure on the other 290 miles of the Hungarian system will be less than £9,000 a mile. The Croation line of 84 miles is calculated at about £9,200 a mile. These figures are, it is said, among the most moderate estimates for railway works, and will enable the transport at corresponding low rates of the wines, cattle, cereals, and other produce from Hungary and the Eastern provinces of Austria to the outlet of Trieste. Three sections alone will be costly—that of the Tyrol line across the Alps and two portions of the Bologna line across the Apennines. The latter, however, offers the great advantage of connecting Tuscany and Leghorn with the Lombardo-Venetian system, while the former will connect the various ports of Italy with Southern Germany."

Troy and Greenfield Railroad.

The State Engineer, Col. Ezra Lincoln, has decided upon the connection of the Troy and Greenfield Railroad with the Vermont and Massachusetts road at Greenfield, according to the original survey at Cheapside. This settles the question so far as these two roads are concerned. The Vermont and Massachusetts road will furnish the frogs to make the connection, and convey the stone to Green river, for the bridge abutments. The road will be completed to Shelburne Falls in one year, and to the tunnel in eighteen months.

Anthracite Coal Trade.

The following abstract of company reports shows the coal tonnage for the season, as compared with last season to the same dates:

Roads.	Season.	Last Season.	Inc.
Reading, July 1	961,208	834.606	126,601
Schuylkill Nav., July 1	501,611	526,753	24,857
Lehigh Nav., June 30.	402.140	375,996	26,143

Northern Central Railway.

The Harrisburg (Pa.) *Telegraph* says:—"Since March, 1859, there has been laid on this road thirty-two miles of rail of the best quality of 60 lbs. to the yard. The whole distance from Baltimore to York is fifty-nine miles, thus leaving but twenty miles to be laid, which is being done as rapidly as possible. The road from York to Harrisburg is comparatively new and in first rate order, and from Harrisburg to Sunbury altogether new. From Baltimore to York it is being ballasted with stone, so that, in a short time, it will be as solid and smooth as the Pennsylvania Railroad."

Pacific Railroad--Southwest Branch.

We learn that a further extension of this road has been made, the trains running through to Jamestown, 66 miles from Franklin, and 103 from St. Louis. The work is being vigorously pushed between Jamestown and the mouth of the Little Piney, 127 miles from St. Louis—the company being determined to reach that point with the track in March next. Beyond the Piney, the contractors are at work at the tunnels and several of the heavy sections in Pulaski county. We hear that the Postmaster General has ordered a daily mail to be transported over this route, and that the service will be commenced immediately.

Little Rock and Fort Smith Railroad.

The Van Buren (Ark.) *Press* says that the grading in Crawford Co. for this road is progressing as fast as the means of the company will warrant. As soon as the water in Arkansas river rises sufficiently the iron and cars now between Van Buren and Napoleon, will be taken up, and the track-laying be commenced opposite the former place.

Cincinnati and Chicago Railroad.

We learn that the construction of this road is progressing rapidly. Between Valparaiso and the crossing of the New Albany and Salem Railroad, some 11 miles, the iron has all been laid. Thence to Logansport, a distance of about 48 miles, the work is progressing at the rate of nearly half a mile per day, with a good prospect of getting the line in running order early in the fall. The company have made a running contract with the Pittsburg, Fort Wayne and Chicago Road, by which the latter is to take the trains into Chicago from Valparaiso promptly upon their arrival at the latter point.

Malden and Melrose Railroad.

The following gentlemen have been elected directors of this road for the ensuing year: Joseph F. Boyd, Charlestown; M. M. Rice, Boston; R. E. Demmon, Somerville; Wm. J. Eames, Malden; Charles E. Powers, Charlestown; John E. M. Gilley, Chelsea; John H. Blake, G. W. Palmer, Boston; E. F. Hodges, Roxbury. The financial condition of the company was represented to be good, the receipts of the road showing a continual increase. The question of a dividend was to be decided in a day or two. The probability was that one would be paid. Charles E. Powers, of Charlestown, was elected treasurer of the corporation.

York and Cumberland (Me.) Railroad.

The franchise of this company, and the right in equity to redeem the same, have been sold on execution for $7,076 89. At the same time were sold all the right in equity which the Company had to redeem their depot grounds, and other grounds in the vicinity. These brought $400. The road will now pass into the hands of the mortgage bondholders, and be extended.

Madison and Indianapolis Railroad.

The Directors and Officers of this road for the current year are as follows:

President, F. H. Smith.

Directors, Nathan Powell, W. M. Dunn, J. B. McChesney, P. McMartin, E. H. Miller, J. Ferguson and F. H. Smith.

Treasurer, T. P. Smith.

Superintendent, D. C. Branham.

Secretary, Thos. Pollock.

Bethlehem Rolling Mill.

The stockholders of the "Bethlehem Rolling Mills and Iron Company," met for organization on the 14th inst., and after performing the requirements of the charter, proceeded to the election of seven Directors. The following gentlemen were chosen for one year: Hon. A. Packer, Mauch Chunk; Edward Roberts, Philadelphia; J. S. Johnston, New York; John Knecht, Saucona; Aug. Wolle, Chas. B. Daniel, Chas. W. Rauch, Bethlehem.

We are pleased to see that the indefatigable labors of those engaged in the enterprise have eventually been crowned with success; and are happy to state that the erection of the works is now in contemplation forthwith, under the superintendence of John Fritz, Esq., who has been for a number of years Superintendent of the "Cambria Iron Works," at Johnstown, Pa. $150,000 have been subscribed, and the company will in all probability increase the subscription list to $200,000.—*Bethlehem Advertiser.*

Pacific Railroad of Missouri.

The following information in reference to the progress being made on this road, is from the President of the company. He says:

The road will be opened to Otterville by the 15th of the ensuing August, and I have tangible evidence that we will have the rails for the road to Georgetown, in Pettis County, (Sedalia,) to lay the same, and open up the road to Sedalia by the 15th of November. Moreover, I shall put under contract *immediately the heavy sections about the Big Muddy*, and the whole road, before long, to Knob Noster.

I see no great difficulty in opening up the road to Warrensburg by July, 1861, and, on behalf of the Directors, I trust all rumors to the contrary will not be heeded.

Southern Pacific Railroad.

The Marshall *Republican* has a letter from Col. Todd, which contains the following in regard to this road:

The friends of the Southern Pacific Railroad have no reason to be discouraged by the proceedings in Congress. The company has ample resources to proceed rapidly with the work, which in that event will render more than $400,000 worth of subscriptions available, and these with the $150,000 to become due under the loan bill, after twenty-five miles are graded, will place this great enterprise beyond any contingency of personal influence, and beyond any indispensable necessity for Congressional aid. The completion of twenty-five additional miles by the 1st of January next, and another twenty-five miles in process of construction, will have a decided influence at the next session of Congress, and will effect what is of transcendent importance, that of rallying to the support of the company the cordial feelings of Texas.

Panhandle Railroad.

From the Wellsburg *Herald*, we learn that engineers passed through that town last week, en route for Wheeling, surveying the projected extension of the Panhandle Railroad. In referring to this fact, the *Herald* says:

The present movement is by the Pennsylvania Railroad Company, under provision of the act of the Legislature of last winter, granting the right of way from Pittsburg to Steubenville, with bridge, &c., and requiring them to connect with Wheeling, either by way of the Hempfield route, or by way of this town, and to make a railroad bridge over the Ohio at Wheeling, on the conditions as laid down in the law. The company has accepted the conditions, and gone to work; and the question now is, which of the two routes to select. It is said they have selected the site of their new bridge at the upper end of Wheeling Island, availing themselves of the high grounds on this side. The company will be governed altogether by considerations of practicability and economy, without much favoritism, and the indications are that on such considerations the Wellsburg route will be adopted.

Mobile and Ohio Railroad.

We learn that the tract is being rapidly laid on this road between Okolona, Mississippi and Jackson, Tennessee. The rails are being laid both ways, and have reached a distance of about twelve miles north of Okolona and about sixteen miles south of Jackson. There remains yet about 95 miles of track to be laid, which, we are informed, will be finished by the end of the year.

San Antonio and Mexican Gulf Railroad.

It is said that this company have succeeded in purchasing in Boston, 2,000 tons of iron rails, sufficient to lay the road from Lavaca to Victoria.

Union Springs Railroad.

We learn that a portion of the iron for this road has been received in this city.—When it is considered but a few short months have transpired since the first earth was turned in the commencement of this important work, it speaks well for those who are pushing it forward that track-laying is so near at hand as to demand the presence of the iron. It is an earnest that the enterprise will be pushed vigorously through, and the road completed at an early day.—*Montgomery, Ala. Adv.*

Council Bluffs and St. Joseph Railroad.

The *Council Bluffs Bugle* of the 6th instant, says: "The work on the Platte county road is progressing rapidly northward from St. Joseph.—Track laying is going on at a rapid rate between St. Joseph and Savannah, and the work of grading is going on between Savannah and Forest City, to which place it is expected the road will be finished by the first of November. That will bring the road within one hundred miles of us, and the finishing of our road, which is to connect with the Platte county road at the State line, to Pacific City, will reduce the distance eighteen miles more."

Lake City and Suwannee Railroad.

This company organized a few days ago, by the election of the following Directors, viz: Gen. Wm. B. Ross, C. A. Huntington, Jesse S. Wood, S. L. Niblack, Col. W. M. Ives, Dr. A. R. Bexley and M. Whit Smith. Subsequently, the Directors held a meeting, and unanimously elected Gen. Wm. B. Ross, President.

Quietly as has this apparently little enterprise moved on, it is, nevertheless, a work of much importance, and we shall not be surprised, if, when completed, it turns out to be a paying investment. That vast and fertile region known as the valley of the Suwannee, including the County of Lafayette, and the South-western portion of Columbia, will find an immediate and available outlet by this road, and should rally to the aid of these engaged in its construction.—*St. John's Mirror.*

Clinton Co., (Ind.) Road.

The farmers and merchants of Clinton county, Ind., are building a branch road from Colfax station on the Indianapolis and Lafayette road, which will penetrate the heart of that county and enhance the market value of every kind of export. The track is already graded, and but a small amount is needed to enable the Directors to purchase the iron. The line will probably be operated by the Lafayette and Indianapolis Company. Colfax station is 21 miles from Lafayette, and 43 from Indianapolis. Frankfort is the county seat of Clinton county, and is a growing town.—*Cin. Com.*

Rolling Mill at Peoria.

J. M. Crawford & Co., of Peoria, propose to build a rolling mill in that city worth $75,000, if the citizens will subscribe $25,000 of the amount. The *Transcript* strongly urges upon the people of Peoria a ready compliance with these terms.

Railroad Earnings.

The Hudson River Railroad earnings for June

1860, were	$129,996 34
June, 1859	115,444 13
Increase	$14,552 21

The earnings for the month of June for three years past were:

June, 1858	$95,219 28
June, 1859	115,444 13
June, 1860	129,996 34

The earnings of the Michigan Southern Road since the commencement of the fiscal year compare as follows:

	1859.	1860.
March	$143,025 45	$173,533 89
April	145,258 39	193,995 56
May	138,084 14	179,987 75
June	122,785 48	138,344 83
Total four months	$549,763 46	$685,868 03
Increase		$136,104 57

The earnings of the Galena and Chicago Union Railroad for the month of June were:

	1859.	1860.
From Passengers	$74,289 01	$58,862 75
" Freight	32,184 15	26,466 59
" Mails, etc.	4,193 13	4,000 00
Total	$110,566 29	$89,309 34
Decrease		$21,346 95
Corrected earnings for the previous month		$115,505 50

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning) for the month of June, 1860, compared with the same month of last year:

	1859.	1860.
Passengers	$12,520 94	$11,923 77
Freight	26,254 68	31,270 58
Other sources	1,686 86	1,839 53
Total	$40,462 48	$45,033 88

The earnings of the Cincinnati, Hamilton and Dayton Railroad, for May, 1860, were, $47,081 70
Approximate do. for June 47,606 51
Earnings C. H. & D. R. R. for May, 1859, $40,280 19
Approximate do. for June, 1859 42,086 23

The earnings of the Chicago, Burlington and Quincy Railroad Line for June were:

	1859.	1860.
Freight	$78,903 10	$120,153 42
Passengers	41,706 57	37,440 63
Mail and miscellaneous.	3,772 24	6,219 05
Total	$123,381 91	$163,813 10
Increase		$39,431 19

The following are the earnings of the Great Western Railway for the week ending June 29th, 1860:

Passengers	$17,542 21
Freight and live stock	10,669 89
Mails and sundries	1,352 74
Total	$29,594 34
Corresponding week of last year	30,952 66
Decrease	$1,358 32

The Macon and Western Railroad earnings in June, 1860, were:

Passengers	$11,070 04
Freight	13,451 42
Mail	838 50
Total	$25,359 95
June, 1859	22,654 75
Increase	$2,705 21

Annexed are the statistics of the Illinois Central Railroad traffic:

American Railroad Journal.

Saturday, July 14, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, $3 00; do., colored in counties, $4 00; in pocket form with cover, $1 00—the latter sent by mail, pre-paid, upon receipt of the price.

The Prospects Ahead.

There now seems to be little doubt that the hopes of our people in every part of the country will be fully realized in abundant crops. The crop first made, and the most precarious one, *wheat*, is now being harvested. It is abundant in quantity, beyond all former precedent, and excellent in quality. In a month more it will be coming to market, and in good time to make up for the short crop abroad. The other two great staples, cotton and Indian corn, are equally promising.

The effect, in prospect, of abundant harvests is already showing itself in an increased activity in all our great interests. Our railroads, in particular, are to be the great gainers in their increased revenues. Already have these shown a great improvement over the past year. A corresponding advance has taken place in their securities. The difference in their present market value over a year ago is to be counted by hundreds of millions. Securities which, a few months ago, were regarded as worthless, are now sought for at their par value. A return of prosperous seasons serves both to give business to our railroads and to convince the public of their value.

Lebanon Springs Railroad Company.

This company obtained an act from our State Legislature, passed on the 12th of April, 1860, extending the time for completing their railroad under their charter two years from the passage of the act. The original charter authorizing the construction of the road was passed 8th March, 1853, and amended 24th June, of the same year. The company was thereupon organized, and proceeded to buy the rights of way, &c., and about 20 miles of the grading is done, leaving 32 miles yet to be completed (the road being altogether 52 miles in length). This road commences and connects with the New York and Harlem Railroad at Chatham Four Corners, and runs north 52 miles through a most beautiful, rich and populous country, until it connects at Bennington with the Western Vermont Railroad and other roads in a direct line to Montreal, Canada.

Florida Railroad.

The track of this road is now fully completed from the Ocean to the Gulf, cutting off, in the route from the Eastern ports to New Orleans, 1,000 milles of the dangerous navigation of the Florida Keys. This work is the first fruit of the internal improvement policy of the State, inaugurated a few years ago by one of its most public spirited and valued citizens, the Hon. D. L. Yulee. An improved highway across the neck of the Peninsula, on the line of the Florida Railroad, was, for a long time, a favorite project of the General Government, and a survey was made, by its authority, for a canal. Such a work, however, was found impracticable, and the railroad has taken its place.

We learn that measures are being actively prosecuted to bring this road into immediate use, as a part of a great line of commerce and travel between the Eastern and Gulf ports. Contracts, we believe, have been made by the company for a number of iron steamers, to run from the western terminus of the road to more important ports on the Gulf. It is also in contemplation to construct a class of boats to run from the railroad up the Mississippi river as far as Cairo. Measures are, also, in progress for sea-going lines of steamers from New York, and probably to other Eastern ports, to Fernandina, the eastern terminus of the road. It is assumed, and upon apparently sufficient evidence, that the more valuable kinds of freight between New York, for example, and the Gulf ports and the Lower Mississippi, can be taken over the above road, in connection with lines of steamers, cheaper, and much more expeditiously, than over any other route. The construction of the road was based on this idea, and the company propose to take all the steps necessary to realize its plans and objects, and to render its road a portion of the great route of commerce between the extremes of the country. The road will not be run except for the accommodation of the local traffic, till the through route is formed by placing on it the lines of steamers necessary for this purpose.

Amboy, Lansing and Traverse Bay Railroad.

We learn from the Albion *Mirror* that ground was broken upon this road at Homer on the 2d inst., and that several parties of workmen will soon be engaged on the route between those two points. The *Mirror* hopes to be able soon to announce the completion of the grading from Lansing to Jonesville.

Southern (Miss.) Railroad.

The Vicksburg *Whig* of 27th ult., says: "We are glad to hear that there has been a steady increase in the business of this road, and that there is a decided improvement in the condition of the roadbed and machinery. The company expects to receive by the 1st of September eight new first class engines, four first class passenger cars, three mail and baggage cars, and one hundred freight cars. Thus equipped, with the whole line of its road completed to Meridian by October next, we have no doubt that this great enterprise, which owes its success to the individual effort and perseverance of the few business men that took it in hand, will do a heavy passenger and freight business, and reward its owners with a greatly increased amount of net earnings."

Illinois Central Railroad.

According to the statement of this company in another column, it will be seen that the earnings of this road for the first six months of the year were $1,174,508 88, against $857,425 51 for same period last year. The gain of $317,083 37 previous to the wheat harvest, now close at hand, promises well for the estimate of $700,000 increase for the year. In the Land Department the turn in the affairs of the company is equally decided. $193,905 91 worth of lands were sold in the first five months, and in June the sales ran up to $71,280 02, and the collections to $50,905 92. The Commissioner reports that the inquiries for land are daily increasing, and that quite a colony of farmers from Canada are settling on the branch from 175 to 200 miles south of Chicago. The subdivision of the tracts sold in 1855 to 1856 to new purchasers, while it does not add to the aggregate of sales, which is now $16,000,922 95, is the most healthy part of the business. These re sales will exceed half a million of dollars this season, and are all to parties who will enter upon the lands. The Company has canceled $1,484,000 of the Construction Bonds, and $205,000 of the Freeland Bonds, from the collections at the Land Office. The total of cash and bonds received at the Land Office is $3,579,906 17, upward of 20 per cent. upon the amount of sales. This large amount has been collected from new settlers, who have suffered from several bad harvests, and who have been crippled from the inevitable wants incident to the settlement of a new country. The census of Illinois is now being taken, and it is supposed, will exceed 1,800,000, against 855,384 in 1850. The value of Illinois lands, of which the Central Company has still on hand for sale nearly 1,350,000 acres, will surely be enhanced during the next five years, and we may look, after the present harvest of wheat is sold, for a great increase of the demand for land. This is the best guarantee for the payment of the land notes held by the Illinois Central—upward of $12,000,000, and only three and a-half millions short of their Construction Mortgage, originally $17,000,000, and now reduced to $15,515,000 by the bonds canceled and delivered to the Trustees.

Evansville and Crawfordsville Railroad.

We learn from the Evansville *Journal* that the surveying and final location of the Extension of this road from Terre Haute to Rockville is now under way; and that enough money has been subscribed to ensure its construction.

Insurance Dividends.

The New Amsterdam Fire Insurance Co., has declared a semi-annual dividend of 8 per cent. payable on demand. The Empire City Fire Insurance Co., a dividend of 7 per cent. payable on demand. The Mechanics Fire Insurance of Brooklyn 7 per cent. The Nassau Fire Insurance Co., of Brooklyn 10 per cent. The Guardian Life Insurance Co., 3½ per cent. The Citizens Fire Insurance Co., 12½ per cent. The Commerce Fire Ins. Co., 8 per cent. The East River Ins. Co., 6 per cent. payable on demand. The Merchants Ins. Co., 10 per cent. The American Fire Ins. Co., 3½ per cent. and a scrip dividend of 50 per cent. on the earned premiums for the year. The Gallatin Ins. Co., 5 per cent. The Etna Fire Ins. Co., 5 per cent. The Pacific Fire Ins. Co., 12 per cent. The Tradesman's Fire Ins. Co., 4 per cent. The Jersey City Ins. Co., 5 per cent. The Clinton Fire Ins. Co., 7 per cent. The Gebhard Ins. Co., 5 per cent. The U. S. Fire Ins. Co., 5 per cent. The New York Equitable Ins. Co., 10 per cent. The Mechanics and Traders Ins. Co., 10 per cent. The Market Ins. Co., 12 per cent; also a scrip dividend of 33⅓ per cent. The Standard Fire Ins. Co., 5 per cent. The Arctic Ins. Co., 6 per cent. The People's Ins. Co., 4 per cent. The New World Ins. Co., 5 per cent. The Lafayette Ins. Co., 5 per cent. The Relief Ins. Co., 8 per cent. The Hope Fire Ins. Co., 5 per cent. The Knickerbocker Ins. Co., 6 per cent. The Adriatic Ins. Co., 5 per cent. The Fulton Fire Ins. Co., 10 per cent. The Fireman's Trust Ins. Co., of Brooklyn 4 per cent. The National Fire Ins. Co., 10 per cent. The Williamsburg City Fire Ins. Co., 7 per cent. The Hanover Fire Ins. Co., 6 per cent. The Washington Ins. Co., 5 per cent. The Montauk of Brooklyn 5 per cent.

Bank Dividends.

The Importers' and Traders' Bank have declared a semi-annual dividend of 4 per cent., payable on the 10th inst. The Market Bank a dividend of 3½ per cent., payable on the 10th. The East River Bank a dividend of 3½ per cent., payable on the 16th. The New York County Bank, 3½ per cent. The Manufacturers' Bank of Brooklyn 5 per cent., payable on demand. The Park Bank, a dividend of 4 per cent. The North River Bank, 3½ per cent., payable on the 10th. The Phenix Bank, 3½ per cent. The New York Exchange Bank, 5 per cent. The Butchers' and Drovers' Bank, 5 per cent., on the 16th. The Hanover Bank, 3½ per cent. The Chatham Bank, 3½ per cent., July 5th. The Merchants and Traders Bank, Jersey City, 4 per cent., July 3d. The Merchants Bank of St. Louis, a dividend of 5 per cent. for the last six months, payable at the Bank of America, on and after the 10th of July. The Farmers' Bank of Kentucky, 5 per cent., payable July 7, at the Bank of America. The Bank of Kentucky, 5 per cent., payable on the 7th inst. at the Bank of America. The New Orleans Canal and Banking Company, a semi annual dividend of 5 per cent., payable at the office of M. Morgan & Sons, No. 37 William street, August 6. The Planters' Bank of Tennessee, a dividend of $37.75 per share out of the surplus profits of the Bank, as follows, viz: Ten per cent. and fractional parts of one share, in cash, on and after the 16th inst., and the balance, either in cash or new stock at par, at the option of the Bank, on or after Septem-

ber 17, 1860. The amount of the dividend thus made is $511,739, the capital stock amounting to $1,355,600. The Southern Bank of New Orleans, a semi-annual dividend of 4 per cent., payable to the Northern stockholders at the Chemical Bank, on the 16th inst.

Interest on Stocks, Bonds, etc.

The interest coupons on the bonds of the State of Florida, due July 1, will be paid by H. Meigs, Jr.. and Smith 39 William St.

The coupons on the 1st mortgage bonds of the Long Island Railroad Company at the City Bank, Brooklyn.

The coupons on the 1st mortgage bonds of the Ohio and Mississippi Railroad Company, due July 14th, will be paid by Messrs. Barclay and Livingston, 24 Beaver St.

The interest due July 1, on 3d mortgage bonds of 1872, of Harlem Railroad Company, at the office of the Company, cor. of 26th st., and 4th Av.

The interest on Chicago Sewerage bonds at the American Exchange Bank.

The coupons of Jackson Co., O., at the Ocean Bank.

The coupons on the bonds of the Housatonic Railroad Company by Messrs. Ketchum, Son & Co., 40 Exchange Place.

The coupons on the water loan of Jersey City, at the Mechanics and Traders and Continental Bank.

The interest on the State debt of Michigan, at the Artizans Bank.

The coupons on the bonds of the State of Minnesota, by Messrs. Clark, Dodge & Co.

The interest on the freight debt of Ohio, and the temporary loan due July 1, will be paid from the 1st to the 15th, at the office of the Ohio State Agency, 25 William St.

The semi-annual interest on the first mortgage bonds of Southern (Miss.) Railroad Company, due July 1, will be paid at the Bank of America.

Coupons No. 8 of the 1st mortgage bonds of the N. O. Jackson and Great Northern Railroad Company, at the Bank of America.

Interest coupons on all bonds of the city of New Orleans, or former municipalities, will be paid at the Bank of America.

Messrs. Winslow, Lanier & Co., will pay interest on the following securities: Indiana State Bank Loan; Indiana Central Railroad Second Mortgages; Indianapolis and Bellefontaine First Mortgage Bonds; Indianapolis, Pittsburg and Cleveland Second Mortgage Bonds, due Oct. 1; Ross County, Ohio; Washington County, Ohio; Town of Harmar, Onio; Town of Marietta, Ohio; City of Chillicothe, Ohio.

The following coupons due July 1, will be paid at the banking house of Duncan, Sherman & Co.; Chicago City, Municipal: Chicago City, Water Loan; Buffalo City, Water Loan; Buffalo City, Municipal; Albany City; Utica City; Hannibal & St. Joseph Railroad; Mobile & Ohio Railroad; Buffalo & State Line Railroad; Detroit & Pontiac Railroad. Also, the interest on New York State stock issued to the following Railroads: Auburn & Rochester, 5½ per cent; Tonawanda, 5½ per cent; Schenectady & Troy, 6 per cent.

The Nassau Bank will pay the interest coupons, on the bonds of Belmont County, Muskingum County, and City of Zanesville, Ohio; also the balance of principal (50 per cent) on the bonds of the County of Muskingum, and City of Zanesville, Ohio, which became due on January 1, 1860, with the interest thereon to July 1, on the surrender of these bonds; interest on the same ceases on July 1.

The interest on the stocks of the City of New York, due on the 1st of August, will be paid on that day, by Nathan C. Platt, City Chamberlain, at the Artisans' Bank.

The coupons on the bonds of the Troy and Boston Railroad Company, are paid by the Bank of Commerce.

The interest on the bonds of the city of Dayton, O., will be paid by Atwood & Co.

The coupons on the 1st mortgage bonds of the Lackawanna and Bloomsburg Railroad Co., will be paid at the Mercantile Bank.

The Central Railroad Company of New Jersey have declared a dividend of 5 per cent. for the six months ending on the 30th ultimo, payable at No. 69 Wall street, after the 12th inst. The dividends hereafter will be paid quarterly.

The regular quarterly dividend of 2 per cent. has been declared by the Second Avenue Railroad Company, payable on and after the 16th inst.

The Paterson and Ramapo Railroad has declared a dividend of 2½ per cent.

The Paterson and Hudson River one of 4½ per cent.

The New York, Providence and Boston Railroad Company have declared a semi-annual dividend of 2½ per cent., payable at the office of M. Morgan & Sons, No. 37 William street.

The Terre Haute and Richmond Railroad declare a semi-annual dividend of 5 per cent., payable at the Farmers' Loan & Trust Co.

The King's Mountain Railroad Company have declared a dividend of 3 per cent., payable July 20th.

The Macon and Western Railroad Company has declared a quarterly dividend of 3 per cent., payable on the 16th inst., at the Bank of the Republic.

The Second and Third, Fifth and Sixth, and Tenth and Eleventh Streets Passenger Railway Companies, of Philadelphia, have announced dividends of 4 per cent. each.

The Chestnut and Walnut Streets Company, one of $1.50 per share.

☞ J. R. Straughan, Esq., late superintendent, has been appointed receiver of the Springfield, Mt. Vernon and Pittsburg Railroad.

☞ Charles B. Hall, Esq., has been appointed receiver of the Milwaukee and Chicago Railroad.

☞ William H. Mitchell, Esq., has been elected president of the Mobile and Girard Railroad Company, *vice* John H. Howard, who declined being a candidate for re-election.

☞ Mr. Henry Smith has been appointed treasurer of the Panama Railroad Company, *vice* Mr. Augustus Hoffman, resigned.

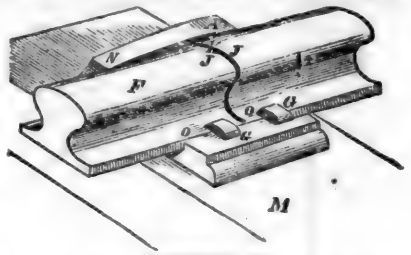
☞ Peter V. Daniel, Esq., has accepted the presidency of the Richmond, Fredericksburg and Potomac Railroad Company, made vacant by the resignation of Mr. Robinson.

☞ Charles Ellis, Esq., has been appointed president of the Richmond and Petersburg Railroad Company, *vice* Peter V. Daniel, resigned.

☞ James J. Day, Esq., has been elected president of the Providence and Stonington Railroad Company, *vice* Mathew Morgan, resigned.

Buffalo and State Line Railroad.

The election for directors of this road took place at Buffalo on the 26th ult. The following gentlemen were chosen.



President—Geo. Palmer.

Vice President—Dean Richmond.

Directors—George Palmer, James S. Wadsworth, Joseph Field, Daniel Drew, Dean Richmond, John Wilkinson, Charles H. Lee, Henry L. Lansing, Hamilton White, Alanson Robinson, George W. Patterson, Charles Moran and William Kasson.

Superintendent—R. N. Brown.

RAILROAD CHAIR.

PATENTED TO
F. G. RANSFORD, of TROY, N. Y.
January 18th, 1859.

THE peculiarity of this invention is the jaw rising on the outside of the chair to a level with the top of the rail. Its object is to transfer the tread of the wheels, at the point where the ends of the rail meet, **from these ends to this jaw**, and thus make **a continuous track.**

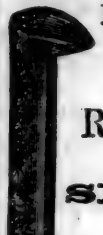
The advantages are obvious: the saving of the ends of the rails and great expense of their repair—the savin of the rolling stock by means of a continuous track—the general safety and comfort of travel.

This Chair has been in successful use on a portion of the Troy and Boston Railroad for nearly three years, and is now being introduced on various roads in all parts of the United States.

The right to use these Chairs will be sold, or the Chairs themselves will be furnished, at as reasonable rates as any approved Chair in the market.

Full particulars may be learned by addressing the Agent,

A. K. CORY,
90 CEDAR ST., NEW YORK CITY.



The Southern Oil Company.
OFFICE No. 60 NEW ST.,
NEW YORK.

SUPERIOR CAR BOX OIL,
At 25 per cent. below the cheapest Lubricating Agent in use.

THE Oil is chemically **pure**; is entirely free from Gum and Acid; and at thirty-eight degrees below freezing point retains its perfect limpidity.

LEMUEL W. SERRELL,
SOLICITOR OF
AMERICAN & FOREIGN PATENTS,
No. 121 NASSAU ST., NEW YORK.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD CO.,
New York, June 22, 1860.

AT A MEETING OF THE BOARD OF DIRECTORS of the ILLINOIS CENTRAL RAILROAD COMPANY, held THIS DAY, it was

Resolved, That an assessment of Five Dollars per share upon the Capital Stock of the Company, for the purpose of discharging the outstanding Free Land Bonds be, and the same is hereby called, payable on the 20th day of July, 1860; and that the same be payable on the stock registered in the City of New York, at the office of the Company in that city, and on the stock registered in London, at the office of Messrs. Robert Benson & Co.; and that parties desiring to pay their instalments in London, may pay the same at the rate of four shillings two pence to the dollar; and that the Free Land Bonds, with accrued interest, shall be received at par in settlement of the call.

Resolved, That the transfer books be closed on the 14th day of July, and re-opened on the 20th; and that no transfers be permitted on, or after that date, of shares upon which such assessments shall not have been paid. By order of the Board.

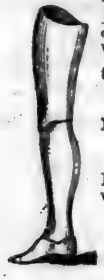
3t26 A. E. BURNSIDE, Treasurer.

$500,000 EIGHT PER CENT. LAND GRANT MORTGAGE BONDS OF THE TEXAS AND NEW ORLEANS RAILROAD COMPANY (Texas Division), secured by a mortgage upon one hundred and six (106) miles of railroad and its appurtenances, of the estimated cost of $2,920,000, and upon seven hundred and sixty-eight thousand (768,000) acres of valuable land, are now offered to the public as one of the most desirable and reliable securities at present upon the market.

THIS ROAD

is the Texas Division of the great trunk line which, within twelve to eighteen months, will connect Houston, Galveston and every important point in Texas, with New Orleans, and, in communication with the lines running North and already completed, place New York within 90 hours of Houston.

THE BONDS



will be redeemable on 1st November, 1878, bear 8 per cent. interest; coupons payable semi-annually, on 1st May and 1st November, in the City of New York.

As additional security for prompt payment of the coupons, pending the completion of the entire road, are mortgaged by special trust-deed, 76,800 acres of land, together with town lots and individually donated lands, at present valued at $600,000.

Maps, prospectuses, copies of charter, trust deeds, land grants, and every information, may be had upon application to C. CONGREVE & SON,
No. 6 Pine st.; or
E. WHITEHOUSE, SON, & MORRISON,
1m24 No. 38 William st., Merchants' Exchange.

MARKS' PATENT AND IMPROVED

ENGINEERING WORKS.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.				SHEET No			
1.	General Table for all Bases and all Slopes.			13.	for Base 18 ft.	Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.			14.	"	20 "	1½ to 1
3.	Base 12 ft.	Slopes	1½ to 1	15.	"	24 "	1½ to 1
4.	" 14	"	1½ to 1	16.	"	25 "	1½ to 1
5.	" 15	"	¼ to 1	17.	"	26 "	1½ to 1
6.	" 15	"	1 to 1	18.	"	28 "	¼ to 1
7.	" 15	"	1½ to 1	19.	"	30 "	1 to 1
8.	" 16	"	¼ to 1	20.	"	30 "	1½ to 1
9	" 16	"	1 to 1	21.	"	30 "	1½ to 1
10.	" 18	"	¼ to 1	22.	"	32 "	1 to 1
11.	" 18	"	⅜ to 1	23.	"	32 "	1½ to 1
12.	" 18	"	1 to 1	24.			

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

MASON'S SPERM OIL,
AND DEALERS IN
SPERM, WHALE, LARD AND OTHER OILS,
For Railroads, Steamers, Machinery and Burning

THE IMPERIAL
LUBRICATING OIL,
MANUFACTURED BY
J. C. HULL & SONS,
(Formerly W. HULL & SON,)
Nos. 108, 110, 112, 114, 116 & 118 Cliff St.,
NEW YORK,
For Railroads,
Machine Shops,
Steamships,
Mills, etc.

THIS OIL having been before the public for a **long time,** and having been **extensively used** in different parts of the country, and on each occasion meeting with **unqualified approval,** renders the manufacturers confident when making the following claims:—

1st. **Its first cost is much less** than that of any Oil in use, of known merit or acknowledged worth.

2nd. It will **not in any way gum** or **clog up** any journal or bearing, **all the gum in the Oil being entirely decomposed.**

3rd. It will keep all journals and bearings **cool, clean** and **bright** as new, thus not only **saving wear and tear,** but **saving also** no inconsiderable amount of **motive power.**

4th. It is fully as **durable** as any Oil in the market, and consumers are invited to make their experiments on such journals as are inclined to heat up.

5th. It is **sweet** and **clean,** and entirely **free from all odor or unpleasant smell.**

6th. It will remain limpid at as low a temperature as sperm.

CERTIFICATES from a large number of **Railroad** and **Steamboat officers,** also, prominent **Manufacturers** and **Machine Builders,** can be seen by application as above.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be **superior** for **Burning,** and **TWENTY-FIVE** per cent. more **durable** than Sperm Oil, for Lubricating, and the **only** Oil that is in all cases **reliable,** that will keep bearings **cool,** and

WILL NOT GUM.

In no case has it failed to meet the approval of the consumer.

The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it **superior** to any other for Lubricating.—For sale **ONLY** by the Inventor

F. S. PEASE, 61 Main st., BUFFALO.

Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.

TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the

EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.

To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of

THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.
JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE. Secretary, 90 Wall st., N. Y.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 43 Pine st., New York City.
E. M. BRIGHAM, Sec'y.

HUDSON RIVER CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every departme t of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Railroads in New Hampshire.

The report of the Railroad Commissioners of New Hampshire states that the number of railroad corporations chartered by, and operated in whole or in part within the limits of the State is twenty-one. Only one new corporation has been added to the number since the date of their last annual report, viz: the Manchester and North Weare. Of the above, eleven are operated by lease or contract with other connecting roads, and six are now but parts of longer lines, extending into the neighboring States of Maine, Vermont, and Massachusetts.

The Iron Mines of New Jersey.

What is properly termed the iron region of New Jersey, consists of a belt of country entering it from New York, on the northeast, crossing it to the southwest, and passing the Delaware into Pennsylvania, after traversing part of the counties of Passaic, Sussex, Morris, Warren, and Hunterdon. The average breadth of this section is nearly twenty-five miles on the northeastern margin, but gradually contracts to less than half that width at the southwestern limit. In the main, it corresponds with that mountain system which is properly an extension of the New York Highlands, and belongs geologically to the primary formation, consisting of granitic gneiss, mica, quartz, hornblende, etc. This is first encountered on the line of the New York and Erie Railroad at Sufferns, where it is intersected at nearly right angles by the Ramapo valley. It is remarkable, however, that ore has seldom if ever been found in the first of those ridges. In all the others it is obtained more or less combined with sulphur, and in Sussex county with zinc. We propose giving in as short space as possible the principal characteristics of the New Jersey iron beds, and the improvements made in working those metals during the past few years:

QUALITY OF THE ORE.

Like the veins in Orange county and in the Adirondack mountains, the ores dug in New Jersey consist principally of magnetic oxyd, the specular peroxyd being abundant in only one locality. They are granular and crystaline, but not so coarse as some of those obtained near Lake Champlain. Sometimes they are close, compact, smooth and lustrous; sometimes they occur in columns and square pointed blocks; frequently they are endowed with polarity, so as to be able to sustain their own weight as magnets. In Ulster and Putnam counties, in this State, and in Pennsylvania they belong to what is termed the brown hematitic kind, being much softer and leaner than the magnetic. The latter usually yields from 50 to 60 per cent. of metal in the furnace and occasionally 70; while in the crucible it has been known to give from 75 to 80 per cent. But in the most westerly ridge of the iron region a considerable amount of brown hematite has been obtained and other beds are believed to exist. In some places, as at the Sweede mine, in Morris County a tough, fibrous ore has been found, rendering it highly valuable in the manufacture of nails, for which it is used by the Boonton Iron Company. The Andover ore, without any admixture, was made, for many years, into beams, rails, bars, &c., by the Trenton Iron Company. At Wawayanda and Oxford Furnaces the kind obtained has been found to be admirably adapted for the manufacture of railroad car-wheels. But the best quality is procurred from the Franklinite, after the zinc has been expelled, and is largely in demand for ordnance, cutlery, and such purposes. Next to their extent and richness, *the variety* of iron ores in New Jersey is worthy of special notice. Sulphur appears to be combined with the iron; but in some cases in a proportion so small as not to be injurious; occasionally, however, it is so abundant as to render the metal useless for most purposes. A cheap and effectual method for expelling this intruder is a great desideratum.

DISPOSITION OF THE ORES,

These are found either in vast, irregular masses termed "deposits" or in regular veins, from one inch to twenty feet thick, and between rocky surfaces known as the "hanging" and "foot" walls. Occasionally "horses" or large bodies of gneiss, obtrude themselves from beneath into the beds of iron. The "deposits" appear to be confined principally if not altogether to the Walkill range of hills in Sussex county, the most westerly of the series. At Andover, one has been worked nearly 500 feet long, with a breadth and depth ranging from 20 to 100 feet. It is found at the south westerly end of a ridge, and nearly on a level with the neighboring valley. No connection with any greater body lower down has yet been discovered. At Roseville, the ores are partly deposits and partly veins. But on coming eastward veins alone present themselves, running parallel with the mountain ridges in which they are found, and having an inclination or "dip" in the strata varying from 40 to 80 degrees. In some instances this angle is found to increase according to the depth it reaches, and in all cases it points towards the south east. The veins present themselves as single or double, and in a few cases treble, lying at an average distance of, say, 100 yards apart. In these cases the western is usually smaller in size

and inferior in quality, compared with the eastern. The veins are of all lengths, from a few yards to nearly three miles; but in this case they are apt to be frequently disturbed by what are termed "offsets," throwing the beds some distance out of line by means of "dikes," which appear to have cut off the regular connection of the beds, throwing them to right or left for a short space, beyond which they return to the regular north east and south west direction. As to their depth, no bottom has yet been reached; although excavations have been made nearly 500 feet below ground. It is the prevailing opinion among miners that none exists; if so this fact would settle the question of their origin, showing them to have been injected into the rocks from beneath, instead of having been deposited in layers before the hills were heaved up into their present form.

NUMBER OF THE MINES.

There are, doubtless, more than a hundred places from which ore has been taken out to a greater or less depth, and about half that number are being worked at the present time. They occur in three principal ridges, or belts, which are, however, double in some localities.

Commencing on the northeast, we have the Ringwood mines of Passaic County, and belonging to the same range, in Morris, the Splitrock, Mount Hope, Teabo, Brannin, Allen, Richard, Mount Pleasant, Jackson, Mellen, Byram, Dill, Dickerson, Hibernia, Glendon, Sweede, and other mines.

The second belt occurs west of the three lakes known as Long Pond, Green Pond, and Lake Hopatcong, and comprises the mines of the Wawayanda, Walkill, Hopatcong, and Schooley's Mountain; the principal being the Wawayanda, Edsall, Ogden, Ford, Schofield, Hurdtown, Roseville, and Stanhope, with an extension partly overlapping the last, known as the Mount Olive mines.

The last of the series includes the beds found in Pochunck Hill, Pomple Hill, Stirling, Andover, and the Vernon and Walkill valleys, in which occur the mines of zinc and Franklinite; an extension of the same range passes by Oxford Furnace, in Warren County, where operations have been carried on for more than a century. But new veins and deposits are continually coming to light; one of the former was recently discovered near Succasunny by Mr. Philip R. George, General Superintendent of the Trenton Iron Company's mines.

HISTORY OF THESE WORKS.

It is about 140 years since the first discovery of iron ore was made in New Jersey. This was accomplished by a party of young men sent out from New Amsterdam to explore the interior of the adjoining province. Subsequently a company was formed in England, whose agent, Lord Stirling, succeeded in obtaining immense tracts of mining lands in Northern New Jersey and in the State of New York. Their principal works were situated at Stirling, Rockland County; but they had also works at Ringwood, and are known to have mined quantities of Franklinite, which they carted across the mountains to their furnaces at Stirling. Up to the time of the Revolution some seven or eight thousand tons of metal had been exported to England, the only foreign market to which it could be sent. About the same time, operations appear to have commenced at Oxford Furnace, Succasunny, and several other places, by private individuals; but they confined themselves to taking out small quantities of ore at convenient seasons, and often carrying it to a great distance. Meantime, the London Company had gone to ruin; but numbers of charcoal furnaces and forges began to be erected in the neighborhood of the mines, with varied success. Most of the former have been abandoned and are going to ruins; the latter are in a scarcely better condition. Of the fifty forges in Northern New Jersey, probably half are now doing nothing. They require a better quality of ore than the anthracite furnaces, while yielding a smaller per centage of metal.

The application of anthracite has created a revolution in mining operations as well as the making of iron. Large sums have been invested in the construction of a new class of works for smelting the ore; competent men have been employed to superintend the mines, and these are gradually passing, by purchase or lease, into the hands of incorporated companies, who have put up large engines, instead of the wretched "one horse" fixtures formerly used to hoist the ore. In some cases, perpendicular shafts have been sunk; in others, the natural grade of the ore-bed has been laid with a railroad track; while in many instances, tunnels or levels have been run into the hills. At the Allen mine a steam engine is at work several hundred feet below ground. Railroads and other apparatus have also been constructed for delivering the ore at the Morris Canal, which is the principal outlet now existing. Peter Cooper, of this city, has been a leading pioneer in this great movement.

MINING COMPANIES AND THEIR WORKS.

The first and most important of these is the Trenton Iron Company, (formerly Cooper & Hewitt,) who employ nearly three hundred men in mining at Ringwood, Andover, Roseville, the Schofield, the Dill, the C. S. Dickerson, the Allen, and other mines, besides purchasing ore from private individuals. With exception of small quantities used in the forges near Ringwood, the whole is sent west to Philipsburg, on the Delaware river, where their furnaces are situated. These are supplied with coal from the Pennsylvania fields, and the softer ores from that State to mix with those from New Jersey. The three now in blast are expected to make over 25,000 tons of pig metal the present year. By the Belvidere road this is sent down to the company's rolling mill and wire mill in Trenton, where it is made into beams, railroad bars, and wire of all numbers. Nearly one thousand men are employed by this company at their various works.

The Boonton Iron Works (Fuller, Lord & Co.) employ about one hundred men at the Sweede, Mount Pleasant, Mellen and Orchard mines, all which are situated near Dover. The aggregate product of these will be about 19,000 tons this year. The ore is shipped to the Boonton furnaces, where, after smelting, it is rolled into thin plates and cut into nails and spikes, of which more than 10,000 tons are made annually. The number of employees at these works is over 500, most of whom work by the piece. The want of a railroad to this large establishment and thriving village has long been felt, and an effort is now, we are happy to say, being made to meet it, with every prospect of success.

The Glendon Iron Company of Easton, Pa., have leased the Hurdtown mine, the Ford mine, and the Hibernia mine, besides purchasing largely from the Irondale, the Succasuny, and others.

The Crane Iron Company, whose works are also on the Lehigh, have leased the Byram mine, four miles west of Dover, and also purchase ore from other parties. The numbers employed and the quantities of ore raised annually at these mines are about as follows: Hurdtown, 50 men and 16,000 tons of ore; Ford and Schofield, each about 25 men and 7,500 tons; Succasuny, 30 men and 8,500 tons; Byram, 40 men and 16,000 tons; Irondale, 75 men and 16,000 tons; the Hibernia (Glendon) about 13,500 tons; ditto (Wood's), 20 men and 8,000 tons; the Richard (Thomas Iron Company's), 40 men and 11,000 tons; the Mount Hope, about 60 men and 20,000 tons. These are in addition to the mines worked by the Trenton and Boonton Companies, as well as a score of others of less note, carried on by various individuals. The aggregate product of the New Jersey iron mines cannot be less than 150,000 tons per annum, employing as miners, laborers, teamsters, &c., from 800 to 1,000 men; and in the forges, furnaces, and other iron works of that State, between two and three times that number. With present facilities these works could easily meet a demand of 250,000 tons of ore, or 150,000 tons of pig iron annually.

THE ZINC AND FRANKLINITE MINES.

These are confined to a single ridge in Sussex county, about seven miles in length, between the villages of Sparta and Franklin Furnace. The principal deposits occur at Mine Hill and Stirling Hill. The processes of separating the zinc from the iron with which it is associated, have been so often described that it is unnecessary to explain them here. Mine Hill, formerly the property of the New Jersey Franklinite Company, has lately passed into the hands of the *Boston* Franklinite Company, who are about resuming operations. The old Company failed, the alleged cause being dishonest stock operations. At Stirling Hill the New Jersey Zinc Company and the Passaic Zinc Company are at work with an aggregate force of 150 men, and will probably take out 12,000 tons of ore the present year. This is carted to the canal and manufactured at their respective works in Newark and Jersey City.

The Franklinite and zinc ores, it should be stated, are nearly alike, differing in the relative proportions of zinc and iron contained in each. They are found lying side by side, separated by a thin wall of sandstone, and imbedded in a matrix of crystalized limestone, resting immediately upon the gneiss rock. The Franklinite is smelted in works at the mine, the iron being largely in demand, while it is rejected as unprofitable in the zinc ores proper. More than 15,000 tons of both will probably be taken out this year, and 20,000 in 1861, according to present appearances. These mines may be considered as practically inexhaustible.

The greatest want of that portion of the State is railroads. To meet this, the Morris and Essex line requires to be extended to the Delaware so as to furnish avenues in both directions all the year round and, by its connections, to deliver coal near the mines. A line has just been surveyed and the right of way obtained from Boonton west to the Morris and Essex road and east to the Great Notch, whence the road could be run to Paterson,

Newark or both. From this as a main trunk branches could be run up the several valleys, such as the Walkill, the Hopatcong, the Berkshire, the Ringwood, etc. If the people of that section of New Jersey will only begin in earnest by putting their own shoulders to the wheel, no doubt a fair share of assistance can be procured elsewhere for the purpose of developing one of the richest and most extensive iron regions in this country, and situated almost at our very doors.

Don Pedro II. Railroad.

The following is the substance of a letter from a correspondent of the New York *Times*, dated Rio de Janeiro, Friday, June 8, 1860, giving a description of a tour of inspection recently made by the Emperor over that portion of the Don Pedro II. Railroad now in course of construction by the American contractors:

His Majesty left the Palace of San Cristov at daylight on Saturday last, by special train, and arrived at Belem, the terminus of the first completed section, at 8 A. M., on the same morning, the distance being about 70 miles. At the station he was met by Conseilheiro Ottoni, President of the road: Major Andrew Ellison, Jr. Chief Engineer: Wm. Ellison, Assistant Engineer; Chas. J. Hannah, Esq., one of the contractors; and all the principle functionaries of the Vassouras District. The road, which will, when finished, extend some three hundred miles into the interior of the largest coffee-growing district, was originally the scheme of a Dr. Cochrane, an English resident of this place, he having succeeded in procuring a grant from the Imperial Government for its construction. Finding, however, that years passed away without the work being commenced, and that a *bona fide* company was in formation, the Brazilian Government gave Dr. Cochrane the sum of $150,000 for his right, and issuing a guarantee of 7 per cent. upon the stock, the new company, under the direction of the Government, came into existence, and the first section of the work was commenced by Messrs. PRICE & Co., English contractors. This first section, which extends to Belem, has been completed about three years, but the work was not done to the satisfaction of the company, and evidently pushed through with a view of outside show more than substantiality.

When proposals for the second section of the work were issued by the Company, Messrs. ROBERTS, HARVEY, & Co., American contractors, entered the field, and were the successful competitors. The firm consisted of Messrs. ROBERT and GEORGE HARVEY, W. MILNOR ROBERTS, JACOB HUMBIRD and CHARLES J. HANNAH—the latter gentleman being long and favorably known in Brazil as an enterprising ship-builder in Rio. The portion of the road embraced as the second section, although but seventeen miles in length, is perhaps, viewed in a scientific light, as stupendous a piece of work as any of our mountain crosses in the United States. It has to traverse a mountainous range some 3,000 feet above the level of the sea, and some of the fillings required are enormous, while the shafts for the tunneling have to be sunk in some places upwards of 450 feet, and these have to be cut through the most solid kind of trap rock. To accomplish this work the contractors are allowed seven years, two of which have already expired, and the work has advanced beyond the expectations of the contractors themselves, and much to the surprise of the most scientific resident engineers. At the time the contract was awarded to Messrs. Roberts, Harvey & Co., Col. Garnett of Virginia, was the company's Engineer-in-Chief, but his position was soon after filled by Major Andrew Ellison, Jr., the present incumbent, Col. Garnett having retired on account of ill health. Major Ellison's staff of Assistant Engineers, who are all Americans, consist of Messrs. Marine, T. W. Chandler, William Ellison, Spear Nicholas, Carolus McLellan, John McClenahan, Sidney Royal, Mr. Beckham, and one or two others whose names I am unacquainted with. The subcontractors are Messrs. Sampson, Muhlenburg, Dr. Davis, and John Humbird.

But to return to the Emperor's visit. The whole of the first day was consumed by an inspection of the first eight divisions, when the imperial *cortege* arrived at the fazenda of Senor Commendor Faria. The Emperor dined and slept here, and started the following morning at daybreak to resume his inspection. On arriving at the mouth of the grand tunnel, the Emperor dismounted, and accompanied by Major Ellison, Messrs. Hannah and Sampson, went in and remained some time, highly interested in the mining work. On their reaching the grand shaft, which has already been sunk 360 feet, the Emperor signified his intention to descend, and requested Major Ellison, (being a man about his own size and weight,) in the most affable manner, to go down with him. The Major having seated himself on the other side of the tub, the order to lower was given, and his Imperial Majesty was soon lost to sight in the darkness below. They remained below an unusual length of time, his Majesty being so much interested in the nature of the work, and on his re-appearance in safety at the mouth, was spontaneously greeted with the *vivas* of all present. After descending the other shafts, and entering the completed portions of the tunnel, he proceeded to Brandon, the residence of Mr. Jacob Humbird, who is *the working man* of the line. Here the Emperor desired Mr. Humbird to be presented, and complimented him on the advancement of the work. Lunch was then served, and after passing over the remainder of the line, the Imperial party retraced their steps to Macacos, the residence of Major Ellison, where the Emperor had arranged to pass the night. His Majesty dined and slept here; Mrs. Ellison being permitted to honor his Majesty by facing him at the dinner-table. The Emperor here inspected all the plans and drawings of the road, and the next morning after tendering his thanks to Major and Mrs. Ellison, and officially expressing to Mr. Ottoni, the President of the road, his satisfaction at the progression of the work, and his interest in its completion, he left by special train for the palace, arriving safely at 9 A. M., where he was received by the Empress and the Princesses.

Girard College (Phila.) Passenger Railroad.

The following is the statement of this company July 1, 1860:

LIABILITIES.

Capital stock--10,000 shares—par $50, on which has been paid $15 per share, and there has been an instalment of one dollar per share called, payable July 21st, *which will be all that will be required*	$160,000 00
Sundry indebtedness	4,031 42
Net earnings for 6 months from January to July	10,839 27
Total	$174,870 69

ASSETS.

Railway and equipments, consisting of 25 cars, 138 horses, harness, sleighs, omnibuses, &c., &c	$117,664 28
Passenger railway station, stables, &c.	36,894 33
Ridge Avenue and Manayunk Passenger Railway Company due them upon the settlement of building account	3,310 14
Instalment due July 21st	10,000 00
Cash in hand of Treasurer	7,501 94
Total	$174,870 69

The Company issued no bonds.

It will be observed from the above statement, that after paying the debts due, there will be a balance on hand of $16,780 66, including the net earnings of the road for six months, from January 1 to July 1. The dividend to stockholders of one dollar per share will absorb $10,000 of this amount, leaving a surplus on hand for any contingency of $6,780 66.

German Railways.

In the "Journal of the Statistical Society of London," for the present month, appears a highly interesting and valuable paper on German railways, by Mr. Wilhelm Lazarus, Hamburg, presented to Mr. Samuel Brown, from which we collect the following statistics; adding a few of our own by way of comparison with British railways.

In Germany (composed of 39 different Governments, having different laws, different money, and different weights and measures,) there are three classes of railways:

1st. Government railways—*i. e.*, constructed and worked by the Government.

2d. Shareholders' Government railways—*i. e.*, constructed by Shareholders, but worked by Government.

3d. The Shareholders' railways—*i. e.*, constructed and worked by shareholders.

The German railways here mentioned are all the railways of the countries belonging to the German Diet.

The author remarks: "There is great similarity between the German and English railways as to their unsatisfactory financial state." From the facts which will be presently mentioned it will be seen what this "unsatisfactory financial state" of the German railways is. It may be unsatisfactory to the Germans, but we rather think if British railways paid as well as German, railway proprietors in this country would be rejoicing as a prosperous body.

The author quaintly adds: "But they (railways in Germany) pay better than in England."

We should think they did, indeed!—nearly double as well; but of this, hereafter.

The total length of German railways opened at the end of 1857 was 6,708 miles.

There were then, also, authorized but not opened 2,060 miles, making a total of 8,768 miles opened and authorized.

The capital raised for the lines by shares, and loans up to the end of 1857, was, in Prussia:

Government railways, 7 lines	£9,726,133
Shareholders' railways (government management) 10 lines	9,495,855
Shareholders' railways, 20 lines	24,859,110
In other German Countries:	
Government railways, 8 lines	30,608,990
Shareholders' railways, 17 lines	8,903,559
In Austria:	
All railways	29,158,650
Total	£112,752,297

"The capital raised for the lines in the course of construction was at the end of 1858:

Shareh'ders' railways, new lines, 7 lines	£8,712,860
Do. extensions and branch lines 9 lines	11,290,716
Goverment railways, 4 lines	not stated.

"The capital to be raised for shareholders' railways (government management) and shareholders' railways up to the end of 1858, (Austrian railways excluded,) was £63,262,100

Of which had been raised on original shares	£33,375,000
On loans and debentures.	22,800,000
	56,175,000
Leaving amount to be raised	£7,087,100

"Of the new lines in the course of construction at the end of 1857, (2,060 miles,) 95 miles had been opened in 1858, leaving 1,965 miles in the course of construction at the end of 1858."

The revenue receipts from the 6,708 miles in 1857 were £12,875,913.

Here the annual revenue is about 11½ per cent. of the capital. How happy should we be with such a traffic in relation to our capital!

As in England, the traffic of German railways has much increased in the course of years. The length of the railways has also increased, but the

increase in the traffic has been greater than the increase in the length of line, which is well shown by the following little table:

German Railways, 1834–1857. Comparative results at intervals of four years.

Year.	Receipts from pass'gers per mile.	Rec'pts from goods pr. mile	Total receipts per mile.*
1834	£2	£125	£133
1838	183	220	418
1842	553	257	831
1846	591	390	1,016
1850	466	485	1,028
1854	567	763	1,604
1857	642	1,170	1,919

The ratio of total receipts per mile between England and Germany is as 100: 71."

The average cost of (capital raised for) German railways on the 31st December, 1857, was £16,980 per mile opened, which is a little less than half that of our railways, the ratio being as 48 to 100.

In 1857, the Prussian railways carried 18,414,-094 passengers, and killed only one passenger, and injured but one. What did we do in the same time? According to Captain Galton's report (Board of Trade) we killed 25 passengers on our railways from causes beyond their own control, and wounded no less than 631 passengers. It is true we carried 139,008,887 passengers in that year, (1857,) but the number of killed to carried is one to 5,560,355, the Prussian being one to 18,-414,094. The greater safety of the German railways may, we think, be traced to their more moderate speed and careful working.

The working expenses of German railways in 1857, were 48.5 of the receipts, about the same as ours, notwithstanding that our traffic per mile is much larger.

The per centage of working expenses to receipts on German railways has greatly fallen in the course of years, but owing to the increase of the traffic the cost per mile per annum has enlarged. The great fall in the per centage of expenses has of course benefitted the owners of the German railways. The following table exhibits these interesting facts clearly:

Year.	Miles opened.	Working expenses per cent. of total receipts.	Working expenses per mile.
		Per cent.	£
1834	79	....	...
1835	80	75.0	281
1836	115	62.5	261
1837	131	65.5	252
1838	188	68.9	288
1839	295	73.3	421
1840	392	57.5	416
1841	560	59.2	530
1842	793	57.6	480
1843	980	51.8	471
1844	1,214	50.8	476
1845	1,587	52.9	475
1846	2,100	52.7	535
1847	2,893	53.9	555
1848	3,519	58.3	525
1849	3,944	53.8	510
1850	4,387	51.1	525
1851	4,620	48.4	546
1852	4,839	52.2	794
1853	5,101	52.4	750
1854	5,323	50.5	811
1855	5,754	48.0	869
1856	6,529	48.9	855
1857	6,708	48.5	931

* In the total receipts are included Sunday receipts, most railway companies having some other receipts besides those from passenger and goods traffic.

The per centage of profits on capital of the German railways in 1857 appears to have been 7.05 per cent. According to Capt. Galton, in our case, in 1857 it was only 4.06 per cent., and less than 4 per cent. dividend. We are not quite clear whether the German 7.05 per cent. is profit or dividend. If it be profit on the whole capital the dividend would no doubt be much larger than 7 per cent. since the preferred part of the German railway capital (£22,800,000 up to 1858) pays about 4½ per cent. interest, which would raise the dividend, the profits on the total capital being in excess of 4½ per cent. With us the case is at present different, for although the rate of interest on our preferred railway capital (including loans) is about 4¾ per cent. on the average—not quite 4¾—namely, 4.67 on the average, yet the profits on the whole capital being less than the rate of interest on the preferred capital, the dividend is crushed down below the per centage of profits. Every year, however, is bettering our condition in this respect, since our rate of interest does not increase while our profits do. Soon—perhaps in this year 1860—the per centage of profits on the whole capital will be in the United Kingdom, as in Germany, above the rate of interest paid on the preferred portion of the capital, and then having preferred capital will be an advantage to dividend instead of disadvantage as at present.

If the German 7.05 per cent. be only dividend—if it were profits on capital the dividend would be, as explained, more than 7.05 per cent.—it is very good compared with ours. In 1857 our dividend—taking Captain Galton as authority—was only 3.60 per cent. 7.05 is not very far short of double 3.60.

We have no doubt that in time our railways will pay like the German, 7 per cent. per annum, but by that time the German will doubtless yield much more than 7 per cent. The following table shows the progress they have made in this respect, so interesting in the eyes of the shareholders whatever it may be in those of the public:

On an average the capital invested in German railways realized,

	Pr. ct.		Pr. ct.
In 1834	[illegible]	In 1846	3.60
1835	2.36	1847	3.39
1836	3.64	1848	2.67
1837	2.69	1849	3.12
1838	1.95	1850	3.67
1839	2.27	1851	4.45
1840	3.60	1852	4.87
1841	3.65	1853	4.74
1842	3.88	1854	4.25
1843	4.71	1855	5.11
1844	4.17	1856	6.07
1845	3.64	1857	7.05

Time was, therefore, when even the German railways, now paying upwards of 7 per cent. per annum, paid under 2½. The steady progress of the railway dividends even in so comparatively poor a country as Germany must afford additional evidence, if any were wanting, to suffering British shareholders, that there is a good time coming, if they will only wait a little longer.—*Herapath.*

Valparaiso and Santiago Railroad.

A letter dated Valparaiso, Chili, May 2, says:—"The shareholders in the Valparaiso and Santiago Railway are called to an extraordinary meeting, to be held on the 17th inst., to consider certain terms of compromise entered into conditionally with their contractor, Verdugo, regarding an unfinished tunnel. This contractor stipulated to excavate the tunnel, of the hill or ridge of San Pedro, near Quillota, at a certain price and time, receiving pay at fixed rates per month. Disagreements arose, however, after a little. Not a stroke of work has been done for two years by the contractor, and he also refuses to give up the affair and let the company make other arrangements. Meanwhile, the ridge has to be crossed by a stationary power, drawing the freight and passengers up an inclined plane. This involves change of cars twice in thirty miles, as well as no small delay. But it is worse for the company, since they have an engine and train of cars on each side the hill, and thus, counting the engine on the summit, have three locomotives for every train that goes through that short distance. In fact, I am told the extra cost to them is not less than $3,000 or $4,000 per month, and that the income of the road from Quillota leaves no profit at all, but is just absorbed in the cost of working. Hence, as the case is and has, for twenty-four months, been in law, any one may judge the amount of vexation to which the proprietors of the road are exposed. It will be cheap at almost any rate if the contractor can be bought off, for he holds things now at a dead-lock."

Our Street Post Routes.

ORDERS FROM THE POSTMASTER-GENERAL.

POST OFFICE DEPARTMENT,
APPOINTMENT OFFICE, July 14, 1860.

SIR:—I am directed by the Postmaster-General to transmit to you the enclosed copy of an order, made this day, declaring the streets in New York city post routes, and to request you to have the same published for the information of all concerned.

As the act of 15th June, 1860, limits the carrier's fee for the delivery of letters to one cent, it becomes necessary, independently of other considerations, for the Department, in order to sustain the carrier system, to take charge of the whole business of letter carrying in New York. Therefore in promulgating the order of the Postmaster-General, you will at the same time give notice of his determination rigidly to enforce the laws against any and all private carriers or expresses in the city from and after the 1st proximo.

HORATIO KING.

Hon. JOHN A. DIX, Postmaster, New York.

POST OFFICE DEPARTMENT, July 14, 1860.

NOTICE TO NEW YORK LETTER CARRIERS.

Agreeably to the authority conferred by the tenth section of the act of Congress of 3d March, 1851, entitled "An act to reduce and modify the rates of postage in the United States, and for other purposes," it is hereby ordered that all the avenues, streets, lanes, alleys, roads and highways, in all that part of the city of New York lying south of and below 55th (Fifty-fifth) street, including that street, be and the same are hereby established as post roads. This order to take effect 1st August, 1860.

J. HOLT, *Postmaster-General.*

Journal of Railroad Law.

FAILURE TO CARRY FREIGHT IN THE USUAL TIME; LIABILITY OF COMPANY FOR, ALTHOUGH OCCASIONED BY THEIR SERVANTS WRONGFULLY REFUSING TO WORK.

The case of Blackstock *vs.* The New York and Erie Railroad Company, decided by the Court of Appeals of the State of New York, grew out of the well-remembered "strike" of the engineers of the New York and Erie Railroad Company, intended to compel the repeal of the rule making the engineers liable for running their trains off the track.

The action was brought against the defendant as a common carrier, for a delay in the carriage of a large quantity of potatoes in barrels and sacks, from Hornellsville, in Steuben County, to the city of New York. They were received by the defendant on different days in June, 1854, and would have been delivered, according to the usual course of business, within five days, but they were detained about seventeen days, and when delivered they were nearly worthless on account of the delay in their transportation. This delay was occasioned by the strike, before alluded to, in which 140 out of a total number of 168 engineers refused to work. The circumstances were as follows:

On the 15th of May, 1854, the company adopted a new rule for the government of its engineers, to the effect that they were to be thereafter accountable for running trains off the track at the switches

at any station where the trains should stop. This rule was a substitute for a former one upon the same general subject which had been found impracticable, and which had not, therefore, been enforced. The defendant used diligent efforts to procure other engineers to run his trains, but was not successful.

The case was tried before a referee, who found that the conduct of the defendant's engineers did not furnish a defence, and reported in favor of the plaintiff for $800 damages, for which judgment was entered, and affirmed by the General Term of the Superior Court, from which judgment the defendant appealed to the Court of Appeals. The following is the decision of the Appellate Court, affirming the judgment:

DENIO, J.—The position that the defendants are not responsible, because the misconduct of their servants was wilful and not negligent, cannot be sustained. The action is not brought on account of any injury done to the property by the engineers, but for an alledged non-performance of a duty, which the defendants owed to the owner of the property. If their liability to perform was occasioned by the default of persons for whose conduct they are responsible, they must answer for the consequences, without regard to the motives of those persons. In the common case of a contract for services, as for building a house, which the builder had been unable to perform, because his workmen had abandoned his service, proof that their conduct was wilful, and in every way unjustifiable, would not give the party injured an action against them, nor would it excuse the party who had made the contract. A similar point was taken in Weed *vs.* The Panama Railroad Company, where the misconduct of the defendant's servants in detaining a train of cars was active; but it was held not to furnish any answer to the action for the detention. The cases in which it has been held, that if a servant, while generally engaged in his master's business, wilfully commit a trespass, as by intentionally driving his master's carriage against the carriage of another person, the master is not liable, have no application to the present case.

It has been repeatedly held, and may be taken as settled law, that a carrier is not under the same absolute obligation to carry the goods intrusted to him in the usual time, which he is to deliver them *ultimately* at their destination. But in the absence of a legal excuse he is answerable for any delay to forward them in the time which is ordinarily required for transportation, by the kind of conveyance which he uses. In the case referred to, from Kernan's Reports, we held that where a railroad was fully equipped with engines and freight carriages; but more property was offered at a particular point than could be sent forward at once, the delay was justifiable, provided no unfair preference was given to other freight over that of the plaintiff. In the present case, the excuse arises wholly out of the misconduct of the defendant's servants, who wrongfully refused to perform their duty, and thus deprived the defendants, for the time, of the ability to send forward the property; and the question is, whether the defendants case can be separated from that of the engineers, so that it can be held that though the latter were culpable, their employers, the defendants, were without fault, and consequently not responsible to the plaintiff. This involves the consideration of the legal effect of the relations which exist between the several parties.

In the first place there was no privity between the plaintiff and the engineers. The latter owed no duty to the former which the law can recognize. If they had committed a positive tort or trespass upon the property, the owner might pass by the employers and hold them responsible, but for a nonfeasance or simple neglect of duty, they were only answerable to their employers. The maxim in such cases is *respondeat* superior. Although the nature of the contract between the railroad company and the engineers is not disclosed in the finding, it is quite improbable that it was such that the latter might throw up their employment upon two days notice without any legal cause. If it were of that character, the liability, moral as well as legal would rest upon the defendants, for in that case they would have neglected a most ordinary precaution for securing the continuous running of their trains. Assuming then, that abandoning their work was a breach of contract on the part of the engineers, they by that act became responsible to the defendants for all its direct consequences. The case therefore, is one in which the actual delinquents, through whose fault the injury was sustained, were responsible to the defendants, but were not responsible to the plaintiff. This shows the equity of the rule, which holds the master or employer answerable in such cases. Its policy is not less apparent. Those who intrust their goods to carriers have no means of ascertaining the character or disposition of their subordinate agents or servants; they have no agency in their selection, and no control over their actions. In case of a loss by the misconduct of a servant, the party injured has no means of ascertaining whether due caution was exercised by the master in employing him, or prudence in retaining him; and in the case of a controversy between the master and the servant as to which was the real delinquent, the owner of the property must, generally, be without the necessary evidence to charge the liability upon the master. The rule which the law has adopted, by which the master is held responsible for the acts of his servants, is the one best calculated to secure the observance of good faith on the part of persons intrusted with the property of others. The motive of self interest is the only one adequate to secure the highest degree of caution and vigilance by the master. The principle itself is extremely well settled.

I cannot see anything in the circumstances of the defendant to take the case out of the rule. Being a corporation, all their business must necessarily be conducted by agents, and if they are not liable for their acts and omisions, parties dealing with them have no remedy at all. A railroad corporation, is no doubt peculiarly exposed to loss from the misconduct of its engineers; and in the present case it does not appear that the slightest blame can attach to any of the superior officers of the company. Still that the property intrusted to the defendant to carry has been lost proves a failure on their part to perform the duty with which they were charged, and the only answer which they are able to make to the demand for compensation, is that the failure was caused by the misconduct of their servants. This we have seen cannot avail them as a defence. I have looked into the exceptions to the rulings of the judge upon the trial and think those rulings were in both the instances where exceptions were taken entirely correct. The judgment of the Court must be affirmed.

POWER OF GOVERNOR TO SIGN BILLS AFTER THE ADJOURNMENT OF THE LEGISLATURE.

We published in a recent number, the decision of the Special Term of the Supreme Court of New York denying the Governor of the State the power to sign bills after the adjournment of the Legislature. Although this decision has been affirmed by the General Term of the New York Supreme Court, the case has been carried to the Court of Appeals, who have held to the contrary, and we may consider the law of New York upon this point as now settled. As we understand, not yet having seen or read the decision, the power of the Governor to sign bills after the adjournment of the Legislature, is fully affirmed. As soon as we can procure the decision itself, we shall publish it in our columns.

Coal and Wood Burning on the New Jersey Railroad and Transportation Company's Railroad.

OFFICE NEW JERSEY R. R. AND TRANS. CO.,
May 26, 1860.

J. P. JACKSON, Esq., *Vice-President* and *Superintendent*:—SIR: I beg leave to submit the following report, showing the cost of fuel for the past year, and comparative economical results, between wood and coal. From an advance in the price of wood and an increase in the number of trains run, a considerable increase is exhibited in this department of expenditures over last year's report. During the year 1859, the company consumed—

4,609¼ cords, oak and hickory wood, costing $4.35		$20,070 23
8,731 cords pine wood, costing 4.61.		40,149 91
13,340¼ cords, Total first cost		$60,270 14
Add $1 per cord for transporting, sawing, &c.		13,340 25
Total		$73,560 39
Less for wood used in cars and lighting fires		2,000 00
Total		$71,560 39
Total miles run during the year		429,516
Of which was run by coal engines		66,242
Balance run by wood engines		363,274
Cost of wood per mile		$19 69

The following table exhibits the performance of our coal burning engines for the 12 months ending April 30, 1860:

Names of engines.	Cords wood.	Miles run.	Coal consum'd per mile.	Average cost of fuel per mile.
Dickinson	24¼	21,243	31.2	8.54 cts.
Zabriskie	34¾	23,795	34.7	9.95 "
Phœnix	10¼	7,727	27.8	8.24 "
Chetwood	15¼	13,374	32.8	9.45 "

66,242 miles run by coal burning engines at an average cost for fuel of $9.39 cents, which on 363,274 miles run with wood, would have effected a saving of $37,427.22, if coal burning engines could have been substituted for wood burners. But in order to arrive at safe conclusions as to economical results, the additional cost of repairs to coal burners must be taken into account. Their use has thus far been to a certain extent experimental, and most of ours, having been faulty in construction, (one of them having to be almost entirely rebuilt,) have involved a heavy expenditure, which by substituting copper for iron in fire-boxes, and other improvements which experience has suggested, may in future be avoided, and it is confidently

believed that hereafter the costs of repairs to coal burners will be little, if any, greater than to wood burners doing the same service. The following table, prepared with care, exhibits the total cost of repairs, including rebuilding and furniture, of the four coal burners now running, compared with the four last wood burners put on the road of similar class, from their construction up to the present time:

Name of Coal Engines.	Builders.	When built.	Tot. cost of rep'rs, &c.	Mil. run.	Average cost of rep'rs per mile.
Dickinson	Jersey City Loco. Co.	1856	$7,148 49	108,031	6.93 cents.
Phœnix	William Mason.	1856	7,265 05	61,486	11.82 "
Zabriskie	Do.	1858	2,365 07	62,128	4.61 "
Chetwood	Rogers Loco. & M. Co.	1859	271 26	18,374	2.03 "
			$17,449 87	239,969	Av'age per mile, 7.32.

Names of Wood Engines.	Builders.	Wh'n built.	Total cost of repairs, &c.	Miles run.	Average cost of repairs per mile.
Williamson	Danforth, Cooke & Co.	1854	$11,868 26	154,067	7.37 cents.
Vroom	Do.	1844	9,254 25	161,381	5.73 "
Southard	Rogers, Ketch. & Co.	1854	7,615 84	163,347	4.66 "
Pennington	Do.	1856	3,035 24	115,121	2.64 "
			$31,273 59	593,866	Av'age per mile, 5.26.

The coal burners are now all in good running order, while one of the wood burners in the foregoing table is in the shops undergoing repairs that will amount to $1,000, and two others of them require repairs that will amount to nearly $500 each.

But without taking this into account it appears that four of our best wood burning engines while running 593,866 miles, have cost for repairs and furniture the sum of $31,273.59, or an average of 5.26 cents per mile, while the four coal burners have cost for repairs (including almost the entire rebuilding of one of them,) the sum of $17,549.87, while running 239,969 miles, or at an average cost for repairs per mile of 7.32 cents, being 2.06 cents more per mile than for the four wood engines. This on 239,969 miles is $4,943.36 to be further charged to coal account.

The total saving thus far in fuel by the substitution of coal for wood, since the first trial on the road has been about $24,000. Deducting from this the additional cost of repairs will still leave nearly $20,000 saved to the company.

J. B. Gaddis, *General Assistant.*

Mobile and Spring Hill Railroad.

We hear from reliable authority that the contract for all the graduation, masonry, bridging and track-laying of this road, from the foot of St. Francis street to Spring Hill, has been awarded to Messrs. Ruter and Harris, of our city. These gentlemen are reliable and professional railroad men, and creditably known as such upon the Mobile and Ohio Railroad, and are besides vouched for by the best kind of security. The terms of the contract are very favorable to both parties, and the road is to be finished completely and ready for use on or before the 1st of January, 1861.

It is the intention of the Directors to use horses as motive power as far as Ann street, and from there to Spring Hill the recent improved city locomotives.

Mr. Charles T. Liernur, the engineer of the road, will start, in the early part of this week, North, to purchase the necessary rails, engines and cars. The contractors will begin their operations immediately after his return.—*Mobile Register.*

Locomotive Performance on the Baltimore and Ohio Railroad for May, 1860.

	Main Line. 1st Div'n.	2d Div'n.	3d Div'n.	4th Div'n.	Parkersburg Branch.	Washington Branch.	Whole Road.

Penn Haven and White Haven Railroad.

We are informed that this road, which will form the connecting link by rail between Wyoming Valley and the cities of Philadelphia and New York, has recently received a new impetus, and that the engineer is about locating the route with a view of the work being put under contract. It is also said that the Lehigh Coal and Navigation Company are preparing to make some important changes in their road and business the ensuing fall and winter, with a view doubtless to the early completion of the Penn Haven line. It is surprising that the canal operators and capitalists of this Valley have so long allowed this project to sleep under their neglect. Fifteen miles of railroad are all that is needed to give them a continuous outlet all the year round, for the treasures that are now locked up under the soil six months in the twelve. With a winter outlet for our coal, such as this road will make, our Valley would enjoy a degree of prosperity never hitherto known.—*Luzerne Union.*

Penobscot and Kennebec Railroad.

The annual meeting of this company was held on the 10th inst. at Bangor, Me. The fiscal year of the company closed on the 31st May. During the past year, and since December 1, 1856, this road has been run under a lease to the Androscoggin and Kennebec Railroad Company, who have sole charge of the operating department, and are required to make all necessary repairs in order to maintain the road, its buildings and equipment in a serviceable condition. The gross receipts from the joint operation of these roads were:

From 111,219 passengers	$145,784 88
" 73,168.98 tons freight	140,987 86
" mails, express, etc.	15,458 10
	$302,230 84

And the expenses were:

Repairs of track	$42,609 80	
" equipment	21,578 26	
" buildings, etc.	6,467 20	
Train expenses	12,588 00	
Station "	13,879 99	
Fuel	18,454 69	
Oil and waste	3,420 19	
Miscellaneous	11,385 28	
		130,378 41

Net earnings for the year:

Androscoggin and Kennebec Railroad Company, 4-7ths	$98,201 39	
Penobscot and Kennebec Railroad Comp'y, 3-7ths,	73,651 04	
		171,852 43

Compared with the previous year the gross earnings of both roads show an increase of $20,300 98
The expenses an increase of 5,538 60

Making the increase in net earnings $14,762 38

The increase in the net earnings of this company was $6,326 73. The report says:

The amount of $7,800 due from the company for a portion of the lands purchased of the owners of the Pier Corporation, and which matured in November last, has been adjusted by a new loan on six years, with interest semi-annually, and bonds from the owners have been taken to convey said land when the conditions thereof have been complied with by the company, and mortgages from the different owners have been given of the premises to secure the performance of the conditions of their bonds.

The amount now due for lands and docks purchased of the Pier Corporation is $45,000, which falls due in different payments from one to seven years. It is all important for the interests of the company that the principal of this debt and the interest thereon, should be promptly paid, as no conveyance of title can be obtained without so doing, and a forfeiture of the claims to this property would be extremely detrimental to the interest of the company.

Your Directors informed you in their last report that for reasons therein stated, they had omitted so pay the coupons, matured previous to that time, on the third mortgage bonds.

The maturing in April last of $20,000 of the city of Bangor bonds, and the great importance to the other bonded and stock interests, that these City bonds should be seasonably provided for, imposed upon the Directors, in view of the limited resources of the road, the necessity of passing the coupons on the Second Mortgage bonds, maturing in August, 1859, and in February, 1860.

As, for each year until 1874, the sum of $20,000 of the principal of the City bonds has to be provided for, it is not possible to determine when

the payment of coupons on other classes of the company bonds can be resumed. The payment of these and other debts, of course, depends upon the net receipts of the road, or upon some plan to be adopted before the expiration of the foreclosures, for refunding the existing liabilities.

In consequence of the non payment of the interest on the bonds referred to, the Trustees of both classes of bonds, have, upon the applications of the holders, proceeded to foreclose the respective mortgages given of your road and franchise, by publishing notices thereof in the public newspapers, as provided by law.

The time of redemption on the Thirds expires in July, 1862, and on the Seconds in Feb'y, 1863.

GENERAL STATEMENT.

Capital stock	$556,533 65
City of Bangor bonds 1st mortgage	793,000 00
Company's " 2d "	259,200 00
" " 3d "	156,600 00
Interest scrip due to stockholders	19,027 08
Bills payable and accounts	95,012 40
	$1,879,373 13
Construction, including Pier Co. lands and city lot at Bangor	$1,612,693 96
Equipment	104,019 21
Stock in P. & K. Railroad	78,014 20
City of Bangor bonds unsold	1,000 00
Bills receivable and accounts	1,868 87
Cash	1,190 24
Balance of profit and loss	80,586 65
	$1,879,373 13

The company has of 2d mortgage bonds, which are pledged for $21,353 81 of bills payable, $40,800; of 3d mortgage bonds unsold, $143,400; 360 shares of capital stock; and 779 shares of stock received for 3d mortgage bonds.

The coupons outstanding amount to $37,165; and the unsettled land damages, etc., to $5,800; to which add interest scrip bills payable, etc., as above, $114,039 48—making the floating liabilities of the company $157,004 48.

The assets consist of Bangor bond $1,000; bills receivable, etc., $1,868 87; and cash $1,190 24—making a total of $4,059 11.

The funded debt consists of the three classes of bonds above enumerated, amounting in the aggregate to $1,208,800.

The whole distance run by trains of all descriptions on both roads, during the year was 177,653 miles—being 7,784 miles more than was run during the year previous. The whole traffic of the line in passengers was equal to 3,766,544 carried one mile—of which 1,571,391 were carried on this part of the line. The freight carried has been equal to 2,356,989 tons transported one mile—of which 658,722 is this company's proportion; or 47.7 per cent. of passengers, and 28 per cent. of merchandise.

The officers of the company are:

President—HOLLIS BOWMAN.

Treasurer—ELIAS MERRILL.

Superintendent—EDWIN NOYES.

Mobile and Spring Hill Railroad.

We hear from reliable authority that the contract for all the graduation, masonry, bridging and track-laying of this road, from the foot of St. Francis street to Spring Hill, has been awarded to Messrs. It is the intention of the directors to use horses as motive power as far as Ann street, and from there to Spring Hill the recent improved city locomotives.

Mr. Charles T. Liernur, the engineer of the road, will start, in the early part of this week, North, to purchase the necessary rails, engines and cars. The contractors will begin their operations immediately after his return.—*Mobile Regist.*

Locomotive Performances on the Michigan Southern and Northern Indiana Railroad for May, 1860.

EASTERN AND NORTHERN DIVISIONS.

Length, including branches, 398 miles.

Total number of miles run	95,955
Average cost oil, waste and tallow per mile, in cents	4 73
Average cost for repairs per mile, in cents	4 63
Average cost for wood per mile, in cents	5 95
1 lb. of tallow equal to 1 pint of oil. Wood $2 75 per cord	
Pints oil used	5,160
Cords wood used	2,079
Miles run to 1 pint of oil	18.59
Miles run to 1 cord wood	46.15

WESTERN DIVISION.

Length, including branches, 129 miles.

Total number miles run	54,888
Pints oil used	2,238
Average cost for repairs per mile, in cents	6.14
Average cost for wood per mile, in cents	4.69
Cords wood used	9,373¼
1 lb. of tallow equal to 1 pint of oil. Cost of wood, $2 88 per cord.	
Miles run to 1 pint of oil	24.52
Miles run to 1 cord of wood	58.52
Average cost oil, waste and tallow per mile, in cents	61

Atlantic and Great Western Railroad.

The annual meeting of the stockholders of the Atlantic and Great Western Railroad Company was held at Ravenna, Ohio, on the 10th inst. The Board of Directors elected are as follows:

Nath'l Marsh, New York city; John Dick, Gaylord Church, Wm. Reynolds, Meadville, Pa.; Seth Hayes, Hartford, Trumbull county, O.; F. W. Seymour, Ezra B. Taylor, Ravenna, O.; Marvin Kent, Franklin Mills, O.; Peter Thatcher, Jr., James M. Coffinberry, Cleveland, O.; J. H. Chamberlin, Akron, O.; Jacob Riblet, Gallion, O.; Thos. J. S. Smith, Dayton, O.—only one change from the Board of last year. And the officers: *President*, MARVIN KENT; *Secretary*, F. W. SEYMOUR; *Treasurer*, E. P. BRAINARD.

The progress of the work is thus noticed in the report of Mr. Streator, one of the contractors:

"Mr. Streator, in his report, stated that the work was progressing as fast as it was possible, there now being sixteen hundred men actively employed in the construction of the road. Eighteen miles are now completed and in running order, from the New York and Erie Railroad to Randolph; New York. Thirty-three miles will be finished to Jamestown, New York, by the 1st of August, and sixty-three miles to the Sunbury and Erie Railroad by the middle of October.

Orders have been issued to have one thousand more hands placed upon the work west of Jamestown immediately, and it is the determination to have the road open from the New York and Erie Railroad to Akron, Ohio, by early spring. The contractors are now laying down the rail at the rate of one mile per day, and to show with what energy the work is progressing, we are privileged to say that the bridge across the Conawanga river, in New York, was erected in the short space of forty days. The bridge is one hundred and sixty feet span, of Howe's patent truss, contains over fifteen tons of iron and 400 perch of stone masonry. The masonry was completed in nine days from its commencement. Forty days since the timber in the bridge was growing in the woods. The contract for the rolling stock has been made sufficient to run the road from the New York and Erie Railroad to the Sunbury and Erie Railroad, sixty-three miles, which is expected to be ready for business by the 1st of November."

Railroads in Russia.

We copy from the *U. S. Railroad and Mining Register* the following extract from a letter dated Berlin, June 30, 1860:

The Prince Regent returned last week from a journey to the eastern extremity of the kingdom, which he had undertaken to be present at the opening of a railway from Konigsburg to Eydham, on the Russian frontier, where it is to join a branch of the great Russian railroad between St. Petersburg and Warsaw. When the latter is finished, there will be an uninterrupted communication by rail from Paris to Moscow, and from the shores of the Atlantic and the Mediterranean to the head waters of rivers that empty themselves into the Black Sea and the Caspian, and sanguine expectations are entertained of the advantages that will be derived from it, both in a commercial point of view and by the influx of travelers from the interior of Russia, though it may also facilitate the arrival of less welcome guests in the shape of long coated Russian grenadiers and bearded Cossacks. At Insterburg the Prince was met by General Gortschakoff, the Russian Governor of Poland, to whom he addressed a very complimentary speech, saying how happy he was that the bonds which had so long united his kingdom and his family with the great neighboring empire were about to be drawn still closer by the connecting link of this new international thoroughfare, and on reaching the Russian frontier he dispatched a telegraphic message of similar contents to the Czar, which, of course, was responded to in the most gracious terms. In his replies to the dutiful addresses of the provincial and civil authorities, too, his Royal Highness adverted very pointedly to his friendly relation with all the great Powers of Europe, and altogether was evidently desirous to remove the uneasy feeling that had been aroused by the warlike tone assumed by him on his recent visit to the western limits of the monarchy. In fact, nothing could present a greater contrast than the harangues pronounced by, or attributed to, the Prince Regent on these two occasions; from the former you might have imagined that Prussia was on the eve of hostilities and buckling on her armor for the fight, while the latter breathe nothing but peace and good will to all men.

Cincinnati Passenger Railroad Company.

The following gentlemen have been elected directors of this road:

President—JAMES J. ROBBINS.

Directors—E. Flint, S. S. L'Hommedieu, E. W. Woodward, Samuel N. Pike, S. W. Ely, James J. Robbins and N. Headington.

Secretary and Treasurer—S. W. ELY.

Wilmington, Charlotte and Rutherford (N. C.) Railway.

Fifty miles of track from Wilmington west, has been laid and is now being worked. It is expected that cars will be running an additional 50 miles on this division by the close of the year. On the Western Division, 4 miles of track west from Charlotte are laid, and the work, forward to Lincolnton is progressing steadily.

Sabine and Western Texas Railroad.

The section of the road from Beaumont to Orange and the Sabine, a distance of twenty-two miles, is now being pushed ahead with spirit, and it is asserted by those in charge of the work, that the road will be completed to Orange by the first of August. On the section from Liberty to Houston, a distance of thirty-nine miles, the work is also progressing, and this section will probably be completed in the early part of November.—*Liberty Gazette.*

Railroad Earnings.

The earnings of the Cleveland and Toledo road for June 1860, were $55,180
June, 1859 53,753

Increase $1,427

The earnings in June of the St. Louis, Alton and Chicago Railroad were:

Passengers $32,793 38
Freight 40,175 96
Mails and express 3,730 34

Total $76,699 68
Corresponding period in 1859 ..... 56,453 00

Increase in 1880 ..... $20,246 68

The Milwaukee and Mississippi Railroad earned in June, 1860 ..... $49,166 79
June 1859 ..... 53,382 84

Decrease $3,216 05

The earnings of the New York and New Haven Railroad Company for June, 1860, were as follows:

Passengers $63,996 82
Freight 13,000 00

Total $76,996 82
June, 1859 ..... 73,608 18

Excess in 1860 ..... $3,388 64

The receipts of the Morris Canal Co. to June 30, 1860, were $120,412 49
To July 2, 1859 ..... 110,199 73

Increase $10,212 76

The earnings of the Cleveland and Erie Railroad for June were:

June, 1860 ..... $68,649 33
June, 1859 ..... 60,580 51

Increase $8,068 82

Annexed are the details of the June earnings of the Chicago, Burlington and Quincy Railroad:

	1859.	1860.
Freight	$59,636 61	$95,984 23
Passengers	27,300 42	23,774 41
Mails and miscellaneous	2,201 47	4,976 87
Total	$89,138 50	$124,735 46
Increase		$35,596 96
Earnings per mile	557 12	779 60
Increase per mile		222 48

CHICAGO, BURLINGTON AND QUINCY R. R. LINE.

Between Chicago and Burlington, 210 miles.

	June, 1859.	June, 1860.
Freight	$67,137 36	$107,964 50
Passengers	31,808 70	27,969 90
Mails and miscellaneous	2,514 06	5,337 05
Total	$101,460 12	$141,271 45
Increase		$39,811 33

Between Galesburg and Quincy—100 miles.

Freight	$11,765 74	$12,188 92
Passengers	9,897 87	9,470 73
Mails and miscellaneous	1,258 18	882 00
Total	$22,921 79	$22,541 65
Decrease		$380 14
Aggregate for 310 m.	$124,381 91	$163,813 10
Increase		$39,431 19

The earnings of the Housatonic Railroad for June were:

June, 1860 ..... $28,687 04
June, 1859 ..... 23,507 62

Total gain $5,179 42

Total receipts for six months, ending June 30, 1860 ..... $136,213 25
Corresponding months in 1859 ..... 119,649 75

Total gain $16,563 50

The traffic of the Great Western Railway of Canada for the week ending July 6, 1860, was as follows:

Passengers $16,239 54
Freight and live stock 10,744 85
Mails and sundries 1,460 57

Total $28,444 96
Corresponding week last year 27,132 15

Increase $1,312 81

The Norwich and Worcester Railroad earned in June:

	1859.	1860.
Passengers	$10,558 47	$10,185 86
Freight	19,069 51	21,625 57
Total	$29,627 98	$31,811 43
Increase		$2,183 45

The earnings of the Dayton and Michigan Railroad for June were:

Passengers $12,004 83
Freight 20,887 67
Mails and express 1,485 98

$34,478 48

These figures show an increase over the business for May, of $2,250 17.

The following shows the earnings and expenses of the Cleveland and Mahoning Railroad for June, 1860:

Passengers $4,330 00
Freight 11,604 21
Coal 11,692 00
Mail 262 50

$27,888 77
Expenses 10,562 67

Net $17,326 10

The earnings of the Cleveland, Columbus and Cincinnati Railroad for June, this year and last, were:

June, 1860 ..... $86,423 60
June, 1859 ..... 83,396 78

Increase $3,026 82

The following are the earnings of the Great Western Railway for the week ending July 13th, 1860:

Passengers $15,958 60
Freight and live stock 10,474 35
Mails and sundries 1,298 51

Total $27,731 96
Corresponding week of last year 27,399 91

Increase $342 05

The La Crosse and Milwaukee Railroad earned in June, 1860 ..... $50,780 02
June, 1859 ..... 49,999 67

Increase in 1860 ..... $780 35

The Receiver's report of the operations of the Central Ohio Railroad for May is as follows:

Balance from last report $54,825 50
Receipts from passengers .. $19,960 91
" freight 21,611 28
" mail & expr. 3,724 91
47,297 10

$102,122 60

Disbursements including $3,192 92 carried to construction account 40,235 00

$61,887 60

Due from other roads $16,940 83
" local agents 2,674 07
19,614 90

$81,502 50

The receipts of the New Jersey Railroad and Transportation Company for the first six months of 1859 and 1860 compare as follows:

	1859.	1860.
Way lines, passengers	$231,156 91	$264,928 52
Freight	46,360 22	56,327 59
Through lines	108,192 07	108,703 66
Mails, rents, misc., etc.	93,350 81	109,367 03
Total	$479,059 57	$539,326 80

The earnings of the Hannibal and St. Joseph Railroad were for the month of

June, 1860 ..... $81,102 15
June, 1859 ..... 55,262 93

Increase $25,839 62

The receipts of the Grand Trunk Railway of Canada for the week ending July 7, were $51,754 37
Week ending July 9, 1859 ..... 39,707 94

Increase in 1860 ..... $12,046 43
Total traffic from July 1st, 1860 ..... $51,754 37
Same period last year 39,707 94

Increase $12,046 43

The earnings of the Erie Railroad for the month of June, 1860, were $393,409 79
1859 ..... 330,765 94

Increase $62,643 85

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of June, 1859 and 1860:

	1859.	1860.
EARNINGS.		
Passengers	$31,614 81	$31,938 93
Freight	25,961 64	27,768 75
Other sources	1,735 52	1,510 03
Total	$59,311 97	$61,217 71
Increase		$1,905 74

American Railroad Journal.

Saturday, July 21, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Why a Tariff is Wanted in Pennsylvania.

In an extended country like the United States there must be great diversities of resources and interests, and consequently of views in reference to legislation by which these interests are to be promoted. The political boundaries of a State not unfrequently coincide with natural boundaries or features, and its people become distinguished as the advocates of a policy reflecting their peculiar condition. The State of Pennsylvania, for example, has a soil literally teeming with iron ores and coal. In the richness and abundance of these, she outranks all her sister States. The working and mining of them naturally enjoyed the attention of her people at a very early day, and have always engrossed a large portion of their industry and capital. In the two great staples of coal and iron, Pennsylvania could supply the world, and she set about to provide means for their exportation, as if she was to have the markets of the world. She has constructed within her territory at least 3,000 miles of railroad, at a cost of $170,000,000, and more than 1,000 miles of canal at a cost exceeding $50,000,000. Of the amount invested in the former, at least $60,000,000 is unproductive; of the latter, at least $20,000,000—making an aggregate of $80,000,000 of unproductive capital in works constructed almost entirely for the transportation of coal and iron.

Similar disasters have overtaken the enterprises set on foot for the production of these two great staples. We cannot accurately measure the loss sustained thereby, as private companies make no statement of their affairs. It must be immense, and on a scale to compare with the losses sustained in the public works of the State.

Under such a state of things it is not strange that Pennsylvania should be clamorous for a rate of duties on iron and coal that should give her at least the market of the United States. It is the conviction of her people that this would put their iron mills in blast, would create an active demand for coal, and with it give an abundant traffic to their public works.

In that State protective duties are regarded almost as essential to the great interests within it, as rain is to agriculture in other States. A person must mingle with her people before the strength of this feeling can be properly appreciated, and one could hardly become one of them without fully sharing in it. With them a tariff has become a synonym for activity and prosperity in all the great branches of their industry.

New York and Norwich Steam Navigation Company.

This is the name of a new steamboat corporation recently authorized, with a capital of five hundred thousand dollars. Capt. Jos. S. Comstock, of the steamship Adriatic, has been elected President. The new organization will succeed the old Norwich and Worcester Steamboat Company, and keep up the present direct connection between this city, Norwich, Boston and the White Mountains. The new company have just completed contracts for the building of two large side-wheel passenger boats, to be over three hundred feet in length, and which, for beauty, strength and finish, are to excel anything afloat. The boats will be ready to take their place in the line early in the year 1861. The new company also propose to build two large side-wheel freight boats, to supplant the old propellers now in use on the Norwich route.

Grand Trunk Railway.

It is announced that this company will be unable to meet the interest on the ordinary bonds of the company, owing to the insufficiency of the traffic returns. It is said to be not improbable that an entire change of Directors may result from this announcement. The exact position of the delinquency seems to be this: The interest on the first preference bonds will be paid, that upon the other bonds will not.

☞ Mr. L. Flint has been appointed Superintendent of the Ohio and Mississippi Railroad, and Mr. T. D. Lovett, Engineer and Superintendent of bridges and trestles. Mr. Flint retains his position as Vice-President.

☞ Mr. Wm. H. Mitchell has been elected President of the Mobile and Girard Railroad Company, Vice J. H. Howard who declined a re-election.

☞ Dr. W. J. Hawkins, has been elected President of the Raleigh and Gaston Railroad Company Vice G. H. Wilde, who declined a re-election.

☞ Mr. Duncan A. McRae, of Cheraw, S. C., has been appointed Treasurer of the Wilmington, Charlotte and Rutherford Railroad Company.

☞ John Broadhead, President of the Camden and Atlantic Railroad, has been elected President of the Cape May and Atlantic Railroad.

☞ Mr. John Gardner, of Norwalk, Ohio, is made President *pro tem.* of the Cleveland and Toledo Road, in the absence of Mr. Waring, the President, in Europe.

Charleston and Savannah Railroad.

The Charleston *Courier* of 26th ult. says: At this time the gap to be finished is less than two miles. When this is graded the whole road-bed (with the exception of the bridge over the Savannah river) will be ironed, or ready for the iron, and there is every probability that with the exception of the bridge, as here mentioned, the entire road-bed and track will be in use by the 15th of August.

The portion of the road completed and thus in operation—from Charleston to the Savannah river, a distance of ninety miles, and six-sevenths of the entire road—has now been in use several weeks, with a daily mail and passenger service, and also with freight service. This service, in all respects, has been performed to satisfaction, and the running of the trains shows a good track, which is improving as it settles.

Pittsburg, Columbus and Cincinnati Line.

We learn from the Columbus *Journal* that a meeting was held at Coshocton, on the line of the Steubenville and Indiana Railroad on the 6th inst., at which four great routes were represented: that of the Steubenville and Indiana Railroad by Thos. L. Jewett, the Central Ohio by H. J. Jewett, the Pennsylvania Central by Thos. A. Scott, and Little Miami, by Mr. Clement. The purpose of the meeting was to consider the propriety of consolidating the earnings of the Central Ohio, and Pittsburg, Cleveland and Columbus roads, in which event the Pennsylvania Central would build a bridge across the Ohio at Steubenville, and complete the "Pan-Handle" road so as to make a direct connection with the Pennsylvania Central. The *Journal* says that the result of the meeting was satisfactory to the enterprise, and documents to that effect were signed by those present. Both the Central Ohio and the Steubenville and Indiana roads are in the hands of receivers, and an agreement of this kind for consolidation would give the road a direct energy, while the opening of the route through, by connection with the Pennsylvania Central, would double the passenger and freight traffic. Steubenville and Columbus are points common to the Central Ohio and the Steubenville lines, by the use of the river line of the Cleveland and Pittsburg road on the east and the joint use of thirty-three miles of track between Newark and Columbus on the west. The Central Ohio road cost a total of $6,810,000. Of this expenditure its rolling stock represents one million of dollars. The paid-up capital stock amounts to $1,628,000. The total of its bonded mortgage debt is $3,673,000, and its floating debt $1,126,000. The road is 137 miles in length, from Columbus to Bellaire, four miles below Wheeling. The Steubenville road is 117 miles in length. This line cost originally $4,500,000, though a balance sheet of 1860 would show a larger sum total. The large amount of two millions of dollars is represented in its paid-up capital stock; bonded indebtedness, $2,400,000; floating debt half a million.

Raleigh and Gaston Railroad.

At a recent meeting of the stockholders of this road at Raleigh, N. C., G. W. Mordecai, C. L. Hinton, S. S. Royster, and Jno. G. King were elected Directors on the part of the stockholders, and G. H. Wilder, W. J. Hawkins, and C. H. K. Taylor were announced as having been appointed by the Governor Directors on the part of the State.

Southern Pacific Railroad.

The following letter, from J. Edgar Thomson, President of the Pacific Railroad Company, has got into print in the columns of the Louisville *Journal*, which says that notwithstanding the failure of Congress, at the late session, to extend that favor and aid to the road which its friends had a right to expect, it is gratifying to be able to state that there will be no cessation of operations, but the work will be steadily pushed ahead. The letter is as follows:

Philadelphia, June 23, 1860.

Messrs. W. & H. Burkhardt:

Gentlemen: I presume it will gratify you to learn that I have closed a contract to day with Messrs. De Graff & Smith, for the graduation, cross-ties, and laying track, for fifty miles of the Southern Pacific Railroad upon terms that are satisfactory. I trust that your stockholders will not now fail to meet promptly their engagements. Prompt collections are necessary. Yours truly,

J. Edgar Thomson, President.

New York and New Haven Railroad.

The following is a comparative statement of the earnings and expenses of this road for the years ending March 31, 1858, '59 and '60:

	1858.	1859.	1860.
EARNINGS.			
Passengers	$663,149	$624,795	$711,882
Freight	138,084	157,950	171,525
Mails, express, etc.	53,761	45,946	62,727
Total	$854,994	$828,691	$964,174
EXPENSES.			
Transportation	$208,577	$198,114	$201,161
Repairs of road	102,574	76,767	106,060
Repairs of equipm't	147,976	114,285	116,770
Fuel, oil, and waste	112,230	95,181	93,844
Horse-power haulage	29,067	28,512	30,892
Total	$600,425	$512,859	$548,727
Net earnings	254,569	315,832	397,407

Deducting the interest on the funded debt, viz: $143,870, from the earnings of the past fiscal year, there would remain $253,537, or nearly 8½ per cent. on the capital stock.

Southwestern (Ga.) Railroad.

This road is now completed to Georgetown, on the Chattahoochie river, opposite Eufaula, Ala. Passengers and freight are now carried regularly to and from that point.

Chicago and Northwestern Railroad.

Efforts are being made to extend this road from Oshkosh to Appleton—the latter town issuing her bonds for $20,000 for that purpose.

Buffalo and Pittsburg Railroad.

We learn that the last judgment against this company has been satisfied, and that the road will soon be completed from the coal mines to the New York and Erie road, when the work will be promptly resumed on the old line to Buffalo. It is stated that the road has recently raised a considerable sum for the prosecution of the enterprise.

Eastern (N. H.) Railroad.

At the annual meeting of this company, held at Hampton, N. H., on the 10th inst., the following gentlemen were elected Directors for the ensuing year: Benjamin T. Reed, Robert W. Hooper, E. P. Bancroft, Boston; Wm. H. Y. Hackett, Wm. M. Shackford, Portsmouth.

At a subsequent meeting of the Directors, Mr. Reed was re elected President, Mr. Parker, Treasurer, and Mr. Drown, Clerk of the company.

Interest on Stocks, Bonds, etc.

The Delaware and Raritan Canal and Camden Amboy Railroad and Transportation Company have declared a semi annual dividend of 6 per cent. payable on the 20th of July.

The Brooklyn City Railroad has declared a dividend of 4 per cent.

The State bonds of South Carolina, issued to the Blue Ridge Railroad Company, are paid at the Bank of the State at Charleston.

The Raleigh and Gaston Railroad Company have declared a dividend of 4 per cent. out of the earnings of the part eight months.

The New Jersey Railroad and Transportation Company have declared a semi-annual dividend of 5 per cent., payable on the 1st of August.

The interest on the First Mortgage bonds of the Hudson River Co. will be paid August 1.

The interest due July 15th on the bonds of the Wyoming Canal Company will be paid on presentation of the coupon at the Bank of North America, Philadelphia.

The City of Erie and the County of Erie, Penn., are paying the interest on half a million of their bonds, issued in favor of the Sunbury and Erie Railroad Company.

The transfer books of the Minnesota Mining Company will be closed on the 25th inst., for the payment of the dividend of $6 per share, which will take place on the 1st of August.

Insurance Dividends.

The Lafayette Fire Insurance Company of Brooklyn has declared a dividend of 5 per cent. payable on demand. The Rutgers Fire Insurance Company a dividend of 7 per cent. payable Aug. 2. The Home Insurance Company a dividend of 6 per cent. payable on demand. The Resolute Fire Insurance Company a semi-annual cash dividend of 5 per cent. payable on demand; also a dividend of 33⅓ per cent. to the assured, for which scrip will be issued on the 25th inst. Also, a semi-annual cash dividend of 5 per cent. payable to the stockholders on demand. The Republic Insurance Company a semi-annual interest dividend of 3½ per cent. payable on demand. The Continental Insurance Company a dividend of 7 per cent; also a dividend of forty-five per cent. to its customers upon the premiums earned during the year, for which scrip will be issued on the 15th of September, when the interest on the outstanding scrip will be paid. The Importers' and Traders' Insurance Company a dividend of four per cent. payable on the 16th inst.

Bank Dividends.

The Bank of Mobile has declared a semi-annual dividend of 5 per cent. payable to New York stockholders at the Merchants' Bank, in New York, on demand.

At the quarterly meeting of the State Board of Directors of the Bank of the State of Indiana at Indianapolis, a semi-annual dividend of 5 per cent. was declared for all of the branches, except those located at Jeffersonville and Plymouth, the former of which divided 3 per cent. and the latter nothing.

West Jersey Railroad.

This company are waiting anxiously the action of the commissioners to enable them to begin operations. They expect in a few days to be able to commence the preparation of the road-bed.

Valuation of New York.

Relative Value of the real and personal estate in the city and county of New York, as assessed in 1859 *and* 1860.

Mississippi and Missouri River Air Line Railroad.

The work on this railroad was commenced under the Canton and Bloomfield Railroad charter, but the Company have since organized under the Mississippi and Missouri River Air Line charter, which gives liberal privileges through about ten good counties of the State of Missouri.

The work was put under contract on the 27th of March last, and the ground was broke on the 2d of April last. It has been steadily and rapidly progressing since that time, and on the 4th of July twelve miles had been graded and all the heavy work done for the first fifty miles. Eight miles of iron are now on the track, and a portion of it has been laid, making the road ready for use. In addition to this, a good twenty-ton locomotive, passenger and freight cars, etc., are all on the track, and the Mississippi and Missouri River Air Line Railroad is in operation. The company are out of debt, and have sufficient means to prosecute the enterprise in the same spirit with which they commenced. They contemplate having the road running through to the Missouri river, a distance of two hundred and fifty miles, in three years.

Wm. H. Davis is President of the Company, and Messrs. H. P. Adams & Co. are the contractors. Great credit is due to these gentlemen for the ability they have shown in pushing the work to its present state of advancement, and under their auspices we doubt not the Mississippi and Missouri River Air Line will connect the two rivers within the time they have set apart for its completion.—*St. Louis Republican.*

Revenues of the Island of Cuba.

The *Havana Gaceta*, the official paper, furnishes the following tabular statement of the receipts into the royal treasury for the first four months of the present year, as compared with the same period last year:

MARINE REVENUES (Rentas Maritimas.)	1859.	1860.
January	$ 803,939 93¾	$ 861,378 31¼
February	1,010,002 78	1,068,784 70
March	1,156,009 94	1,268,028 84¾
April	1,061,933 93¼	1,169,844 49¼
Total	$4,031,586 59	$4,363,685 35¼
Revenue of 1859		4,031,586 59
Difference in favor of 1860		$ 332,048 76¼

LAND REVENUES. (Rentas Terrestres.)		
January	$590,143 18¼	$557,161 35¼
February	508,161 12½	481,920 51
March	763,772 43¼	679,753 11
April	665,075 81	501,280 74¼
Total	$2,527,552 55	$2,220,115 71½
Revenue of 1859		2,527,552 55
Difference against 1860		$ 307,436 83½

THE TOTAL REVENUES.		
January	$1,894,183 12	$1,418,548 66½
February	1,518,163 90½	1,550,705 21
March	1,919,782 37¼	1,943,371 95
April	1,727,009 74¼	1,671,125 23½
Total	$6,559,139 14	$6,583,751 06
Revenue of 1859		6,559,139 14
Difference in favor of 1860		$ 24,611 92

The probability is now that the total receipts into the royal treasury, from both sources during the present year, will reach the enormous and unprecedented sum of twenty millions of dollars

Commerce of New York.

The tables showing the result of the foreign trade of New York for the fiscal year ending June 30, have been completed. The imports have been for the fiscal year $223,728,016 and exports $138,036,490. Of the exports, 42 per cent. was in specie and bullion. The gross imports are slightly less than for the year ending June, 1857. The comparative result of fiscal year, 1860, over the fiscal year 1859, appears to be, in brief:

An increase in imports of	$13,491,000
An increase in exports of	31,723,000
An increase of gold from California	3,852,000

The following is a recapitulation by half years:

EXPORTS.

Transit Life Insurance Company.

This company has been organized with a capital of $300,000, and a privilege of increasing to $500,000. Mr. E. W. Fiske was elected President, Mr. Guerber Vice-President, and Mr. Cummings Secretary. The proposed business of the Company is to insure against risk from railroad and other accidents incidental to traveling.

Millville and Glassboro' Railroad.

The work on this road is being pushed forward rapidly and will soon be completed to Glassboro'. Trains passed over the road on the 4th as far as Forest Grove.

THE NEW YORK CENTRAL RAILROAD COMPANY.

TREASURER'S OFFICE, Albany, July 18, 1860.

THE Transfer Books of this Company will be closed at the close of business, on Tuesday the 31st day of July instant, and will be re-opened on the morning of Wednesday the 22d day of August next.

GILBERT L. WILSON, Treasurer.

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail**, in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for $7.50.

ENGINEER'S FIELD BOOK,

By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail**, upon receipt of the price. For sale at this office. Price $1.

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will guarantee this Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.

☞ Prices exceedingly moderate. Send for a circular.

All orders and communications will receive prompt attention. Address CHARLES T. PORTER, Patentee and Manufacturer, 235 West 13th St., NEW YORK CITY.

A few reliable Agents wanted.

CEMENT ROOFING.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,
RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.
In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.

WM. N. BEACH, President,
CHAS. E. LAWRENCE, Sec'y.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 48 Pine st., New York City.
E. M. BRIGHAM, Sec'y.

HUDSON RIVER
CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.

For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government. 45

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE,** Secretary, 90 Wall st., N. Y.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Valuation of Lynn, Mass.

The total amount of taxable property in this city, at the present time, is put down at $9,649,065, which is a gain of $341,410 from last year, and 641,324 from year before last. The amount of real estate is set down at $6,291,460, which indicates a gain of $189,076 over 1859, and $362,461 over 1858. The aggregate of personal property this year, is $3,357,605, or $152,334 more than in 1859, and $278,663 more than in 1858. The number of ratable polls this year is 3,933, or 355 less than last year, and but 26 more than in 1858.

The total amount assessed in Lynn this year is $90,811.27, divided as follows: City appropriation, $80,000; State tax, $1,601.21; County tax, $5,987.67; overlay, $3,222.39. The rate of eighty-eight cents on the hundred dollars. Last year the amount assessed was $85,547, the city appropriation, $75,000, and the rate, eighty-five cents.

Wharton's Patent Turn-out for Railroads.

The object of this invention is to dispense with movable switches requiring the attention and consequent expense of switch tenders. It is quite customary for several lines of city railroads to use the same track in part, and where each line diverges from the main route a switchman is employed.

By having one line of cars use wheels with an extra tread in addition to the common tread, it is evident that by means of a short inclined supplementary rail, so placed that the extra tread shall run upon it without jar, the wheels will be gradually raised off their usual bearing, and, running on the extra tread alone, will pass over and above the ordinary track without touching it, while the line of cars provided with wheels of the ordinary form will, of course, follow the direction of the ordinary rail.

As soon as the point of divergence is passed, the short supplementary rail is discontinued, and the common rail used upon the new route also; the change of bearing from the common tread to the extra tread, and *vice versa*, is imperceptible, the cars gliding as smoothly at that point as at any other. The whole arrangement is entirely solid—the frog is cast in one piece, and there is nothing to get out of repair or to freeze up in winter. The pavement is laid flush with the inclined rail; the greatest elevation is only enough to raise the flange of the double tread wheel over the common rail, and there is nothing to interfere with the travel of carriages or other vehicles along the street.

By varying the position and diameter of the extra tread many combinations may be had, and thus a number of different lines may use the same track in common; each line of cars as they arrive at the point arranged for them, and not for the other lines, will deviate from the main route and follow their own particular course, and so in proper order will the others do.

This invention has been adopted upon the Girard College Passenger Railroad of Philadelphia, and has been in successful practical use for some months at the corners of 9th and Arch, and 10th and Arch sts.; the simplicity of the arrangement and the efficiency of its operation being entirely satisfactory in every respect.

Of course, the extra tread is only brought into use at turn-outs; where the extra rail is not placed, the double tread wheels obey the ordinary rail, and they may when desired be acted on by movable switches and be guided around curves just like any other wheels.

The cost of the double tread wheels is one dollar each more than the ordinary wheel; they are very little heavier and considerably stronger; the extra tread is not chilled and need not be more than 1¼ inch wide; by a proper disposition of metal it is probable the weight and cost would not be increased any above that of the common wheel; the frog casting costs just about the same as the tongue switches now in use; in most cases it is only needful to alter the wheels upon one side of the cars (and that of but the one line.)

With this improvement upon steam roads, it is claimed that by providing the express trains alone with double tread wheels they would proceed directly through from station to station and entirely disregard all turn-outs and branch roads however numerous, while the freight trains with ordinary wheels may be acted upon by movable switches, which, however, would have no control upon the express trains. In such case the extra rail would be continued upon exactly the same level with the main track, while the ordinary rail at that point would be gradually depressed at the required distance.

Beside the saving of wages of switch-tenders upon horse roads, which is often no small item, this improvement ensures the cars of the different lines always taking their own routes; as far as each line is concerned the other tracks do not exist.

The best switchmen are sometimes careless, and on steam roads their neglect has often led to fatal accidents.

Full information may be obtained from the inventor and patentee, WM. WHARTON, JR., No. 28 South Third st., Philadelphia.

Montgomery and West Point Railroad.

The earnings of this road for the fiscal year ending March 1, 1860, were:

From Passengers		$274,525 76
" Freight		198,630 44
" Mail		32,000 00
		$505,156 20
And the expenses were:		
For operating road	$60,544 52	
" maintaining road	82,556 68	
" " roll'g stock,	101,785 65	
		244,886 85
Net earnings		$260,269 35
Less interest paid on the debt of the company		64,308 81
Leaving a net income of		$195,960 54
Out of which two semi-annual dividends of 8 per cent. each have been paid		85,186 14
Leaving a balance of		$110,774 40

—with which the coupon bonds of the Company, for one hundred thousand dollars, due on the 1st day of May, 1860, will be paid, and as a return in part to the stockholders for the application of the earnings of the Company, to the payment of a portion of the Funded Debt, which represents a part of the cost of the road, a stock dividend of five dollars per share has been declared, thereby increasing the capital stock $71,000, at the same time that the funded debt will be paid off to the extent of one hundred thousand dollars.

Compared with the previous year, the gross earnings show an increase of $59,002 28
The working expenses an increase of 10,614 88

And the net earnings an increase of $48,387 90

Of the increase in gross earnings, $39,254 56 were derived from passengers, and $19,747 72 from freight. The number of passengers passing over the road during the year was 119,872—of which 37,883 were through, and 81,990 way. During the previous year, the number of passengers was 104,994—of which 29,168 were through, and 75,826 way. The increase of the past over the previous year was 14,878—of which 8,714 were through, and 6,164 way passengers. The report says:

It is gratifying to notice the large increase in the through travel, showing that although portions of it from the southwestern country, which at one time passed over this route, have been taken off by the completion of more convenient lines of railway, still this description of travel continues to increase with the increasing population of the country, and gives assurance that upon the completion of the lines now so rapidly progressing towards the Gulf, and the building of the projected road to Selma, so as to give to your road a connection with Vicksburg, an amount of freight and travel must be confirmed to it, which cannot be affected by any rival line.

The Alabama and Florida Railroad is completed to the 54 Mile Station, south of Montgomery. The Company have at their depot, iron to lay down track to the 65 Mile Station, to which point the Road will be opened by the first day of August. They have in Pensacola 800 tons of iron, and on the way two locomotives, and the iron work for a train of freight cars, so as to lay down track from the Florida line as soon as the Florida Company can complete their road to that point, and which they will no doubt have in operation, by the 1st day of June, as they had on the first day of April only about ten miles of track to lay—the whole of their road having been graded. Between Montgomery and the Florida line there is not exceeding four miles of road to grade, on which contractors are at work with a sufficient force to get through within this year, and we may with entire confidence rely upon the opening of the entire road between Montgomery and Pensacola by the 1st day of April, 1861.

The Mobile and Great Northern road is all under contract, and will in all probability be completed from the crossing of the Tensas river up to the point of junction with the Alabama and Florida Railroad, by the 1st day of October, 1861. So that our railroad connections with the Gulf, at both Pensacola and Mobile, will all be completed within the year 1861.

At the late session of the Legislature a very favorable charter was granted to the Western Railroad Company, to build a railroad from Montgomery to Selma. This charter has been submitted to the railroad companies east of Montgomery, and they have been urged to give such aid as will ensure its speedy construction. The Central Railroad Company of Georgia has already responded with its usual liberality, offering to subscribe $50,000 to the capital stock, and to solely guaranty the bonds of the Company for $200,000, or to make with the South Carolina Railroad Company and the Georgia Railroad Company, a joint guarantee of $500,000. It is hoped that these companies will, as soon as their directors have had time to consider the proposition made by the Central Railroad Company, promptly and favorably respond, and that by the first day of July this road, so important to the entire Eastern line, will be under contract.

The Alabama and Mississippi Rivers Railroad Company are moving with great energy in the necessary preparations for extending their road from Uniontown to Meridian, where it will connect with the Southern Railroad, which will be completed from Vicksburg to that point by October,—and if the speedy construction of the road from Montgomery to Selma is placed beyond doubt, there will be but very little delay in perfecting the Western line of railroads, so as to place Montgomery within fifteen hours of Vicksburg.

In the year 1845, the Legislature loaned to the Montgomery and West Point Railroad Company, for 10 years $116,782 64, a portion of the Two Per Cent. Fund, which loan was renewed in 1855 for five years, and it became due on the 1st day of March, 1860. By an act of the last Legislature it was loaned to the Alabama and Mississippi Rivers Railroad Company for five years to aid in the extension of their road, west of Uniontown, when it is to be paid over to the Western Railroad Company, as a bonus, provided, they complete their road to Selma by the 1st day of January, 1864. The Alabama and Mississippi Rivers Railroad Company have not yet applied for the payment of the money. They will no doubt comply with all the terms imposed by the act of the Legislature as precedent to the loan of it, and arrangements will be made by the 1st day of July, to meet the payment of the obligation of this Company.

Within this year, very considerable increase will have to be made in the stock of freight cars; three additional locomotives and not less than 1,000 tons of heavy iron provided. The flange rail on the West Point road is beginning to show too much wear to be relied on, without a through overhauling, for our heavy business, and ten miles will be at once repaired with heavy iron, so as to give sound bars of the flange rail to replace every defective bar between West Point and Notasulga. On the Columbus Branch the iron is a heavier and better rail and will do good service for some years, unless the Board should conclude to change the gauge of the road, which if done will have to be provided for by an increase of the funded debt to such an extent as may be necessary to effectively and rapidly carry out a change of so much importance to the future prosperity of the Company; and this could be best done by first relaying the whole road on which we have yet the flange rail in use with a T rail. After this has been done, the change of gauge can be very rapidly made.

The equipment of the road consists of 28 locomotives; 11 first-class, and 3 second-class passenger cars; 10 baggage and mail, 106 box, 87 platform, and 80 for gravel, wood, dumping, repairing, etc.

The following is the Company's balance sheet showing its financial condition March 1, 1860:

LIABILITIES.

Share capital		$1,419,769
State of Alabama		122,622
Coupon Bonds, 1860	$100,000

Journal of Railroad Law.

WHEN THE ORGANIZATION OF A RAILROAD COMPANY DEEMED SUFFICIENT IN STATE OF INDIANA; DEFENCE OF MISREPRESENTATION IN REGARD TO LOCATION OF ROAD NOT ALLOWED IN SUIT FOR AMOUNT OF SUBSCRIPTION TO STOCK.

The law does not always demand a literal compliance with its terms, notwithstanding the technical quibbles which sometimes appear to defeat the ends of justice, may have induced an opinion to the contrary of this proposition. It requires simply a substantial compliance with its provisions. This truth is illustrated in the case now under consideration.

The Logansport and Northern Indiana Railroad Company sued one Eakright for an amonnt due upon a subscription to its capital stock. The statute of the State of Indiana under which this Company was organized, contains these provisions:

" Whenever stock to at least $50,000, or $1,000 for each and every mile of the proposed road shall have been subscribed, the subscribers to such stock shall elect directors for such company from their own number, and shall severally subscribe articles of association, which shall set forth the name of the corporation, the amount of the capital stock of the company; the number of shares of which said stock shall consist; the number of directors and their names, to manage the affairs of the company; the name of the place from which,

and the place to which, the proposed road is to be constructed; and each county into which, or through which, it is intended to pass, and its length as near as may be. Each subscriber to such articles of association shall state his place of residence, and the number of shares taken by him in such company."

The articles of association of the company were as follows:

We the undersigned, whose names and places of residence are designated in the margin, for the purpose of organizing a company, to construct, own and maintain a railroad hereafter mentioned, in pursuance of an act entitled 'an act to provide for the incorporation of railroad companies,' approved May 11, 1852, do hereby, each for himself, subscribe the number of shares in the capital stock of said contemplated railroad company set opposite our respective names, such subscription payable to said company as the board of directors, when elected, may from time to time direct. And we hereby subscribe and agree to the following articles of association, viz:

Article 1. The name and style of the corporation shall be, 'The Logansport and Northern Indiana Railroad Company. 2d. The capital stock of the company shall be 800,000 dollars, to consist of 16,000 shares of 50 dollars each. 3d. The railroad shall commence at the west, or such point on the west line of *De Kalb* county, with a view of connecting with the present *Auburn and Eel River Valley Railroad*, at such point as may be agreed on by the companies so connecting; thence running down *Eel* river valley to *Logansport*, passing through the counties of *Noble, Allen, Whitley, Kosciusko, Wabash, Miami* and *Cass*. 4th. The number of directors shall be seven. 5th. The length of the road will be probably, seventy-five miles. In witness thereof, we have hereto severally set our names as parties to the above articles and subscribed to the capital stock of said company.

Eakright defended on the ground first, that the complaint was defective, inasmuch as it did not show a subscription of stock, and an election of directors, *preliminary* to the construction of the articles of association; that the articles themselves did not set forth the names of the directors, nor did they show distinctly the name of the place from which the proposed road was to be constructed; second on the ground that the company represented to him that the road would be constructed near his land, and on this representation he subscribed to the stock of the company; but that the road was not so constructed and that the chief inducement for his subscription had therefore failed.

Upon the case, as we have briefly stated it, the Supreme Court of Indiana, to which the cause was appealed, affirmed the decision of the lower tribunal, which was in favor of the plaintiffs. The following is so much of the opinion as bears upon the questions stated:

DAVISON, J.—As we have seen, the statute says' that whenever stock to at least $50,000, etc., shall have been subscribed, the subscribers shall elect directors, etc., and shall severally subscribe articles of association, etc., which articles shall set forth the number of directors, and their names, etc. This seems to contemplate certain steps to be taken by the subscribers, before they construct the articles of association; but it seems to us that a *substantial compliance with the statute is sufficient.* If, in the proceedings to organize such company, from its commencement to its completion, all the requirements of the statute have been observed, though not in the order which it prescribes, such organization may, in our opinion, be deemed sufficient. Here the directors are not named in the articles of association; but it appears that they were elected at a meeting of the subscribers, after the stock was subscribed and the articles were constructed; and further, at the same meeting at which they were elected the same articles of association were expressly adopted by the subscribers. Indeed all the requirements of the statute in this instance have been literally pursued, save that of naming the directors in the articles of association, and that, it seems to us, has in effect been done by the adoption of the articles when the directors were elected. At all events, the requirement that they be named in the articles, may be held merely directory, and not in view of the facts stated in the complaint, essential to the validity of the corporation. Moreover, there is an authority which, in effect, decides that the fact of an illegal election of directors cannot be set up in resistance of the payment of stock, but would be a case for a *quo warranto*, to oust the illegally elected directors.

The third ground of objection to the complaint, viz: that the articles of association do not show distinctly the name of the place from which the proposed road is to be constructed, is untenable; because the statute simply requires the name of such place to be set forth. This must be done with some degree of certainty. In our opinion, the articles on their face show that this requirement of the statute has been properly complied with.

The second paragraph of defendant's answer alleges—"That at the time the defendant made the subscription, a random line of the contemplated railroad had been run, which passed through a corner of his land, situated on north side of Eel river, which land adjoined the town of *Mount Vernon*, in Miami County; that said line ran parallel with said river, and one mile distant therefrom; that defendant resides on said land, and was anxious for the construction of a railroad, running on the north side of that river, and through or near his land; that he was induced to sign the subscription by the agents of the contemplated road, who represented to him, and caused him to believe, that said random line, so run, would be the permanent line of the road; or if the same should be changed, that it would, in any and every event, run north of said river, and near to the town of Mount Vernon, against which defendant's land abuts. And he avers that the consideration of his subscription was the location of said road north of Eel river, agreeably to the agent's representations. And, further, he avers that the company, since their organization, located their road south of Eel river, at least two miles from his land, which location defeats the whole object of the defendant in making the subscription," * *

At the proper time the defendant moved thus to instruct the jury:

"If the subscription was obtained under the inducements and representations stated in the second paragraph of the answer; and the company have not located their road in conformity with such representations, but, on the contrary, have so located it as wholly to defeat the object of the defendant in subscribing, and in direct opposition to the representations on which the subscription was obtained, the jury should find for the defendant."

This instruction the court refused, and the defendant excepted.

Upon the enquiry thus presented, a late writer on railroad law says, that "a provision as to the location, so as to be binding upon the company, and render the subscription conditional, must be inserted in the agreement;" that "a subscriber cannot defend a suit for calls by parol proof, that he should not have become a party to the agreement, unless he had supposed a particular route would have been adopted;" and that "the representations of a class of officers with whom the power of location is not lodged, will not bind the company." And "even the representations of those who have such power are mere matters of opinion on which he has no right to rely." Pierce on Am. Railroad Law, 72, 73. This exposition is supported by authority, and has been followed by this court.

In the case before us, the subscription being absolute on its face, verbal proof of the facts alleged in the second defence should not be allowed to bar the action; because, according to the legal effect of the instrument which the defendant subscribed, the entire consideration for his promise was four shares of stock in the company; and, consequently, the representations of the agent must be held mere expressions of opinion, upon which the defendant had no right to rely. The judgment is affirmed.

Cincinnati, Peru and Chicago Railroad.

This road was commenced in 1854. The object of the parties engaged in the enterprise was to connect the Indianapolis and Peru road—the last rails on which were then being laid—with the Michigan Southern and Northern Indiana (Toledo and Chicago), road at Laporte, which would connect Chicago with this city by a line twenty miles shorter than was then or is now—in 1860—in operation. It is not, however, upon the possible *through* transportation of freights and passengers that the builders of this line based there expectations of net revenues—they looked then and look now mainly to the local traffic from several counties in Northern Indiana, not developed by railways in any part. The country through which the Cincinnati, Peru and Chicago road passes, is probably not equalled in the amount of undeveloped wealth of soil and timber, and not excelled in Indiana in its already developed agricultural and grazing production. The distance from this city to Peru, via the Indianapolis and Cincinnati and the Indianapolis and Peru roads, is 184 miles; from Peru to Laporte Junction with the Great Michigan Southern Road, is 70 miles; from Laporte to Chicago, by the Michigan Southern Road, is 58 miles. From Laporte, this way, the Cincinnati, Peru and Chicago Road is finished, and in operation for thirty miles, that being the distance between Laporte and Plymouth. The only link remaining unfinished in this new line between the Ohio river at Cincinnati, and Lake Michigan at Chicago, is between Peru and Plymouth, a distance of 40 miles; on this part of the line the grading is partly done, there having been already expended over one hundred thousand dollars in that department. The people of Marshall and Fulton—two very rich counties—are making efforts to fill up this gap, that they may have an outlet for their grain, cattle, and immense forest production. If the iron chairs and spikes can be obtained in any way, the citizens of the counties named will complete the graduation and masonry for the road bed, and lay down the rails at their own cost, so that there will not be a dollar of debt on the road, except for

the iron spikes and chairs. The effort now to be made is to induce the connecting roads to assist in purchasing the iron.—*Cincinnati Commercial.*

Alabama and Tennessee River Railroad.

The gross earnings of this road for the fiscal years ending May 31, 1859 and 1860, were:

	1859.	1860.
From passengers	$38,084 85	$45,915 59
" up freights	31,813 00	56,386 23
" down freights	74,442 90	93,729 15
" mails	10,221 45	11,595 00
" sundries	1,066 59	
	$155,628 83	$207,625 97
Expenses	76,721 40	96,393 56
Net earnings	$78,907 43	$111,232 41

A comparison of the gross earnings of the past with those of the preceding year, show an increase in 1860 of $51,997 14
With an increase in expenses of..... 19,672 16

Making the increase in net earnings.. $32,324 98

The road was opened for regular business to Talladega, 109.56 miles from Selma, on the 29th of September last—making an addition to the track in operation of 10.56 miles since May 31, 1859. The average length of road in operation during the year was 106 miles.

The following statement will show a gradual increase in the earnings of the road for each year since July 1, 1852:

Year ending July 1,		1853	$32,268 18
do.	do.	1854	82,535 91
do.	do.	1855	71,566 59
do.	do.	1856	75,228 80
11 mos. end. June 1,		1857	87,312 86
Year ending	do.	1858	113,151 82
do.	do.	1859	155,628 83
do.	do.	1860	207,625 97

According to the Treasurer's statement, the receipts from all sources during the year were $357,933.86; and the disbursements, $328,743.11—leaving a balance on hand of cash and bills receivable of $29,190.75. The receipts from all sources since the organization of the company to the close of the past fiscal year were $2,476,023.06; and the disbursements, $2,446,832.31.

The Legislature of Alabama, at its last session, passed an act loaning to this company $225,000, a portion of the Three per cent. fund, for five years, at the rate of six per cent. per annum. Of this amount, $172,000 has already been received in the six per cent. bonds of the States of Virginia and North Carolina; and the company have assurances that the remainder, amounting to $53,000, will be paid to them in cash in October next, in time to meet the payment for iron rails. Subsequently, the city of Selma, for the purpose of aiding in the extension of the road to Gadsden, made a subscription to the capital stock of the company, to the amount of $100,000, in addition to her previous subscription, payable in the bonds of the city, and which she is now ready to issue.

Thus encouraged, the Directors resolved at once to commence the construction of the entire road. A contract was accordingly concluded with Messrs. John Rogerson & Co., of New Castle, England, to supply all the rails, chairs and spikes, to clothe the road from Talladega to Gadsden.

The iron is to be delivered in the Bay of Mobile, freight, insurance and duty paid, at $54 per ton—payable in equal proportions of cash and bonds; one half of the bonds to be City of Selma bonds at par. The iron for the road from Talladega to Jacksonville is to be shipped in August, September and October, and the balance in April and May next.

A contract has also been closed for the graduation, masonry, bridging, and track-laying from Talladega to Jacksonville, to be completed by the 1st of February; and to the east bank of the Coosa river, near Gadsden, by Oct. 1, 1861.

The estimated cost of the entire road from Talladega to Gadsden is about $572,750. To meet this, the company have ample securities on hand, provided they can be negotiated at such rates as are fair and reasonable. The means on hand and available are as follows:

The loan from the State	$225,000
The 1st mortgage bonds of the company.	250,000
City of Selma bonds, new issue	100,000
do. do. old issue	11,000
Second mortgage bonds of Company	18,500
Total	$604,500

The loan from the State can be realized with great certainty. The bonds of the city of Selma and the company amount to $379,500—one half of these will be taken under the contracts, the other half, $189,750, the Board confidently believe can be disposed of, to the friends of the road, by the time the money is required.

The earnings of the road, and the land grant from Congress of 425,132 acres of land, is not taken into the calculation. The earnings of the road are required for other purposes, and the land grant has been set aside as security for the loan from the State.

In the last annual report it was made known to the shareholders, that the land grant under the act of Congress of the 3d of June, 1856, made to this company, had in part been adjusted, and titles to 413,778 acres of land had been issued and delivered to the Governor of the State for the benefit of the company. In addition to this, the General Government has recently adjusted and has issued titles to 11,353 acres more land, and delivered the same to the Governor for the use of the company; which increases the number of acres of land to 425,132 acres. Under the same act of Congress the company is entitled to more lands. That portion that comes in conflict with the grant to the N. E. & S. W. R. R. and the Tenn. & Ala. Central Railroad is left unadjusted, which embraces a large amount of the coal measures and iron mines in Shelby and Bibb.

In reference to the relations of this road to the numerous connecting lines, we copy the following from the report:

RAILROAD CONNECTIONS.

The stockholders are apprised, at Gadsden on the Coosa river, the terminus of your road, the Tenn. & Coosa R. R. sets in, which is an extension of your road, and connects North and South Alabama at Gunter's Landing, at the south bend of the Tennessee river. From Gadsden to Gunter's Landing, is 36½ miles. This distance, we are informed, by the President of the company, is all graded except ten miles, which is let to contract, and there are now over 350 hands at works on that portion not finished. At Gunter's Landing, the Winchester and Ala. R. R. sets in, which is a further extension of your line of road, and crosses the Memphis and Charleston R. R. near Brownsborough, and connects with the Nashville and Chattanooga R. R. at Deckard.

The Winchester and Alabama R. R. is finished to the Ala. and Tenn. line, 25¾ miles, and in daily operation; from that line to Gunter's Landing is 43 miles, which is not yet let to contract, but we are informed will be in a short time. The completion of this line of railway will place you in connection with the Tenn. river, which is navigable to Decatur and Chattanooga, with the Memphis and Charleston R. R., the Nashville and Chattanooga R. R., and with other lines extending West to Louisville, Cincinnati and the Great Lakes.

Near Gadsden the Wills Valley R. R. connects Chattanooga with your road—this road is in progress and the President thinks will be finished by the time your road reaches Gadsden. On the east side of the Lookout Mountain the Coosa and Chattanooga R. R. is located, and will connect your road with the Georgia and East Tennessee road, near House's Camp Ground. This road has been let to contract, over twelve months, to the Alabama line.

A road from Rome, Ga., is now in progress, to connect with your road at Gadsden—12 or 13 miles is let to contract and is now being graded. Another and very important railroad, called the Dalton and Jacksonville Railroad, is in active progress. This road proposes to connect your road, at Jacksonville, with the Ga. & East Tenn. R. R. at Dalton—this road has been surveyed and located, and will cross the Coosa river about nine miles below Rome. It is let to contract in part, and is now being graded this side of Dalton and in Vans Valley. Also a road is projected from Marietta, Ga., to tap your road at Jacksonville.

A road from Atlanta, Ga., to Jacksonville, called the Georgia Western Railroad, has a charter in this State to Jacksonville, and is in active progress; the company has been organized and has obtained a subscription of about $1,000,000 to commence on, and is now being surveyed and located.

And there is another, called the Savannah, Griffin and North Ala. R. R., which is projected from Griffin, Ga., and proposes to connect with your road at Oxford or Jacksonville, and has a charter to connect with Decatur on the Memphis & Charleston R. R. This company has commenced work vigorously; has 36 miles graded from Griffin to Newman, and expects to have it in running operation by the first of January next.

Here are eight railroad companies proposing to connect directly with the northern portion of your road at Oxford, Jacksonville and Gadsden. These roads all have merits, and the most of them will be built, which, beyond the possibility of a doubt, will open up to your road the most invaluable scope of country, and place your road in connection with all the important lines of road North, East and West.

In addition to this, your Southern and Southwestern connections have, for some time past, engrossed quite a large share of public attention. The Selma and Gulf Railroad, which connects your road with the Gulf at Mobile and Pensacola, has been located to the Florida line, and will connect with the Pensacola road at that place, which is finished from Pensacola to the Alabama Line. It will also connect with the Mobile and Great Northern road at some point not yet ascertained, between Selma and Mobile.

The Selma and Gulf road is progressing well; has fifty miles let to contract, which is being graded, and the iron purchased to clothe the road forty-three miles. The Mobile and Great Northern road is under contract and the grading progressing and iron purchased to finish it. The southern extension of your road to the Gulf, at Mobile and Pensacola, will be of immense advantage to your road. From the Gulf, over the Ala. & Tenn. Riv. R. R. to Washington City, when the connections are made, will be the shortest route by many miles over any route now in operation or projected.

From Selma, West, your road connects with the Ala. & Miss. Rivers R. R. This road is finished to Uniontown, 30 miles west of Selma, and active steps are now being taken to extend the road to the Mobile & Ohio R. R. at Meridian, which at that place connects with the Miss. Southern road, which is very nearly finished from the Mobile & Ohio R. R. to Vicksburg. This will be a very valuable connection to your road, both for freight and travel. In view of the importance of your

road and its connections, application has been made to the Directors to aid in the extension of your line of road to North Ala. and Winchester, Tenn. This extension, and the connection with the Ga. & East Tenn. Railroad, is deemed to be of the greatest importance; so much so, it is the opinion of all well posted men, that this company should take every step in its power to accomplish and obtain these connections.

When your road is finished, it will be in the power of this company to give material aid to these important extensions and connections.

Your Directory, therefore, would most respectfully recommend to the stockholders the propriety of clothing the Board with power and authority to give such aid as may be in the power of the company—having for its object the assistance of other companies, in the extension of the line of roads, and securing these great connections.

The Board is gratified, in calling your attention to an act of the Legislature, approved 25th day of February, 1860, which donates to this company a small portion of the two per cent. fund. The first section of the act instructs the Centroller of the State to collect nine thousand four hundred and seventy-seven dollars and forty-seven cents, loaned to the Marengo Plank Road Company, on the 13th day of December, 1853, under the provisions of an act passed on the 9th day of February, 1850. The second section of the act loans the sum collected from the Marengo Plank Road Company, to the Alabama and Mississippi Rivers R. R. Company, until the 13th day of December, 1863, at five per cent. per annum, and the act further declares "at the expiration of the loan herein made to the Alabama and Mississippi Rivers R. R. Company, the said sum, with interest accruing thereon, is hereby donated to the Alabama and Tennessee River R. R. Company." For this favor, we tender to the members of the Legislature our grateful acknowledgements.

The Board have taken steps to increase the rolling stock on the road. Two large locomotives for freighting purposes, and twenty-five freight cars have been ordered for the next winter's business.

The financial condition of the company at the close of the fiscal year, was as follows:

GENERAL STATEMENT.

Individual stock		$734,472 99
City of Selma bonds		72,891 85
State of Alabama 2 and 3 per ct. fund		259,641 04
		$1,067,005 88
First mortgage bonds	$548,922 27	
Sec'd do. first series.	181,050 00	
Sec'd do. sec'd series	47,804 49	
		777,776 76
Interest		28,701 73
Net proceeds from transportation		358,365 44
Miscellaneous sources		31,622 72
Bills payable		211,783 72
Cotton account		766 81
		$2,476,023 06
Rolling stock		$184,905 81

Rebuilding Coosa Bridge		18,829 36
Miscellaneous		16,793 89
Cash and bills receivable on hand		29,190 75
		$2,476,023 06

President, THOMAS A WALKER.

Directors, John W. Lapsley, Charles Lewis, George C. Phillips, P. J. Weaver, Walker Reynolds, W. B. McClelland, W. L. Terry, E. T. Watts, B. C. Wyley.

Ch. Engineer & Gen. Supt., WM. ROTHROCK.

Secretary and *Treasurer*, A. M. GOODWIN.

Baton Rouge, Grosse Tete and Red River Railroad.

The Pointe Coupee *Democrat* publishes a letter from a director of the company, from which we extract the following:

We have graded eight miles of the extension. Our aim is to finish twelve miles of grading by the 1st of September, and we hope to have the iron laid and locomotive running by the 1st of January or February; then to commence grading the remaining twelve and a half miles to the Atchafalaya, which we wish to complete in six or eight months after. This certainly shows a determination in the Board to progress rapidly, and is the only course by which it can receive encouragement from new stockholders, who may be induced to subscribe liberally, and thereby supply the balance of the means necessary to comple the work; also to insure its connection with the Red River portion of the road.

Flint and Pere Marquette Railroad.

At a recent meeting of the stockholders of this road, the old Board of Directors were re-elected, with the exception of Mr. Goodwin and E. H. Hazelton, whose places were filled by the election of E. B. Ward and C. A. Trowbringe, of Detroit. The following officers were elected by the Directors:

President—EBER B. WARD.
Vice-President—G. M. DAY.
Treasurer—A. W. CROSSMAN.
Secretary—MORGAN L. DRAKE.

In a few days the contractors will begin to lay the iron, and lay half a mile a day, until thirty-three miles are completed. On the completion of the first twenty miles, the Company will be entitled to the grant of 120 acres of land.—*Detroit Tribune.*

The Lake Shore Depots.

The case of the heirs of the Connecticut Land Company against the Cleveland and Columbus and Lake Shore Railroads, involving the title to the lands now occupied by these Companies as depot grounds at Cleveland, which has been pending in the United States District Court for several years, has just been decided by Judge McLane in favor of the Railroad Companies. In this decision many historical facts of great interest are detailed; touching the conduct of the Connecticut Land Company and of the City of Cleveland, regarding the land in question. This great Land Company received its title to the Western Reserve, about three millions of acres, from Connecticut in 1795, when it organized for the purpose of extinguishing the Indian title to the lands, causing a complete survey of them, and a division among the shareholders. We copy from the Cleveland *Plaindealer* the following facts in relation to this property, now worth several millions of dollars:

"The Connecticut Land Company commenced the surveys in 1794, and the plat of the village of Cleveland was made by Seth Pease and Augustus Porter, in 1796. This plat was retraced in 1802, by Amos Spatford. The south line of Bath street, running from Water street to the river, was clearly shown on their maps. The dedication of the street to public use is undoubted. The original map, which by the territorial laws of Ohio, passed in 1802, was required to be filed and recorded, was lost. The Connecticut Land Company, having completed the work for which it was organized, and divided all its lands, closed its affairs in 1809. It divided all the property known to be owned by it, and abandoned further ownership and control as a company, of the lands in dispute. Bath street was a narrow strip of beach sand in that day. The opening of the harbor, and the building of the government piers have caused a large accretion to that and adjacent lands. In 1842, the city, by authority of the State statute, leased lands and wharves lying on the river and lake, where streets came to the water edge. In 1845, they laid out and leased lands on the beach of the lake north of the north line of Bath street. In 1849, the city gave the C. C. & C. R. R. Co. a conveyance of the lands in dispute to be used for railroad purposes, and by piling and filling up these lands they have been largely increased, not less than half a million of dollars having been expended in improvements upon the piers and depots.

More than half a century has elapsed since the abandonment, by the Connecticut Land Company, of its rights to these lands. Its articles of association were for temporary purposes only, and when its closed its affairs in 1809, the Court believes that, from the accuracy with which its business was conducted, and the exactness with which the remnants of its property were divided, that it was no careless or ignorant omission by which the land in dispute was not disposed of, except by dedication to the public. If it had any existence, it was deemed worthless, and was abandoned totally to any who might appropriate it.

The time which has elapsed, renders the claim of the complainants a stale one, under all the circumstances of the case, a claim not to be encouraged by a Court of Equity. The Court, therefore, dismissed the bill.

Receipts of Coal at Cleveland.

For the six months ending July 1st, the receipts of coal at Cleveland have been as follows: In 1857, 138,074 tons; in 1858, 79,566 tons; in 1859, 89,-173 tons; in 1860, 143,323 tons. The amount shipped by lake this year to July 1st, was 48,367 tons.

Polk Slate Quarry Railroad.

A correspondent of the Augusta (Ga.) *Chronicle* writing from Paulding County, says: "Our citizens are very much elated at the idea of getting a road through this section of country. The Polk Slate Quarry Railroad has been surveyed, and I understand that twelve miles of the road from Marietta will be let out for grading in a few weeks.

New Orleans, Jackson and Great Northern Railroad.

We have seen a letter addressed to one of the Directors, from the President of this company, containing the gratifying news of the purchase of 4,000 tons of iron rail, 3,000 of which is to be used in the construction of the road between this place and the city of Aberdeen.

The road north of Canton, will be pushed forward as rapidly as possible, and at the same time all necessary repairs and improvements to roadbeds and way stations south of Canton will be made, to secure the comfort of passengers and the fast transportation of freight.—*Canton Citizen.*

Tennessee and Coosa Railroad.

We understand that the case of the Tennessee and Coosa Railroad Company *vs.* the Governor, has been decided by the Supreme Court in favor of the Railroad Company. The case was an application for a Mandamus to compel the Governor to draw his warrant on the Treasurer of the State for $150,000, balance of the three per cent. fund loaned to the Railroad Company by an act of the Legislature of 1854. The Governor set up in his return to the rule against him, that the Railroad Company had not complied with certain conditions imposed by an act of the Legislature of 24th of February, 1860.

The Court held that the latter act, so for as it conflicted with the provisions of the former, was unconstitutional and void, and directed that the mandamus should issue, reversing the decision of the Circuit Court of Dallas, which had overruled the motion for a mandamus.

This decision will insure the early completion of the Railroad from Gadsden to Guntersville. By this route we may look soon for railway connection between the Tennessee River and the Mobile Bay. —*Selma Sentinel.*

Philadelphia and Baltimore Central R. R.

We alluded two or three weeks since to a proposition which had been made to this company at their meeting at Avondale on the 30th ult., by S. M. Felton Esq., President of the Philadelphia, Wilmington and Baltimore Railroad Company, and others, to lease and finish their road. At an adjourned meeting held at the same place on the 7th inst., the Committee to whom was assigned the duty of receiving proposals, reported that no other proposition had been made. The proposition of Mr. Felton was then read. The substance of which is as follows:

They agree to take $300,000 of the first mortgage bonds of the company (whole issue $800,000) at 60 per cent. The $180,000 to be paid at such times as may be arranged by the parties—$155,000 to be used in paying the floating debts of the company and completing the road to Oxford. $25,000 to be expended in rolling stock. A lease to be given to them covering all the rolling stock, rights and titles for twenty years, with the privilege of extending it for twenty years more. They to pay to B. C. R. Co., the whole of the net earnings until it pays the debt on the bonds to the amount of $700,000, and when the road reaches the Susquehanna on whatever bonds are issued in completing the road. None of the bonds to be sold for less than 75 per cent.

The toll sheets to be arranged by the officers of both companies. The net profits are after the running expenses and repairs are deducted from the gross earnings. The net profits should be 30 per cent. of the receipts.

The interest on the $300,000 of the bonds taken by them to be paid the same as upon the others.

But $700,000 of the bonds to be issued in completing the road to Oxford, and $800,000 when it reaches the Susquehanna.

No more money to be furnished the Philadelphia and Baltimore Central by the Philadelphia, Wilmington and Baltimore Company after the first $180,000.

The following basis for a new company to construct and operate the road for the benefit of the stock and bondholders was then submitted. The substance of this proposition is:

One thousand shares to be issued at $100 per share. Each share to have a vote in the election of officers and other matters.

This company to furnish the cash to complete the road and assume all the floating debts. They will finish the road to Oxford by the first of October. For the cost of the rolling stock and other improvements they are to take the bonds of the company at 70 per cent. A lease of the road to be given for 15 years.

The rolling stock and equipments of the road are to be deducted from the gross earnings of the road. Twenty per cent. of the net proceeds to be paid to these stockholders, after which the balance is to pro-rate with the bondholders till the interest is paid, and then the rest to go to the original stockholders.

After a spirited discussion by the friends of both plans, the meeting adjourned to the 21st inst. The State of Maryland has appropriated $30,000 towards building the road within her borders.

Memphis and Little Rock Railroad.

Mr. George Peabody, the London Banker, through his agent in Memphis, has contracted to furnish eight thousand tons of iron for this road; a quantity sufficient, it is thought, for its completion. The shipments of iron will be commenced as soon as an order can reach the contractor.

Ship Island (Miss.) Railroad.

The Jackson *Mississippian* of 10th inst. says that $30,000 were subscribed to the stock of the Gulf and Ship Island Railroad, at the barbecue at Spear's Mills, near Brandon, the 4th inst.

Fremont and Indiana Railroad.

The following gentlemen have been elected directors of this road for the ensuing year:

President—L. Q. Rawson.

Directors—L. Q. Rawson, C. W. Foster, James Moore, D. J. Corey, S. Carlin, R. W. Sterns and R. W. B. McLellan.

Treasurer—R. W. B. McLellan.

Illinois Central Railroad.

The following notice has been issued by the Illinois Central Company:

New York, July 21, 1860.

The Illinois Central Railroad Company is prepared to pay $400,000 of its Freeland bonds, with the accrued interest to the date of presentation.

E. A. Burnside, Treasurer.

Texas Central Railroad.

The Galveston *News* says that the receipts of this road are augmenting at an extraordinary rate. For several months they have doubled the receipts of the past year, with only about twenty miles of road extended. The President has been compelled to purchase a large number of additional freight cars.

Baltimore and Ohio Railroad.

We learn from the Baltimore *American* that the suit pending against this company in the City Circuit Court in relation to the extra dividend, was dismissed on the 18th inst., by consent of the respective counsel; and that in consequence of the settlement of the suit, $189,000 were immediately paid over to the City Register, on account of the city of Baltimore, that being the amount to which the city was entitled. The following resolution, recently passed by the First Branch of the City Council, will explain the course pursued by the city:

Whereas, In the year 1856 the Baltimore and Ohio Railroad Company declared an extra dividend in the bonds of said company, convertible into stock within a period of five years—said bonds being intended to represent the surplus earnings of said road, which had been appropriated from year to year, for a long period of time, towards the permanent increase of the capital of said road; and whereas, in the then condition of the company's affairs, the Mayor and City Council of Baltimore deemed it unwise to declare said extra dividend in bonds requiring an annual provision for the interest, whether earned or not, and before the safety of the road was fully manifest; and whereas, it appears from an assurance given to the City Council, endorsed by the unanimous vote of the President and Directors of said Railroad Company, representing State, city and individual stockholders, that said company is in a condition to make such dividend at this time, without risk of danger to the road; and whereas, the city of Baltimore wish to avoid all factious opposition to the action of said Baltimore and Ohio Railroad Company, and as said company is represented as now in possession of a large amount of surplus revenue, applicable to the accrued interest upon said bonds, which they are ready to pay over to the State, city and stockholders upon the removal of legal impediments; therefore

Resolved, by the Mayor and City Council of Baltimore, That the counsel of the city having charge of the suit laying an injunction upon the 30 per cent. or extra dividend of the Baltimore and Ohio Railroad Company be, and they are hereby vested with full authority to dispose of said suit and injunction as may be most expedient and proper; provided, that in case said suit be settled, the Baltimore and Ohio Railroad Company shall pay all the costs accrued and to accrue since the argument of the cause heretofore had in the Court of Appeals.

The suit on the part of the State, being an attachment against the company to answer for contempt in an alleged violation of an injunction issued by the court in relation to the extra dividend, was also withdrawn.

The Kieff Suspension Bridge.

The greatest of all suspension bridges in extent—over the Dnieper river in Prussia, Chas. Vignoles, engineer, was begun September 9th, 1848, and finished October 10, 1853. Its extreme length is 2,562 feet. Each of the four principal spans is 440 feet. Each of the two side openings are 225 feet. There are also two drawbridges at each end. The clear water way is 2,140 feet. The platform of the bridge is 80 feet above the summer level. The river rises 20 feet. The greatest depth of the river at summer level is 40 feet, the height of piers from foundation is 112 feet. The versed size of chain (not wire cable, but a chain of bars) is 80 feet. Each of the four chains is 2,280 feet long; their weight and that of the piers being 1,578 tons. The minimum sectional area of the four chains is 326 square inches. The total weight of iron in the bridge is 3,500 tons. Of masonry and concrete 1,500,000 cubic feet were used in the construction. The total cost of the bridge was $2,160,000.

Amboy, Lansing and Traverse Bay Railroad.

The schooner Advance left Buffalo a few days ago, with the first shipment of iron for the Amboy, Lansing and Traverse Bay Railroad. Her cargo consists of 224 tons of rail, manufactured at Danville, Penn., and it is forwarded under contracts with iron workers at that place which cover a supply of 3,000 tons. The iron is to be delivered on the cars at Danville, at the rate of 100 tons a day. —*Detroit Advertiser, July* 21.

New York Central Railroad.

This company are gradually filling up the gaps in the double track road between Albany and Buffalo. The only sections of single track on the line are between this city and Byron westward, and between Fairport and Canton eastward. A section of six miles is now being laid from Canton to Jordan. The Corning rail is being used for this new road. The bars are 22 feet long, are somewhat heavier than the old rail and they have a wider track for the wheels. This new rail is regarded with favor by practical railroad men. The cars run over it with less jar, making it more pleasant for passengers, and not so liable to damage the rolling stock.—*Rochester Union.*

Schuylkill Navigation Company.

This work, consisting of a succession of canals and pools, was commenced in 1815, and went into operation in 1822, and delivered to consumers 1,480 tons of coal. Thence, up to 1842, inclusive, the entire operations in coal amounted to 4,743,654 tons, making an average of 215,620 tons per year; cost at this time $2,500,176. Canals 36 feet wide at top, 22 at bottom, 3 feet 6 inches deep; 129 locks, each 80 by 77 feet, 34 dams; 1 tunnel, 385 feet in length; rise, 610 feet; length, 58 miles canals, and 50 miles pools. In 1843, the competition commenced with the Reading, and in 1846 an enlargement extended, not only the capacity, but at the end of 1859, the capital and debts amounted to $12,151,467, of which $4,655,064 is in stock, and the balance in loans and debts; gross income for the year $1,001,748.02; expenses, including interest, &c., $883,667.07; net profit, $118,080.95. From 1843 to 1859, the tonnage in coal amounted to 11,941,362 tons, which, together with the previous amount, makes 16,685,016 tons of coal since the operation commenced in 1822. Including the iron ore and other traffic, the entire tonnage amounts to 23,826,771; but as the work is now one of the best canals in the country; as it is finished and has a capacity for about one and a half millions; its lockage but 610 feet, and water equal to its trade, it may be viewed as near perfection as a canal can be; and since its location in the Schuylkill Valley, where the iron and manufacturing interests of the country are locating, it must continue to increase in business until its utmost capacity is reached. On the New York Canals, during 1858, the tolls received were $2,110,754.

On the Schuylkill, the tolls received in 1859 were $1,001,080.95, and yet the cost of the latter is less than one-third.—*Pottsville Mining Record.*

Chicago and Northwestern Railroad.

It is now protected by a permanent and substantial fence along its entire length from Chicago to Oshkosh. We believe no other company in the State has yet completed such a work as this. Though the track is in an excellent condition, parties of men are engaged on the newer portions of the line in ballasting and gravelling such places as may need a little fixing to make them more even and durable. The trains are run at such hours as will best suit the public convenience, and the affairs of the road are under excellent and prudent management. The business of the road has been large during the whole season, and the rich and fertile country which it penetrates promises to furnish a much greater amount of travel and transportation this fall. It passes through the length of the State, and for miles and miles a broad expansion or succession of fields of grain stretch on both sides of it.—*Watertown, Wis., Democrat.*

General Railroad Intelligence.

A decision was recently given by the Supreme Court of Maine, to the effect that the Legislature of the State has no right to enact laws regulating the running of railroad trains where that power by the charter is given to directors. The Legislature has control of all that relates to the safety of passengers, but none which appertains merely to the convenience of the traveling public. The question came up in an action against the Androscoggin and Kennebec Railroad Company, for not detaining their train twenty minutes, according to the act of 1858, in order to connect with another road.

With reference to city and county bonds suffering from repudiation the Philadelphia *Ledger* of recent date, says:

It is known that a very large amount of the bonds issued by the cities of Pittsburg and Alleghany, and by the County of Alleghany, are held in and about this city, which accounts for the interest manifested in their market value, a matter wholly regulated by the probability of payment. Within the last month there has been more inquiry for these bonds than for several months before, and the price within a fortnight has advanced fully ten per cent. They are now quoted at from 45 to 50 per cent. of their face, with sales at the former figure.

As heretofore remarked, every municipal bond ever issued in this country will eventually be recognized, unless in cases where towns or counties are "rubbed out" from the face of the map, if such cases there be. Some few municipalities, perhaps, may never be able to pay the whole of their debts. In these cases, a fair compromise, as with other bankrupts, will be effected. But what from pride, public opinion, legal decisions and improved ability, ninety-nine in a hundred of municipal bonds will eventually be paid, principal and interest. These are our opinions, and are given only as opinions, with no more light and information on the subject, however, than is within the reach of every intelligent reading man in the community.

In reference to the Baltimore Street Railroads, the *American* says:

Though we have some grumblers still among us in relation to our street railroads, cities in which a different system obtains, are not slow to recognize the advantages we possess. The Boston *Advertiser* says:

"It will astonish Bostonians to learn that, by order of the City Government of Baltimore, an arrangement has been effected whereby passengers, paying only a single rate of fare on one road, can obtain a ticket which will entitle them to ride to the terminus of any connecting road. If such a system were in operation in Boston, a person paying five cents in South Boston could be carried, without extra charge, to the Roxbury line, to Cambridge, or Charlestown Bridge, or to the farthest point in East Boston. But in Baltimore the roads were built to accommodate the people, and are under control of the city. Here things are different."

It may astonish our Boston cotemporary still further to know that, besides carrying a passenger for a single fare over any of the connecting roads, the city receives one-fifth of the gross revenue of the roads, from which we will ultimately obtain a park in which the Boston Common would be lost.

The State of Ohio is about to issue proposals for a 5 per cent. loan of $6,413,325, to redeem the 6 per cent. loans to that amount falling due January 1st, 1861. The total foreign debt of the State at present is $14,321,856, being about one and a half per cent. on the taxable value of the real and personal property of Ohio for the current year.

The Madison (Wis.) *Argus* says:

"The number of mortgages of farms to railroad companies in the State is 4,500, the average of the mortgage at $1,200, and the total amount $5,625,000—more rather than less."

An act passed at the last session of the Wisconsin Legislature requires all railroads to be fenced by the 1st of April next; and they are rendered liable for all damages to persons or property by reason of such fences not being constructed.

The St. Paul, Minnesota *Times* of June 23d, says:

"We learn from what we deem good authority, that the claim of Selah Chamberlain to a $600,000 mortgage on the La Crosse road, has been decided against him, so that he not only losses this amount, but is made liable for all the receipts of the road during the past three years. This is a heavy load to bear, and one under which no man can stand, not even Mr. Chamberlain."

The railway between St. John and Shediac, connecting the Bay of Fundy with the Gulf of St. Lawrence, will be opened for travel 1st of August.

The Malden and Melrose Railroad Company are making efforts to fund the debt of the corporation; and hopes are entertained that a dividend will be forthcoming in August.

The Easton *Gazette* says that the building of Dover Bridge has been decided upon. Caroline county appropriated $5,000, Talbot county $3,000, and the remaining $2,000 was raised by the taking of stock.

The Supreme Court of California has decided that the State shall recognize what are known as the "Stolen Bonds." The court rendered the decision on the 5th of June.

It will be remembered that this suit was instituted for the recovery of some $24,000 of bonds issued to Wells, Fargo & Co., as agents for parties at New York, which bonds were issued upon scrip alleged to have been stolen from the State Treasurer's office, after having been once paid, but not cancelled. The said warrents appear to have had no receipt or endorsement showing them to have been paid; and the treasurer, who is admitted to have been a vigilant and faithful officer, seems to have been equally deceived in regard to the matter as the defendants themselves. The Court says:

"The bonds issued under the circumstances are unquestionably negotiable instruments, and binding upon the State, in the hands of innocent assignees. It cannot be held that every man who deals with State securities is bound to search the books and records of the State officers before proceeding to take an assignment of the claim against the State. We do not know that the books and papers are subject to public inspection; and if they were so held, it might lead to very embarrassing results. It appears that the law had already prescribed a method of procedure, deemed by itself a sufficient protection and notification of the character of the claim; and the failure of the officers of the government to follow the law ought not to be turned to the jury of a citizen, and made the occasion of ruining him for being no wiser than those officers to whom this class of duties is specially intrusted."

The Hudson River Road has in use a model cattle car, built with slatted sides, like the ordinary open cars, but with close-boarded ends and platforms, and a roof over all. Space is left under the eaves enough for a man to crawl into the car, which he can do while in motion, if necessary, to attend to stock. Drovers very earnestly hope that that road and others will do away with box cars, and adopt this much improved one.

W. C. Nelson, of Monroe county, in a suit just decided in the Knoxville Circuit Court, recovered damages of the East Tennessee and Georgia Railroad to the amount of $11,000. Nelson had shipped thousands of bushels of wheat a few years since, and the testimony showed that the wheat was detained in the several depots of the company until it was injured to some extent, and until the price receded, causing him to lose heavily. As many as nine of the jurors were for allowing him $25,000, but they finally compromised upon the sum of $11,000.

In the case of the New York and New Haven Railroad *vs.* the New Haven, Hartford and Springfield, Judge HINMAN granted a temporary injunction restraining the latter company from running excursion or other passenger trains over their road in connection with the steamboats running between New York and New Haven. The decision forbids the Railroad Company from making any further contracts unless they arrange to run their cars into the depot in New Haven.

The *World* of 20th says; "We are informed on good authority, that the Attorney General of the State, acting under the direction of the Canal Commissioners, will, to-day, institute suit against the New York and Erie Railroad Company, for the amount of tolls that have been kept back from the State in consequence of the legislative enactment for their abolition, which enactment, it is maintained, was unconstitutional."

The *Tribune* of 21st says: "We understand that the papers in the suit, by the Attorney General of the State, against the New York Central Railroad for back canal tolls, were to be served on the Company to-day at 3 o'clock. It is stated in the street that the Company have determined to carry the question of the constitutionality of the canal toll provision in the original charter, to the Court of Appeals at Washington."

The Railroad Convention which was in session in this city during the past week, adjourned on the 20th, to meet at Saratoga on the 27th. The report of the Committee made to the convention contains the following recommendations:

That having fully considered the question, they are of opinion that the rates of freight can, with a proper regard of the interests of the public, be materially increased from their present standard. That the rates should be made to rise gradually on and after the 15th August, 1860. That it is in the power of the five Eastern trunk lines to make such arrangements with the other lines as will secure such changes of the rates from time to time as shall be agreed upon, and prevent those red uc

tions from which the railroad interests of this country have so seriously suffered during the last three or four years. They further recommend that the Presidents of the following roads hold monthly meetings alternately at Buffalo and New York: Pennsylvania Central, Baltimore and Ohio, Grand Trunk of Canada, New York Central, New York and Erie. At those meetings such other lines as shall please may send representatives. That at those meetings the rates will be arranged and be put in force from the first day of every month. All ticket offices in the large cities to be abolished, as being unnecessary and expensive, and that the usual free passes given to shippers of wheat to be also done away with. That any person in the employ of the various roads who shall be discovered taking freight at lower rates than those fixed by the Convention shall be immediately discharged. That all contracts with Express Companies end on the 1st of January, 1861, and that all agents in the future be paid a regular salary instead of a commission. The present rate of freights to remain the same until otherwise ordered by the Convention.

Railroad Earnings.

The revenue of the Baltimore and Ohio Railroad for June was:

MAIN STEM.

From Passengers	$51,832 05	
" Tonnage	252,490 39	
" Mails	7,833 34	
" Express	3,780 67	
		$315,936 45

WASHINGTON BRANCH.

From Passengers	$33,341 14	
" Tonnage	4,051 49	
" Mails	1,000 00	
		38,392 63

N. W. VIRGINIA BRANCH.

From Passengers	$2,532 71	
" Tonnage	16,709 13	
" Mails	866 67	
		20,108 51

Summary of Revenue for June, 1859 and 1860.

	1859.	1860.
Main stem	$300,473 50	$315,936 45
Washington Branch	34,625 59	38,392 63
N. W. Virginia Railroad	15,345 07	20,108 51
Totals	$350,444 16	$374,437 59

Showing an increase of $23,993 43.

The fiscal year of the Company commenced with October. The revenue for the first nine months of the present year compares with that for the same months of the previous year as follows:

	1859-'60.	1858-'9.
October	$416,929 61	$391,395 10
November	431,287 56	380,879 75
December	355,662 13	337,202 25
January	282,070 64	314,201 09
February	332,743 77	303,631 78
March	425,487 08	400,984 68
April	406,428 86	360,751 15
May	435,133 28	391,019 17
June	374,437 59	350,444 16
Totals	$3,460,180 02	$3,230,509 13
	3,230,509 13	
Increase present y.	$229,670 89	

The following is a comparative statement of the business of the North Pennsylvania Railroad Company:

Earnings in June, 1860	$31,444 96
Do. June, 1859	27,370 69
Increase	$4,074 27
In first seven month of fiscal year	$216,263 53
Same months last year	187,620 53
Increase	$28,643 00

Mr. Marsh, the Receiver, has filed a report showing the receipts and disbursements of the New York and Erie Railroad Company from Jan. 1, to June 1, 1860. It is as follows:

	Receipts.	Disbursements.
January	$494,499 97	$520,082 87
February	461,841 65	443,759 99
March	448,045 14	414,645 43
April	519,272 29	464,599 26
May	555,680 00	632,697 28
Total five months	$2,479,339 05	$2,473,734 83

The earnings of the Milwaukee and Minnesota Railroad for the first six month of 1859 and 1860 is as follows:

	1859.	1860.
January	$35,193 45	$32,883 56
February	35,603 25	36,669 76
March	36,380 64	44,269 15
April	38,788 38	54,532 26
May	46,850 31	69,623 47
June	49,999 67	50,780 02
	$242,815 70	$284,758 22
Increase for six months, 1860		$41,942 52

The following statement shows the receipts and expenses of the Central Ohio Railroad Company for the past six months:

	Receipts.	Expenses.
May	$54,108 94	$43,427 92
April	42,581 57	33,874 33
March	52,700 64	40,510 84
February	46,900 49	36,051 19
January	41,946 98	40,888 21
December	43,907 10	43,108 05
Total for six months	$282,144 81	$287,855 54

The following statement shows the business of the Reading Railroad during the month of June, 1860, compared with the same month of 1859:

	1860.	1859.
Received from coal	$197,907 37	$167,159 12
Do. merchandise.	48,015 20	33,789 80
Do. travel, etc.	32,346 99	29,428 47
	$278,269 56	$230,377 40
Transportation, roadway, dumpage, renewal Fund, and all charges	143,668 66	126,432 97
Net profit for the m'th.	$134,600 90	$103,944 43
Do. for previous 6 mos.	577,696 33	510,865 78
Total net profit for 7 months	$712,297 23	$614,810 21

The earnings of the Marietta and Cincinnati Railroad for June, were $34,417 38, of which $14,288 21 was credited to the passenger traffic, and $20,986 36 to the freight. The increase over the same month of last year is not far from $7,000.

The earnings of the Eighth Avenue Railroad for the six months ending June 30, were:

January	$30,516 48
February	26,668 49
March	30,809 19
April	30,892 42
May	33,434 02
June	35,196 01
Total for six months	$187,516 55

The earnings of the Central Railroad Company of New Jersey, for June, 1860, were, $105,802 06
For the same month last year 80,685 41

Increase, 21 per cent. $25,116 65

The Hamilton, Eaton and Richmond line earned during the month of June, $9,000, which shows a small gain over June, 1859. The gross earnings of this road for the six months ending July 1st, are $3,000 larger than the receipts for the first half of last year.

The traffic of the Great Western Railway of Canada for the week ending July 20, 1860, was as follows:

Passengers	$15,055 29
Freight and live stock	10,618 51
Mails and sundries	1,396 35
Total	$27,070 15
Corresponding week last year	26,877 64
Increase	$192 51

New Jersey Railroad and Transportation Company.

The following is an abstract from the Annual Report of this Company for the year ending Jan. 1, 1860, made to the New Jersey Legislature:

Capital stock		$3,749,000 00
Funded debt, (including $485,000, the cost of the property, etc., purchased of the Jersey Associates		688,000 00
Profit and loss, being surplus earnings expended in the construction of the road, and in payment of the property stated below,	$527,925 99	
Less paid for relaying the road with new rail	$10,500 00	
Less paid for damage by fire to st'm-boat J. S. Darcy	17,207 37	
	27,707 37	
		500,218 62
Dividend 1st January, payable 1st February, 1860		187,450 00
		$5,124,668 82

COST OF RAILROAD AND EQUIPMENTS.

For graduation and masonry, bridges, superstructure, iron, passenger and freight stations, buildings and fixtures, engine and car houses, workshops, machinery and fixtures, engineering, land and land damages		$3,374,910 36
Locomotives, tenders and snow plows		142,780 09
Cars—passenger, freight and baggage		200,195 36
Cost of railroad and equipments		$3,717,885 81
PROPERTY, VIZ:		
Bridge, ferry, turnpike, and other stocks, real estate, ferry boats, privileges and fixtures, (including the property and privileges purchased of the Jersey Associates for $485,000)	$1,249,839 19	
Cash in Bank and cash items on demand	156,943 62	
		1,406,782 81
		$5,124,668 82

American Railroad Journal.

Saturday, July 28, 1860.

Railroad Reports.

Railroad Companies will oblige us by sending us copies of their Reports as soon as they are published.

New York and Erie Railroad.

The annexed figures of this Company will be found interesting at this time, as active arrangements seem to be progressing for establishing the credit of the concern:

		Interest payable.
1st mort.,	$3,000,000,	due 1867, 1st May & 1st Nov.
2d "	4,000,000,	" 1859, 1st M'ch & 1st Sept.
3d "	6,000,000,	" 1883, 1st M'ch & 1st Sept.
4th "	3,705,000,	" 1880, 1st Apr. & 1st Oct.
5th "	1,253,500,	" 1888, 1st June & 1st Dec.
Total	17,958,500	

The above is the amount of mortgage bonds of he Erie Railroad Company, as per Receiver's books, 15th August, 1859.

The payments on account of interest in March, April, and May of this year were over $300,000.

On the thirds, fourths and fifths, no interest has been paid since the Receiver took possession of the road on 9th August, 1859, and these bonds are now selling with this accrued interest thereon, the purchaser, of course, being entitled to the same.

It is estimated that this year's receipt will be about $5,000,000
The operating expenses same as last y. 3,075,000

Net earnings	$1,925,000
Interest on $18,000,000	1,260,000

Really earned for preferred stock .. $665,000

without taking into account the saving of expenses expected from the successful operation of the Long Dock Improvement, which will do away with the expensive transportation of freight from Piermont.

Lexington and Big Sandy Railroad.

The sale of this road under a decree of Court has been postponed to August 8th.

Cambria Iron Works.

For the six months ending June 30, 1860, Wood, Morrel & Co., lessees of the Cambria Iron Works, at Johnstown, made to order 16,081 tons of iron rails, for railroad companies in different States.

A considerable portion of this large quantity was conveyed to its destination down the Ohio river and thence by connecting streams which ramify the Mississippi Valley. Throughout this vast basin which constitutes the *interior region of the Union and the Continent*, Wood, Morrel & Co., as lessees of the Cambria Works, have acquired for their iron rails a character for excellence in quality and durablity in service.

This result, which is everywhere evinced in the satisfactory terms used by companies having Cambria rails in their tracks, is due jointly to judicious and enlightened management on the part of the lessees, to the resources of the vicinity of the works in ores and mineral fuel, and to the facilities for transportation and delivery, from the rail mills to all points accessible by water or land routes.

Wharton's Patent Turn-out for Railroads.

We give elsewhere a full description of this improvement. A model track, with turn-out, and two miniature trucks, one with wheels having an extra tread, and the other with wheels of the ordinary form, are now on exhibition at this office, where they may be seen and examined by those who are interested in such matters. As far as the model is concerned, the improvement appears to us to be admirably adapted to the purpose for which it is designed.

Boonton Iron Works.

The celebrated Iron Works and Nail Factory, of Messrs. Fuller, Lord & Co., are situated on the banks of the Morris Canal, at Boonton, N. J. These works consume 25,000 tons of coal annually, giving employment to between 600 and 700 men, and produce yearly 200,000 kegs of nails, spikes, and other articles of iron manufacture. Each keg of nails weighs 100 pounds, and of the smaller nails there is an average of about 50 to the pound. Multiply these 200,000 kegs by 100 pounds each, and each pound by 50 nails to the pound, and we have the enormous produce of one thousand millions of nails made at this single establishment in one year! The same establishment makes from the ore about three-fourths of all the iron it uses, beside manufacturing from log all the kegs in which the nails are sent to market—having usually on hand seasoning for use, two millions of staves. The wholesale price of the nails is about three cents per pound, but probably nets to the proprietors of the factory not more than 2½ cents per pound. This great establishment is driven by the water power of the Canal Company, and is but one of many participating in the privilege along the greater portion of the work.

Hudson River Railroad.

The Hudson River Railroad Company offer stockholders the right to purchase five hundred bonds, of one thousand dollars each, to be issued under the third mortgage, and to be expended for the extension of a double track, new depot buildings, and funding the floating debt. The bonds to be issued at 95 per cent. (as cash on the 1st of August next) on the face of the same, with interest coupons payable from the 1st of May last. The privilege will cease unless exercised on or before the 10th of August next. Subscriptions will be received at the Company's office, 68 Warren street.

Virginia State Loan.

The Board of Public Works of Virginia give notice that proposals will be received at any time prior to the 1st of September next for a loan of $6,000,000, payable in such monthly instalments as may be required, not exceeding $200,000 per month. Said loan to be redeemable in thirty-four years. Interest payable semi-annually on the first day of January and first day of July of each year, at the Treasury of the State in Richmond.

Proposals are also invited for the same loan at 4½ or 5 per cent. Federal, sterling or other appropriate bonds will be issued for the loan, as paid in, at the option of the lender.

By the Constitution of the State, and laws in pursuance thereof, a sinking fund is established for the punctual payment of the interest semi-annually, and the redemption of the principal in thirty-four years from the issue of the bonds. These provisions of law, the large and increasing taxable resources of the State and tax laws, furnish the strongest possible assurance of the safety and value of the loan.

Sealed proposals to be addressed to the "Board of Public Works, Richmond, Virginia," and endorsed "State Loan," where any further information that may be desired will be promptly given.

James River and Kanawha Company.

The holders of the bonds of this Company, guarantied by the State of Virginia are notified that in pursuance of an act passed on the 23d of March, 1860, upon the surrender to the Board of Public Works, by the holders thereof of the bonds of the said Company, for the payment of which the State is responsible, on and after the first day of July, 1860, the said Board of Public Works will issue and deliver to said holders a corresponding amount of the bonds of the State of Virginia, made in the manner prescribed by law, payable thirty-four years after their date, and bearing at the rate of six per cent. per annum, payable semi-annually.

Southern Pacific Railroad.

We learn from the Cincinnati *Enquirer*, that Col. A. De Graffe, the well known railroad contractor, is now on his way to Texas. Col. D. has a contract for the construction of 700 miles of the Southern Pacific Railroad, and will enter immediately upon the works.

Lexington and St. Louis Railroad.

We learn from the Georgetown Mo., *Press*, that Farmers City has been decided upon as the eastern terminus of this road. At a recent meeting of the friends of the enterprise, Col. C. H. Field, one of the directors, stated that ten miles beginning at Farmers City, would be put under contract in ten days; and if so, it could be completed to Georgetown, seven miles, by the time the Pacific reached Farmers City. The route is such, that with the exception of one mile, the grading can be done quickly and cheaply. The *Press* says; "The thing can be done, and that with ease, as we learn there is stock enough subscribed to the road to ensure its completion. Many responsible men in Pettis, who desire the road, are subscribers to the road. They are farmers who need its facillities, and now let them give the enterprise the material encouragement, and the road will be built, and that soon. Knowing the wealth of the country through which the road passes, and the enterprising spirit of its citizens, we expect to see it completed sooner than any road ever projected in the State."

Buffalo and Pittsburg Railroad.

The Buffalo *Courier* says: "Contract has just been made with Messrs King & Cross to finish, ready for the cars, within six months a piece of the Buffalo and Pittsburg Railroad extending south from the Great Valley, along the east branch of the Tuanangwant Creek, 27 miles in length. Mr. Cross, who is a son-in-law of Mr. Vanderbilt, the well known mail contractor, has taken bonds of the road for $125,000 at 30 cents, on which he is to pay at the rate of $20,000 per month. The Company have bought chairs, rails, &c., for this piece of the line, and men have already been to work on it for two or three weeks. The portion of the line indicated extends the road across the State line and into the heart of McKean County, perhaps the richest coal district in Pennsylvania."

Railroads in Kansas.

From late Kansas papers we learn that the city of Leavenworth has by a decided vote at a popular election agreed to issue $150,000 of bonds to aid the completion of a road, fifty miles long, to connect with the St. Joseph Railroad. By a treaty negotiated with the Delaware Indians land enough will be secured to make a railroad from Leavenworth to Fort Riley, a distance of 120 miles on Pike's Peak route.

☞ Messrs. A. H. Dyett, of the Stock Exchange, and Mr. P. W. Holmes, have formed a new Stock firm under the style of Dyett & Holmes. Their card will be found in another column.

☞ Mr. J. M. Grant has arrived in London, to assume the duties of London Secretary of the Grand Trunk Railway of Canada, until recently performed by Sir Cusack P. Roney.

☞ At a meeting of the shareholders of the Grand Trunk Railway, on the 23d of May last, it was resolved, that the terms of the engagement with Mr. Blackwell as Managing Director, be extended to the 1st of September, 1867.

☞ Lindsey Ward has been appointed Receiver of the Horicon Railroad. The appointment was made by Judge Miller, of the U. S. District.

☞ Capt. George McClelland, the Vice-President of the Illinois Central Company, has resigned his place, to take charge of the Ohio and Mississippi road as President of the Eastern Division, and General Superintendent of the entire line.

☞ W. Mils Olin has been appointed Secretary and Treasurer of the Macon and Augusta R. R. Co. The line of the road has been located, via Warrenton.

☞ The Hon. John A. Floyd has been elected President of the Virginia and Kentucky Railroad.

Insurance Dividends.

The Exchange Fire Insurance Company has has declared a semi-annual dividend of 6 per cent. payable August 1st. The Astor Fire Insurance Company has declared a dividend of 8 per cent. payable August 1st. The Peter Cooper Fire Insurance Company has declared a dividend of 6 per cent. payable on the 1st of August. The Greenwich Insurance Company has declared a semi-annual dividend of 5 per cent. payable August 1st. The Broadway Insurance Company, a semi-annual dividend of eight per cent. payable August 1.

Interest on Stocks, Bonds, etc.

The Directors of the Connecticut River Railroad have declared a dividend of 4 per cent. on the preferred stock; a regular dividend of 2½ per cent. and an extra dividend of 1½ per cent. on the common stock; payable on the 1st of August.

The interest on the first mortgage bonds of the Cincinnati, Hamilton and Dayton Railroad, due July 20, will be paid at the Bank of America.

The August coupon on the Sinking Fund Bonds of the Chicago and Northwest Road will be paid at the American Exchange Bank.

The regular quarterly dividend of 2 per cent. by the Brooklyn Central Railroad Company has been declared payable on the 10th of August.

The transfer books of the New York Central Railroad will be closed on the 31st inst., preparatory to the declaration of the semi-annual dividend, and remain closed until the morning of the 22d day of August.

The following dividends have been declared payable in Charleston:

South Carolina Railroad Company, 3½ per cent. Bank of Charleston, 3½ per cent. People's Bank, 5 per cent. Charleston Insurance and Trust Company, $5 per share. State Bank, 87½ cents per share. Union Bank, $1 75 per share. Planters' and Mechanics' Bank, 87½ cents per share. Bank of South Carolina, $1 50 per share. Southwestern Railroad Bank, 75 cents per share. South Caroline Insurance Company, $2 50 per share.

The Morris Canal and Banking Company has declared a dividend of five per cent. on the preferred stock, and two per cent. on the conslidated stock.

The interest on the 1st mortgage bonds of the Cleveland and Mahoning Railroad Company, due 1st of August, will be paid at the office of Ward, Campbell & Co., No. 56 Wall street.

The July interest on the first hundred bonds issued by Athens County, Ohio, Nos. 1 to 100, will be paid by W. Hoge & Co., No. 58 Wall street. The Auditor of the County expresses the opinion that the overdue interest on the second issue will be ready in the course of the Fall.

The interest Coupons on the Second Mortgage bonds of the Harlem road and those of 1861, will be paid at the Treasurer's Office, August 1.

Bank Dividends.

The Leather Manufacturers' Bank has declared a semi-annual dividend of 5 per cent. payable August 1st.

Railroads in Tennessee.

The following from the Nashville *Gazette* is a striking demonstration of the value railroads have given to the real estate of Tennessee:

Tennessee has now projected about 1,500 miles of railroads; she has completed up to last year, 1,062 miles, and the same in operation. The cost of this work has been about $27,348,141. Of this amount the State has advanced her credits to the sum of $13,799,000, leaving the sum of about $14,549,141, which has been supplied by individuals, counties and cities as stockholders, and on the individual credits of the various companies. The sum of three per cent., on the cost of the road, excepting State aid, pays the interest on the State bonds, and creates a sinking fund sufficient to pay the principal at maturity, so that the State has lost nothing yet, nor is it hardly possible that she can lose one cent from the aid she has given to her railroads. Here, then, says the Memphis *Appeal*, is a most astonishing fact, that with an investment of about $14,549,141 on the part of the stockholders in Tennessee railroads, a profit has accrued to the people of the State, in ten years of $247,698,598 less the increase attributable to the increase of money, which, if we put at 100 per cent., will leave $118,188,555 clearly attributable to railroads, equal to about eight hundred per cent. on the investment, other than that arising from the State aid.

Railroad Cars.

We had the pleasure last evening of examining a superb passenger car, lately put upon the Opelousas Railroad track. This magnificent car was built in St. Louis, and brought down upon the Imperial.

We congratulate the gentlemen in charge of the Opelousas Railroad upon the enterprising and liberal spirit which they display in furnishing their road with such elegant and stylish accommodations, and upon their discrimination in getting their orders filled nearer home, more conveniently and more cheaply. Touching this latter consideration, we were prepared, of course, to hear that freight from St. Louis to our city on such a vehicle is much less than from any of the Eastern factories, that the car itself is far less knocked about and shattered, and that it can be gotten here much sooner after the order being given; but we were somewhat surprised to hear that wages for such work are as low in St. Louis as at the East.

We rejoice indeed to see such a splendid specimen of mechanical finish coming from a Southern State, and to hear that it can be furnished here at lower rates than those of the Eastern States, upon which we have hitherto been unfortunately entirely dependent for so many things. This car is perhaps the handsomest one in the Southern country, and worthy of a visit from our intelligent railroad gentlemen on this side of the river. Its proportion is lofty, and its handsomely panneled exterior is of a bronze color. The interior is also to a considerable extent bronzed, but of a much lighter shade. The ceilings and sides are beautifully finished, the seats soft and spacious, and everything apparently is staunch, though lightness is undoubtedly consulted.

The builders of this car, we are informed, are Messrs. S. B. Lowe & Co., of St. Louis, and this is but one of an order which they are filling for the same road.

Some persons seem to imagine that any kind of passenger car will do, if the locomotive is good; in other words, that speed is the only requisite of railroad travel. This is a mistake, That may have done very well formerly, but there are so many channels of travel now a-days, there is so much opposition, that even a little question of comfort or elegance may frequently suffice to determine the choice of a route. At any rate, a proper regard for appearances would dictate that any important road should be furnished with rolling stock of a superior quality, and we do not know where it could be obtained of a more elegant appearance, so far as cars are concerned, than from the house above referred to.—*N. O. Cresent, July 18th.*

Northern Railway of Canada.

No Canadian enterprise affords better evidence of the reviving prosperity of the province than this line of 94 miles from Toronto to Collingwood, on Georgian Bay. We observe with satisfaction the steady and rapid increase in the traffic receipts for this year, as compared with the year 1859. No doubt the absence of all competition for local business is an unusually favorable circumstance in connection with this railway, as the proprietors are sure of securing whatever traffic the locality affords. Although the company do carry a certain amount of "through freight" by means of their steamboat connection with Chicago, the bulk of their business is local, and the average above indicated (exceeding 19*l.* per mile per week) is well calculated to restore confidence in the future of Canadian investments. In the case of the Northern Railway it is especially a subject for congratulation, as it justifies the confidence which induced the Provincial Legislature so liberally to sanction and the bondholders to carry out the recent re-organization, by means of which it has been freed from the pressure of an unwieldly floating debt and placed in a thoroughly efficent condition.—*Canadian News.*

Railroad Debt of Milwaukee.

The entire debt of the city of Milwaukee amounts to two millions six hundred thousand dollars. Of this amount, the following exhibit shows the indebtedness from defaulting railroads, and the amount of interest coupons overdue:

	Bonds.	Unpaid Coupons Nov. 9, '59.
Mil. & Miss. R. R. Co.	$84,000	
do. do. do.	150,000	
do. do. do.	300,000	
Total	$534,000	$35,970
Mil. & Watertown R. R. Co.	200,000	20,284
La Crosse & Mil. R. R. Co.	$200,000	
Mil. & F. du Lac & G. B. RR.	140,000	
Total	$314,000	14,658
Mil. & Horicon R. R. Co.	166,000	13,000
Mil. & Beloit R. R. Co.	100,000	13,273
Mil. & Superior R. R.	100,000	19,833
G. B., Mil. & Chic. R. R.	200,000	
Total, Nov. 9, 1859.	$1,614,000	$119,946

Street Railroads and Right of Way.

The question of the right of way upon street railroads has arisen in Boston, where it appears some of these roads are laid in very narrow streets, and disputes frequently arise between railroad conductors and drivers of other vehicles. The driver of a loaded team having refused to turn aside from the track to allow a car to proceed, he was arrested and indicted for wilfully obstructing travel. Chief Justice Shaw of the Supreme Court gave an opinion which must be considered good common sense, as well as good law, and, therefore, applicable everywhere that railroads exist in cities. He took the ground that the leading object of chartering city railroads was the accommodation of travel, and not profit to their proprietors. The privilege having been granted to lay tracks necessarily carries with it all incidental rights and powers necessary to the full use and beneficial enjoyment of the grant; and when such grant has for its object the procurement of an easement for the public, the incidental powers must be so construed as most effectually to secure to the public the full enjoyment of such easement. He said:

"It appears that the proprietors of the horse railroad, having received a franchise, had laid down a railway track, and had procured horse-cars, with suitable conductors, and were in actual use of the track. The cars could only pass on one precise line. The wagon could deviate to the right or to the left within the limits of the traveled part of the road. The public, by the grant of the franchise, had granted the right to move on that precise line, and had given to all passengers the right to be carried on that line at the usual rate of speed as which passengers are carried by horses, subject only to occasional necessary impediments. The cars cannot so move and the passengers cannot be so carried, whilst the wagon moves on the track. No impediment is shown to prevent the wagon from turning out. The wagon, therefore, is for the time being an unnecessary obstruction of the public travel, and therefore unlawful.

It is said that it is usual for those in charge of heavy and slow teams to drive them with one wheel on the track, and that they could be driven much more easily in that place than in any other part of the street. This is no justification. Whilst

the track was not required for the cars, perhaps the teamster had a right so to use it. But, when required for the cars, which could pass in no other mode, he had no legal right to consult his own convenience, to the great inconvenience, the actual injury of the equal rights of another.

It is no excuse that the defendant did not get upon the track in the first instance with the intention of obstructing the passage of the cars, or that he did not slacken his rate of speed at their approach; it is a nuisance, if, for his own benefit, he violates the rights of others; and if this consists in the violation of a public right, indictment is the appropriate remedy for its vindication and redress. Nor is express malice, a disposition or desire to cause damage to another, as in case of malicious mischief, necessary to the completion of the offence. It is a nuisance if one wilfully seeks and pursues his own private advantage, regardless of the rights of others, and in plain violation of them, it is a wrong done. And as every man must be presumed tointend all the necessary natural and ordinary consequences of his own acts, it is a wilful and intended wrong; it is malice—a thing done *malo animo*—in the sense of the law: and no other malice need be proved, to show the act to be a nuisance."

THE NEW YORK CENTRAL RAILROAD COMPANY.

TREASURER'S OFFICE,
Albany, July 18, 1860.

THE Transfer Books of this Company will be closed at the close of business, on Tuesday the 31st day of July instant, and will be re-opened on the morning of Wednesday the 22d day of August next.

LYONS' TABLES.
To Civil Engineers and Contractors.

FOR SALE AT THIS OFFICE—A set of Tables for finding at a glance, the true cubical contents of Excavation and Embankments for all Bases, and for every variety of Ground and Side Slopes.—By M. E. LYONS, C. E.

SHEET No.			SHEET No		
1.	General Table for all Bases and all Slopes.		13.	for Base 18 ft. Slop.	1½ to 1
2.	For Side Hill Cuts and Fills.		14.	" 20 "	1½ to 1
3.	Base 12 ft. Slopes	1½ to 1	15.	" 24 "	⅞ to 1
4.	" 14 "	1½ to 1	16.	" 24 "	1½ to 1
5.	" 15 "	⅞ to 1	17.	" 25 "	1½ to 1
6.	" 15 "	1 to 1	18.	" 26 "	1½ to 1
7.	" 15 "	1¼ to 1	19.	" 28 "	⅞ to 1
8.	" 16 "	⅞ to 1	20.	" 30 "	1 to 1
9	" 16 "	1 to 1	21.	" 30 "	1¼ to 1
10.	" 18 "	⅞ to 1	22.	" 30 "	1½ to 1
11.	" 18 "	¾ to 1	23.	" 32 "	1 to 1
12.	" 18 "	1 to 1	24.	" 32 "	1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will send a Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.

Prices exceedingly moderate. Send for a circular.

All orders and communications will receive prompt attention.

Address CHARLES T. PORTER, Patentee and Manufacturer,
235 West 13th St., NEW YORK CITY.

A few reliable Agents wanted.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.
In recommending it to their patrons, **TIFFANY & CO.,** after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength. For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HUDSON RIVER
CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling. The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,
JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE,** Secretary, 90 Wall st., N. Y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.
ROSENDALE AND KINGSTON CEMENT CO. Manufactory at Kingston, N. Y. on the West Bank of the Hudson River. Office 43 Pine st., New York City.

New York, Saturday, August 4, 1860.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Grand Rapids and Indiana Railroad.

The following gentlemen were elected Directors of this company at a meeting of the stockholders held at Kalamazoo, Mich., on the 16th ult.: Joseph Lomax, Kalamazoo; Jonathan G. Wait, Philip H. Buck, William Henry, Sturgis; Francis F. Jewett, Lima, Ind.; Wm. S. Boyd, Lagrange, Ind.; Jas. A. Walter, Israel Kellogg, Kalamazoo; Leonard Covell, Lewis Porter, Grand Rapids; Wm. Wilbur, Wolcottville, Ind.; Richard Beed, Sturgis. One vacancy, created by the resignation of G. D. Rice.

Mississippi Central Railroad.

Two important events in the history of this road have occurred during the last fiscal year, viz: the consolidation of the Mississippi Central and Tennessee Railroad with the Mississippi Central, consummated in June, 1859, and the completion of the road within Mississippi in January, 1860.

The Tennessee division of the road up to the date of the consolidation had cost the late M. C. & T. R. R. Company $872,503, not including the rolling stock. The share capital of the late company amounted to $309,550; the funded debt $646,000, viz: $117,000 in 1st mortgage bonds, and $529,000 in Tennessee State Bonds and floating debt $13,857.

The completion of this road was the completion of unbroken (except between Cairo and Columbus) north and south lines of railroad from New Orleans and Mobile to Chicago and Dubuque. The 20 miles still wanting to complete the *all rail* route is supplied by a connecting steamboat line running in connection with the trains of the roads respectively.

The reports of the several officers of the company for the fiscal year ending 30th April, 1860, covers the whole length of the consolidated road—a distance between Canton, Miss., and Jackson, Tenn., of 236 miles.

It appears from the Report of the Treasurer, that the aggregate receipts from all sources have been $6,331,899, and the aggregate disbursements on all accounts have amounted to $6,135,867 leaving $196,032 in the treasury, applicable to the liquidation of the indebtedness of the company.

There is included in the disbursements the sum of $86,835 31 not chargeable to the cost of the road. The amount has been expended in the purchase of about 2,800 acres of land, valuable for its timber, in immediate proximity to the road, and fifty-four negroes—some of whom are valuable mechanics.

The notes of the company were given in payment of these negroes, and are included in the present floating debt. This portion of the indebtedness of the company has been largely increased during the past year, by the purchase of additional equipments, rendered necessary by the opening of the entire road, and the increase of traffic thereby anticipated.

There has been placed on the road during the past year ten locomotives, one hundred and twenty-five freight, ten passenger, six post office and baggage cars. An increase of the present number of locomotive engines, freight and passenger cars will be necessary during the present year, to enable the company to facilitate the movement of the future probable increase of traffic.

The inability of the company to pay at the time of delivery for the equipments required for the movement of passengers and freight, and the necessity of erecting buildings for the accommodation of passengers and the security of property intrusted to them, has compelled the Directory to resort to credit to meet this demand, although by so doing the floating debt would be largely increased by the purchases thus made. The business of the road has been frequently incommoded and lessened in amount for the want of a much larger supply than has at any time been on the road.

The assets, now in the hands of the Treasurer, amounting to $196,032 51, is applicable to the payment of the floating debt. The proceeds of the unsold income bonds of the company, amounting to about $30,000, when disposed of will be applied in the same way.

The present floating debt amounts to..		$895,992 42
Assets in hands of Treasurer	$196,032 51	
Income bonds unsold	30,000 00	
		226,032 51
To be provided for		$669,959 91

The receipts of the road during the past fiscal year was $584,342 23, with all the disadvantages of operating only portions of the Northern and Southern Divisions, and with but partial equipments.

Now that the road track is completed, and with increased equipments and contracts made for additional supply, the President estimates the gross receipts of the road for the present fiscal year at $1,200,000 and its net revenue at $660,000.

If this income is not over estimated it will provide for the interest on the funded debt, payment to the sinking fund, and liquidate $450,000 of the present floating debt. There will remain $219,959 91 to be provided for out of the next year's revenues. The income, from two years operation

of the road, exclusive of what will be required to pay interest on the funded debt, will be sufficient to discharge in full the present floating debt of the company, and such additions thereto as may become necessary for additional equipments, buildings and permanent repairs.

The amount of assets in the hands of the Treasurer, at the date of his last annual report was	$209,291 05
The amount paid into the Treasury, from all sources, during the fiscal year, ending 30th April last, was	1,436,921 16
Total	$1.646,212 21
The disbursement from the Treasury, during the same period of time, on all accounts, has amounted to	$1,450,179 70
Remaining in Treasurer's hand	$196,032 51

The Superintendent of the Northern Division reports the earnings of that part of the road at $407,332 36, derived from the following sources, viz:

From passengers	$207,935 02
" 62,112 tons freight	167,302 27
" United States Mail	29,275 34
" Express and News Agents	2,819 73
Total earnings	$407,332 36
The expenditures for materials, labor, salaries, repairs of engines, cars and maintenance of way, have amounted to	$193,706 33
Net earnings for the year	$213,626 03

The aggregate of cotton forwarded from the several stations on the Northern Division, during the fiscal year, has been 85,117 bales. Deducting therefrom the quantity forwarded from stations on the Tennessee Division, exhibits an increase of 28 per cent. over the shipments of the previous year.

The proportion of expenses have been 47½ per centum of the earnings. These were increased by the cost of the movement of a large quantity of materials for construction. Had the earnings of the road received credit for the actual cost of transit of these materials, the proportion of expenses to earnings would have been considerably reduced. These remarks are as applicable to the Southern as to the Northern Division.

The expenses of operating the Northern Division of the road, with its heavy grades, high embankments, deep sandy cuts and consequent liability to injury by heavy rains, will for many years exceed those of the Southern Division, where the grades are light, the embankments low, and few excavations.

The Superintendent of the Southern Division, reports the gross earnings of that portion of the road for the fiscal year, at $177.009 87.

From passengers	$80,877 37	
" 29,913 tons freight	79,786 82	
" United States Mail	10,483 32	
" Express & incid'tals	5,862 36	
		$177,009 87
The expenditures for conducting transportation, repairs of engines, cars, and maintenance of way, amounted to		62,543 44
Net earnings		$114,466 43

The proportion of the expenses has been 35½ per cent. of the gross receipts.

The amount of cotton shipped from the several stations of the Southern Division during the year, ending April 30, 1859, was 33,793 bales. The number of bales shipped during the year, ending April 30th, 1860, from stations on that division was 57,371 bales, being nearly double the quantity of the previous year.

The receipts of both divisions of the road during the fiscal year, has been:

From passengers	$288,812 39
" 92,024 tons freight	247,089 09
" United States Mail	39,758 66
" Express and incidentals	8,682 09
Total earnings	$584,342 23
The operating exp'ns have am'ted to	356,249 77
Net earnings	$328,092 46

There is an apparent discrepancy in the aggregate amount of operating expenses reported by the Secretary, and the sums reported by the Superintendents, amounting to $5,334 01. This originates by the payment for materials and fuel now on hand, and included in the amount reported by the Secretary, but deducted from the amount of the Superintendents' expenditures, and will be chargeable to the operating expenses for the current year.

The earnings and expenses per mile, of road in operation during the fiscal year, are as follows:

Earnings from all sources	$3,027 70
Expenses	1,327 70
Net earnings	$1,700 00

The receipts, expenses, and net income per mile, run by trains, have been as follows:

Earnings, per mile, run by passenger and freight trains	$1 60
Net earnings, per mile, do. do.	0 90
Expenses, per mile, run by all trains	0 59

The net earnings have been 5½ per cent. on the cost of the road and its equipments—a result that should be satisfactory to the stockholders, when it is remembered it has been produced on a broken and incomplete line of road, and with equipments inadequate to the expeditious movement of traffic offered for transportation.

The quantity of cotton transported has been 143,488 bales, against 86,531 bales last year. This amount of cotton, deducting therefrom the number of bales forwarded from stations on the Tennessee division of the road, exceeds any estimate ever made of the number of bales that would be transported between Grand Junction and Canton.

The quantity of cotton that has been transported on the road since the first train was started, has been 400,000 bales. The amount saved to the producers of this cotton, by a reduction of the cost of transporting it to market, together with a reduction in the cost on return freights, during the same period of time, has exceeded one-tenth the cost of the road and its equipments.

The equipments now upon the road consist of 25 locomotive engines, 19 first class passenger cars, 3 second class do., 11 Post Office and baggage cars, 124 platform freight cars, 157 box do., 31 hand cars, and 13 hurdle cars.

Contracts have been entered into for twelve additional engines, 175 freight cars, 10 passenger and two post office and baggage cars, all to be delivered before the month of October next.

Ten freight cars are in process of construction at the Holly Springs' shops, and the number may probably be increased.

The Southern Division of the road extending from Canton to Grenada, 87 miles, was completed on the 31st January, 1860. Until the 28th October, 1859, only 36 miles (from Canton to Durant) were operated. At that date the road was extended from Durant to West's Station, a further distance of 9 miles, and on the 24th October from West's Station to Vaiden, a distance of 10 miles. The connection of the Northern and Southern divisions was made at the date above stated.

The following exhibits the receipts and expenditures of the company from its organization to the 30th April, 1860:—

RECEIPTS.

Superintendent, N. Div. E. G. Barney, and of *S. Div.* E. D. Frost.

Principal Office—Holly Springs, Miss.

The Electric Telegraph upon Railways.

One of the most useful applications of the electric telegraph is in connection with our railroads. No railroad should be without a telegraph line, so that the precise situation of every train on the road is known at the Superintendent's office, and at all the depots on the line.

On some English railways, the movement of trains is entirely regulated by telegraphic signals. The conditions under which trains or engines are allowed to move are, that every train leaving or passing a station is signalled *out* to the next station, and must not go on till the *out* signal is taken. Its arrival is signalled back to the last station, and no second train is allowed to follow until the first has arrived; for no two trains are permitted to be on the same length of railway between two signal stations at the same time. A train is considered *in* when within the protection of the semaphore-signals of the station, and the telegraph permission for a second train to follow refers only to the open line, as far as the previous train is concerned, and extends only to the distant signals of the station. On approaching the station, the train is subservient to the visible signals.

The Erie Railroad was the first road in this country to adopt the telegraph as an adjunct, and a description of its progress is therefore given. The telegraph line upon the New York and Erie Railway was originally constructed by that company from Piermont to Dunkirk, the former termini of their road, with a single wire, which was devoted exclusively to the business of the road, in transmitting communications to and from officers, employees, &c. At this time, and for nearly a year after its construction, it was thought impracticable and unsafe to have recourse to the telegraph for the moving of trains, the advantages which have since been realized from its use, as adapted to railways, not being so apparent as now.

Soon after Mr. Tillotson's appointment to the superintendence of the line, in 1851, it occurred to him that an immense amount of time and money might be saved to the company by making use of the telegraph for expediting the movements of trains, when out of time and held by trains moving in an opposite direction, or by those of a superior class in the same direction.

Upon his recommendation, the Superintendent of the Susquehanna division of the railway was induced to try the experiment, the result of which was that a system was at once adopted by the Superintendents through the line, aided by the General Superintendent, Charles Minot, Esq., which has been so far perfected that the engineers and conductors now actually feel safer and more secure while moving under telegraphic orders than when following their printed instructions; although at the time the system was inaugurated, it was not a little amusing to the operators to witness the alarm manifested by these same men at this innovation upon their old-fogyish views. Indeed, in some instances, so great was their prejudice, that they sacrificed their situations rather than comply with telegraphic orders.

It was about this time that telegraphs upon railways began to be appreciated; for no sooner was it discovered to what uses it was successfully applied upon the Erie road, than all the principal roads throughout the country were supplied with lines; and now a railroad of any length without a telegraph is indeed behind the age.

As an evidence of the regard in which it is held, we quote an extract from the General Superintendent's report to the stockholders, for the year 1855:

"The use of the telegraph is a most important auxiliary in working the road, as, by the rules in force, trains moving in one direction possess positive rights to run without regard to time, or without reference to any opposing train; and an opposing train upon reaching a point whence, by the time-table, it should be met and passed by a train having the right to the road, is not permitted to leave until the arrival of such train; but by the use of the telegraph, conductors in such cases may be immediately communicated with, and directed to move forward, without the slightest danger of collision.

"Without the telegraph, under such circumstances, they would be obliged to remain stationary, or proceed slowly at the most imminent risk.

"*A single track railroad may be rendered more safe and efficient by a proper use of the telegraph than a double track railroad without its aid;* as the double track can only obviate collisions which occur between trains moving in *opposite* directions, while the telegraph may be used effectually in preventing them either from trains moving in an opposite or the same direction.

"I have no hesitation in asserting that a single track railroad, having judiciously located turnouts, equal in the aggregate to one-quarter of its entire length, and a well-conducted telegraph will prove to be a more safe and profitable investment than a much larger sum expended in a *continuous* double track, operated without a telegraph.

"In moving trains by telegraph, *nothing is left to chance.* Orders are communicated to the conductors and engineers of the opposing trains, and *their answers returned*, giving their understanding of the order, before either is allowed to proceed.

"It would occupy too much space to allude to all the practical purposes to which the telegraph is applied in working the road, and it may suffice to say that without it the business could not be conducted with anything like the same degree of *economy, safety, regularity, or despatch.*"

Since the publication of the report from which the foregoing is an extract, the telegraphic facilities have been very much increased. They have now two wires running the entire length of the road, both connecting with one general office in New York. In conjunction with the American Telegraph Company, they have recently laid a cable from New York City to Jersey City, which is in successful operations.

Both of the wires are kept almost constantly busy—most of the time in transmitting messages for the road, although the line is now open to the public, and the revenue derived from paid messages amounts to about $15,000 per year. The expense of operating the line is about $36,000 per annum.

The length of each wire (upon the main line) is four hundred and sixty-nine miles. Beside this they have the Piermont and Newburg branches, making altogether over one thousand miles of line.

One of their wires is divided into sections to correspond with the division of the road; the business of each division being transacted separately from the others. The other they work in one circuit to between New York and Dunkirk, four hundred and sixty-nine miles.

They employ about one hundred operators, seven repairers, twelve messenger boys, and sixty-eight offices—seventeen of which are kept open constantly, both day and night.

They use the Morse apparatus; in the main circuit the Grove battery, and for locals Daniell's improved zinc and copper.

In concluding this description of the use of the telegraph upon one of the best-managed roads in this country, we will say, what strict justice requires, that to Charles Minot, Esq., is due the credit of its conception and completion, in the face of great opposition on the part of other officers of the road, the accomplishment of which has been of inestimable benefit to both the railroad and the public generally.—*Prescott, Chap.* 16.

Leesport and Moselem Railroad.

This road, as projected, extends from Leesport, on the Philadelphia and Reading Railroad, to Lyons, on the East Pennsylvania Railroad, at which places the difference in the elevation of the two roads to be connected is 173 feet, the East Pennsylvania at Lyons being that much higher than the Reading at Leesport; the length of the road by the northern route is 13¾ miles, and by the southern route 12½ miles. The cost of the proposed road by the northern route (including a branch 1¾ miles long to the Moselem ore mines) for masonry and superstructure is estimated at a little over $200,000.

By the southern route the distance is 12½ miles, which, including a branch of a ½ mile to an ore mine and a branch of 2½ miles to a furnace, is estimated to cost, for masonry and superstructure, about $240,000.—*U. S. R. R. & Mining Register.*

Ohio and Mississippi Railroad.

OFFICE OF TRUSTEES OF CREDITORS AND STOCKHOLDERS OF THE OHIO & MISS. R. R. Co. (EASTERN DIVISION),
No. 88 Wall st., New York, July 16, 1860.

The Trustees of creditors and stockholders of the Ohio and Mississippi Railroad Company (Eastern Division), submit the following report to parties in interest, showing the assets already surrendered to the trust created under the agreement of Dec. 15, 1858, as well as the amounts still held outside of the trust, in such bonds, stock, and claims as the holders were invited to surrender.

Under the agreement of December 15, 1858, it was proposed to reduce the bonded debt of the Company to $5,000,000; but it was subsequently deemed best, for the interest of all parties, to invite a further conversion of ALL the construction bonds into trustees' certificates, and on Feb. 25th last, proposals to that effect were made in a circular addressed to the holders of such bonds. This proposal has been promptly and generally complied with.

The total number of bonds, stock and claims thus contemplated to be surrendered for certificates, and eventually converted into stock, were as follows, viz:

In second mortgage bonds	$258,090
Surrendered	45,000
Outstanding	$213,000
In construction bonds	$4,242,000
Surrendered	3,918,000
Outstanding	$324,000
In income bonds	$3,320,000
Surrendered	3,221,000
Outstanding	$99,000
Capital stock	$6,100,000
Surrendered	4,548,000
Outstanding	$1,552,000
Sundry claims estimated at	$570,000
Surrendered	364,500
Outstanding	$205,500

Of the outstanding construction and income bonds, about $30,000 of the former and $25,000 of the latter are reported to be surrendered, but not yet in the trust.

The following statement shows the amounts actually surrendered to the Trust to 1st July instant, of all classes of claims, including past due coupons and interest, as well as premiums on a portion of construction bonds. It also shows the mode of payment for the same by the trustees:

First mortgage coupons	$40,600 00
Second mortgage bonds	45,000 03
Second mortgage coupons	11,760 00
Construction bonds and scrip	3,918,684 73
Construction coupons	590,765 00
Income bonds and scrip	3,221,286 82
Income coupons	340,287 50
Claims against O. & M. R. R. Co., (principally notes)	364,589 98
Accrued interest allowed	94,524 80
Capital stock (representing $4,548,600)	454,860 06
Premiums (allowed on two-third construction bonds)	1,384 479 26
Total	$10,466,788 15
Paid for in cash, furnished by income bondholders	$183,059 02
Paid for in trust certificates, representing above assets	10,283,729 13
	$10,466,788 15

No settlement has been made with the City of

Cincinnati for its claims against the road; negotiations to that effect having thus far failed.

A suit has been commenced to collect the past due coupons, by a portion of the second mortgage bondholders, who declined coming into the Trust. Joseph W. Alsop, Esq., President of the road, and one of the Trustees, has been appointed Receiver. The road is now managed by him, under an order of the Court. As yet no decree of sale has been made; but in the present inability of the road to quash the suit by paying the arrears of interest on the second mortgage bonds, such order will, in all probability, be obtained.

At the time this trust was created there were due by the road for interest, on—

First mortgage bonds	$215,250
Second mortgage bonds	54,180
Construction bonds	445,410
Income bonds	358,600

Since which nearly all the back interest on the first mortgage bonds has been provided for by the road, or by the Trustees; and the interest since due on the same has been paid by the road—that due the 1st inst. by making a temporary loan against accruing receipts.

The interest on the second mortgage bonds is still due. That on the construction and income bonds has been provided for by the trustees, as stated in the foregoing report; so that the road has already, by the action of the trust, been relieved of the immediate payment of interest to the amount of upward of one million of dollars, most of which will be converted into stock, if the plan of capitalization be consummated.

To accomplish the object for which the trust was created, some further delay must be submitted to, that the road may recover from its long embarrassments, and be placed in a condition to be worked with economy and profit.

All of which is respectfully submitted.

By order of the Trustees,

EDWIN BARTLETT, Chairman.

Journal of Constitutional Law.

OF THE INTRODUCTION OF THE COMMON LAW OF ENGLAND INTO THE STATE OF NEW YORK: ITS APPLICATION IN THE ADJUSTMENT OF THE RIGHTS OF INDIVIDUALS AND THE PUBLIC, TO THE NAVIGATION OF SMALL STREAMS.

The Racket river is 160 miles in length. From is mouth to Raymondsville, 20 miles, it is boatable, and has been declared a public highway by legislative enactment; from Raymondsville to Potsdam, 14 miles, which includes the premises of the parties to the suit under consideration; its bed rises 250. The stream is rapid, rough and rocky, and upon it are 12 dams; from Potsdam to Colton, nine miles, its bed rises 400 feet; beyond Colton are lakes, and a stretch of navigable water, 52 miles in length, with only one mile of rapid; the average width of the river is 18 rods; its average rise in freshets is from 3 to 3½ feet; from 1810 to 1850, saw logs, lumber and timber had been floated from two miles above Potsdam to Raymondsville in small quantities; from Colton to Raymondsville the river, in its natural state, is not capable at any season, of being navigated by vessels, barges, lighters or rafts; but during the seasons of highwater in each year, it has capacity for floating to market saw logs and timber in single pieces; from Raymondsville to Colton are nine saw mills in operation some of which make 45,000 feet of lumber per day, which are and only can be supplied with logs by floating them down the river.

The action was for obstructing the passage of logs in this river to the plaintiff's saw mill, which was situated upon its bank, by the defendants who owned the land on both sides of the river two and a-half miles above the plaintiff's place.

The case came before the General Term of the New York Supreme Court upon appeal from the Special Term. The defendants' counsel claimed that the constitution adopted by the State of New York in 1777 expressly retained the common law of England, except as modified by statute; that by this common law, streams that are so small, shallow or rapid as not to afford a passage for the king's people, and are not navigable for boats, or vessels, or rafts, are altogether private property: that where this common law applies to a subject existing in this country, the courts can no more change it, nor disregard it, than they can a statutory enactment or constitutional provision. Of course, if these propositions were absolutely true without any modifications, and if this stream was not navigable as above stated, the right of the defendant to stop the logs in question would be unquestionable. But the Special Term thought differently and held that Racket river in its natural state, being of sufficient capacity in seasons of high water to float logs and timber to market, was a public highway at common law; that the riparian proprietors own the bed of the stream subject to the public right of easement. This decision was affirmed by the General Term. The following is is a portion of the opinion, upon pronouncing the determination of the court.

JAMES, J.—The principle of the common law, as its theory assumes and its history proves, are not exclusively applicable, or suited to our country, or condition of society; but, on the contrary, by reason of its property of expansibility and flexibility, their application to many cases is practicable. The adoption of the common law, in the most general terms, by the government of any country, would not necessarily require or admit of an unqualified application of its rules, without regard to local circumstances, however well settled and generally received those rules might be. Its rules are modified *upon its own principles*, and not in violation of them. The language of the constitutional provision is: "Such parts of the common law as were in force on the 19th day of April, 1775, shall be and continue the law of this State." What parts of that law were then in force here? None, upon the subject now under consideration, except what resulted from our colonial dependence. Upon the principles already stated, so much only of the common law was in force in the colony, by virtue of that relation, as was applicable to the condition of things here. This proposition is sustained by the highest authority. Sir Wm. Blackstone says: "It has been held, that if an uninhabited country be discovered and planted by English subjects, all the English laws then in being, are immediately there in force. But this must be understood with a great many restrictions. Such colonists carry with them only *so much* of the English law, as is applicable to their own situation, and the *condition of the infant colony*." Kent lays down the same rule with repard to the extent to which the common law was applicable in the colonies, and its subsequent adoption by the constitutions of the several States. He says: "The common law, so far it is applicable, has been recognized and adopted as one entire system by the constitutions of New York, Massachusetts, New Jersey and Maryland. It has been assumed by the courts of justice, or declared by statute, with the like modifications as the law of the land. It was imported by our colonial ancestors, as far it was applicable, and was sanctioned by royal charters and colonial statutes."

This apparently qualified adoption of the common law, is nothing more nor less *than an adoption of its essential principles*, the application of which to the condition of things in the new country often requires a modification, if not an entire change, of its rules; but which after all, is nothing more than the result of the application of general principles to particular facts. The principle is essentially the same under all circumstances; but the rule, or mode, or standard of application will vary with the facts, or the nature or the character of the subjects to which the application is made.

Again; when it is said that we have in this country adopted the common law of England, it is not meant that we have adopted any mere formal rules, or any written code, or the mere verbiage in which the common law is expressed. It is aptly termed, the *unwritten law* of England: and we have adopted it as a constantly improving *science*, rather than as an *art*; as a system of *legal logic*, rather than as a *code of rules*. In short, in adopting the common law, we have adopted its fundamental principles and modes of reasoning, and the substances of its rules, as illustrated by the reasons on which they are expressed. * * *

It is the duty of the court in this case, to apply those principles to the Racket river, and determine whether it was susceptible of such use as made it a public highway. Its character must be determined by its capacity for public use; and the extent of capacity requisite to give the public an easement in a fresh water stream, must be ascertained by the application of the principles of the common law to the nature of the subject, and the circumstances under which that application is made. We are not bound to follow the letter of the common law, forgetful of its spirit; its rule instead of its principle. A *rule* of law applicable to the fresh water streams of England, may be wholly inapplicable to fresh water streams in this country of the same nature and character, because of different capacity, or because the adjoining country may furnish a commerce for them unknown in England, and yet be subject to the same *principle*. If so, the common law *modifies its rules upon its own principles*, and conforms them to the wants of the community, the nature, character and capacity of the subject to which they are to be applied.

The defendants insist that, unless Racket river was *navigable*, within the common law meaning of the term, they have the absolute fee in its bed and flow of water. Navigability is not the true test. A *navigable* river, in the common law use of the term is one in which the tide ebbs and flows. In *Ex parte Jennings* the Court say: "By the term 'navigable river' the law does not mean such as are navigable in common parlance. The term has in law a technical meaning and applies to streams, rivers or arms of the sea, where the tide ebbs and flows."

The right of public servitude in a stream depends, not upon its navigability, in the common law sense of the term, but upon its capacity for the purposes of trade, business and commerce. The *Hargrave tracts* define fresh water rivers, deemed public, to be such as float vessels, boats

and lighters. Mr. Bulter, in his notes, says, a river where boats, rafts, etc. may be floated to market, is a public river. In this country, our courts, following the principles of the common law, and adapting them to the subjects presented for their application, have recognized other and still more primitive modes of transportation as evidence of capacity.

The justice then quoted from a number of cases and other authorities, proving this last proposition, among which were the following.

In Putnam *vs.* Mulligan, Justice Thompson said: "It is a fact of public notoriety that the tide does not ebb and flow as high up the Hudson river as the place in question, and therefore the land under water is as much the subject of private grant as the land adjoining the river, *subject, however, to be used by the public for the purposes of boating and rafting, and other objects of this description*, as far as shall be necessary for public use and accommodation."

In Brown *vs.* Scofield, the court says: "Not only in this State, but in all our sister States, these natural channels and avenues of access *wherever they are found of sufficient capacity to float the products of the mines, or the tillage of the country through which they flow, to market*, have always been adjudged by our courts to be subject to the right of passage independent of legislation."

In conclusion the Justice James says: "The fact was fully established, that Racket river, in its natural state, at certain seasons of the year and in a certain way, had capacity and was susceptible of public use, in transporting to market certain products of the country through which it passed; having such capacity and adaptability, it was, according to the principles of the common law, as applied in this country, a public highway. The judgment should therefore be affirmed."

Cumberland River Bridge.

We copy from the Clarksville *Jeffersonian* the following description of a bridge recently erected over the Cumberland river at that place, by the *McCallum Bridge Company* of this city:

The Memphis, Clarksville and Louisville Railroad Company have just completed one of the finest bridges in the country. The bridge referred to crosses the Cumberland river at this place. Its extreme length is 692 feet, divided into two stationary and one draw span. It is built upon three massive piers and two abutments, and has besides two piers up and down the river from the centre pier, upon which the ends of the draw span rest when the draw is open, making altogether five piers and two abutments. The river piers are 75 feet high, and the height from low water mark to the grade line of the road is 85 feet.

The span next to town is 198 feet in length. The span next to the other shore is 218 feet, and the draw span 276 span. The openings of the draw are 120 feet between the piers. There are two other spans of 40 feet each connecting the bridge with the embankment on the Clarksville side.

The plan of the bridge is that known as *McCallum's Inflexible Arch Truss*, which is regarded as one of the very best wooden bridges now known. The draw span is constructed upon an entirely new principle. It is self-sustaining and dispenses with the tower and hog chains usually employed, and is believed to be a very great improvement upon all other draw bridges. The plan is novel, and the draw of the bridge here is the first ever constructed upon this plan. Its success must be a source of great satisfaction to the inventor as well as to Mr. Fleece, the Engineer of our road, who, upon the exhibition of the plan, did not hesitate to adopt it as an improvement though yet entirely untried. The advantage of the self-sustaining draw over those in which the hog chains are employed is that the one is always in its true place, while the other is very materially influenced by the temperature of the atmosphere, which by expanding or contracting the chains either lower or elevates the ends of the draw, requiring constant watchfulness and labor in lengthening or shortening the chains to keep the bridge in correct position.

Texas and New Orleans Railroad.

The following is the report of G. W. R. Bayley, Esq., Chief Engineer, to William G. Hewes, Esq., President of the New Orleans, Opelousas and Great Western Railroad Company, of his examination of the condition and prospects of the Texas and New Orleans Railroad and its Tributary Connections:

ENGINEER'S OFFICE, N. O., OPEL. & G. W. R R. Co., New Orleans, La., July 10, 1860.

WILLIAM G. HEWES, Esq., *President:*

DEAR SIR:—I have just returned from Texas, after having made a tour of inspection of the Texas and New Orleans Railway, and of the railways radiating from the city of Houston. In view of the great importance of the speedy completion of that portion of our road (now in construction) between our present terminus on Berwick's Bay and New Iberia, 45 miles, the following information is submitted:

The Texas and New Orleans Railway commences at New Iberia, 125 miles from New Orleans, by our line, and extends westwardly, through Louisiana, 116 miles to the Sabine river, and thence 106 to the city of Houston; total length, 222 miles.

The line through Louisiana is all under contract, and it is expected that the same will be completed by the close of next year. The Texas division is well advanced, and will be finished during the present year. Nearly one-half of it is completed and in operation already, while the grading of the other half is nearly finished, the ties on hand, and rails, chairs and spikes on the ground.

From a personal inspection of the works in progress, and a knowledge of the energy, capacity and ability of those in charge of this great work, I am convinced of its completion in 1861 to New Iberia.

The immense importance of this great feeder to our road can hardly be over-estimated when we consider the extent of its connections in Texas.

The distance from New Orleans to Houston will be 347 miles. In Louisiana, the Texas and New Orleans Railroad traverses a country which recent developments prove is capital of producing sugar, cotton and corn abundantly, while cattle, sheep, hogs, etc., and lumber, will add largely to its business.

The Bayou Vermillion, the Tortue, Plaquemine, Brusle, Mermenton, and Calcasieu will each be important sections.

The shipments of cotton for the year ending in April, 1860, from the Sabine, equalled 30,000 bales; from the Neches, 15,000 bales; Trinity river, 50,000 bales, while the production nearly doubles itself annually.

The Texas and New Orleans Railroad must do an immense way business, while it will have for its feeder the Houston and Texas Central Railway, to extend from Houston to Dallas and Red river. The road is now completed to Navisota, 70 miles, and its receipts in April last nearly equalled $50,000, while the business in October, November, December and January next is estimated to reach $60,000 per month. The gross earnings for the year commencing October 1, 1860, are put at $600,000 by Mr. Groesbeck, President, and for the year following at $1,250,000. This company will have 82½ miles finished by the 1st of October next, and 125 miles by August 1st, 1861. Dallas is 250 miles from Houston.

The H. & T. Central Railroad will have for its feeder the Washington County Railroad, extending from Hempsted (50 miles above Houston) to Brenham, 22 miles, into one of the richest portions of Texas. Eleven miles of this road are already completed, the grading done, with ties and rails on hand for the balance, only awaiting the erection of the Brazos river bridge, now building.

From Brenham to Austin, 82 miles, the Air Line Railroad Company are now calling for proposals for construction, and as their private subscription is large, the early completion of the road is beyond doubt.

The business of the H. and T. Central Railroad must be very greatly increased by the completion of the Washington County and Air Line Railways. The number of bales of cotton conveyed over this road for the year ending May 1, 1859, was 59,925, and this must have been greatly increased in 1860.

When it is considered that this railroad must be rapidly extended to Dallas, the centre of the wheat region, 250 miles from Houston, and that the Washihgton county and Air Line roads, together 104 miles, will soon be built the vast importance of these feeders to the Texas and New Orleans road, and of *all* to the New Orleans, Opelousas and Great Western Road will be appreciated.

The next great feeder to be considered is the Buffalo Bayou, Brazos and Colorado Railroad, which crosses the Brazos river at Richmond; thence extends to Columbus, on the Colorado, 80½ miles from Harrisburg; thence to La Grange, 28 miles; and thence to Austin, about 140 miles from Houston.

From Columbus, on the Colorado river, another road will run to Gonzales and San Antonio, about 125 miles, and is expected that 25 miles of the road will be built during 1861. The total distance from New Orleans to San Antonio, will be about 550 miles, and there can be but little doubt of the ultimate extension thence to Guaymas, and also to Mazatlan, of this route from New Orleans to San Antonio; thus developing a Southern Pacific Railroad route, which, though possessing merits of a very superior order has not yet been brought permanently before the public.

The entire distance from New Orleans to the Pacific would be about 1,800 miles; the route would afford a lucrative way business throughout its whole length, and its termini on the Mississippi and upon the Pacific coast would be accessible to shipping—a very important consideration.

It remains to notice the Houston Tap and Brazoria Railway, commencing at Houston and extending to Columbia, on the Brazos river, and thence to Wharton, on the Colorado river; also the road from Houston to Galveston, 50 miles now in operation.

The H. Tap and B. R. R. is finished to Columbia, 50 miles, and this portion of the route traverses the rich sugar district of Oyster creek.

It is expected that this road will be completed to Wharton, 88 miles, by the 1st of January, 1861, and from Columbia it is contemplated to extend it to Matagorda. Considering the preceding exhibit of the condition and prospects of the Texas railways radiating from Houston, and the certainty of the speedy completion of that of the Texas and New Orleans Co., to New Iberia, where it will unite with the New Orleans, Opelousas and Great Western, opening at once to New Orleans about 750 miles of finished railway, to be worthy the attion of our Company, and of the citizens of New Orleans, it is respectfully submitted.

Your obedient servant.

G. W. R. BAYLEY, Chief Engineer.

Junction Railroad on West Side of Schuylkill River.

To fill out an unbroken locomotive route along the west bank of the Schuylkill river, between the Reading Railroad at the Columbia Bridge and the Baltimore road at Gray's Ferry Bridge, requires 10,338 feet of new road, less than two miles. Of this distance, 9,000 feet of new road are required between the Pennsylvania Railroad from a few feet east of the bridge over George's Run, near the West Philadelphia Water Works, and the Philadelphia and Reading Railroad, near the Columbia Bridge; and 1,338 feet of new road between the

West Chester Railroad and the Philadelphia, Wilmington and Baltimore Railroad at the west end of Gray's Ferry Bridge.

The whole distance between the Columbia Bridge and Gray's Ferry Bridge is—of new road to be built..... 10,338 feet.
Pennsylvania Railroad to be used .... 6,762 "
West Chester Railroad..... 8,600 "

Total distance 4.8 miles, or.....25,700 feet.
—*U. S. R. R. & Mining Register.*

Railroads in Brazil.

The following statement of railroads in Brazil was prepared by Mr. J. C. Fletcher, who, from a long residence in that country, is thoroughly familiar with the progress of its public works. Brazil, of all the South American States, has what may be termed a stable government, which is fully alive to the importance of constructing railroads through its wide domain.

On the 22d of April last a new railroad was inaugurated in Brazil. The Emperor, Don Pedro II., was present at the beginning of this undertaking, which is to link the rich coffee and sugar regions of Canta Gallo, and, ultimately, of Campos, with the Bay of Rio de Janeiro. In the volume entitled "Brazil and the Brazilians," the general map of the empire and the chart of the bay of Rio de Janeiro will give the various points of departure and destination. Near the mouth of the Rio Macucu, not far from an important town called the Porto das Caxias, is to be laid down the first section of this important iron way. The steamers on the bay ply between Rio de Janeiro and Sampaio, which is but a short distance from Porto das Caxias; and it is probable that the bay, as in the case of the Maua Railroad, (the first opened in Brazil,) will, for many years to come, be the complement of this new highway—thus making connection with the capital city of the empire.

As to the importance of this route, we can only say that thousands and tens of thousands of muleteers and mules are annually employed to bring down to the points of embarkation the rich products of Nova Friburga, Canta Gallo and vicinity. The coffee plantations in the elevated uplands, surrounding these two named towns, rank among the best in the province of Rio de Janeiro. Many of these plantations are owned by Brazilians, but there are some very prosperous establishments whose proprietors are Swiss and Frenchmen. The Baron of New Friburg has immense coffee plantations in the mountains and near the village which bears his name. Between New Friburg and Canta Gallo, there is a fine region of country more thickly settled than the traveler is accustomed to find in Brazil. Such is the amount of cultivation that one is reminded by the scenery of the beautiful and richly tilled valleys of Switzerland. Beyond Canta Gallo, to the river Parahiba do Sul, is a large tract of land under cultivation, and susceptible of still higher tillage, mostly suitable for coffee, sugar, cotton, Indian corn, and the mandioca plant, from which a coarse meal and tapioca are produced. The city of Campos is situated upon the river Parahiba, twenty miles from its mouth. It is surrounded by vast fertile plains, which give the name to the city. The commerce of this place is extensive, and a large number of coasting smacks are employed to transport thence to Rio Janeiro the sugar, coffee, rum and rice, which are brought there from the neighboring plantations. When the new railway is completed to Campos, a distance of nearly two hundred miles, an immense traffic must flow over the line indicated. If an American colony should be formed in Brazil, these salubrious uplands, where the fruits of the tropics and the cereals of the temperate zone may flourish together, would be the proper and profitable spot for such an undertaking.

The above is the sixth railway begun in Brazil. The names of these enterprises are as follows:

Maua Railway, begun in 1852, finished in 1853.

Pedro II. Railway, 1st section, begun in 1855, finished in 1857.

Pernambuco and San Francisco Railway, 1st section, begun in 1855, and finished in 1858.

Bahia Railway, 1st section, begun in 1857, and finished in 1860.

Canta Gallo Railway, begun in 1860.

San Paulo Railway, begun in 1860.

The Maua Railroad runs over the plains which extend from the bay to the base of the Organ Mountains, and is on the highway between Rio and the mountain city of Petropolis, which is a great summer retreat, and where the Emperor has a country palace.

The Don Pedro II. Railway is a main line which is to extend far into the interior from Rio, and is intended to be the Grand Trunk from which many branches will ramify on either side. The first section of this road (about 40 miles in extent) was thrown open in 1857. The second section was offered to contractors the latter part of the same year, and the successful competitor was a Pennsylvania Company. Since that time, this second section, forty-four miles long, and containing the tunnel of Mendez, has been rapidly pushed forward. Hitherto American enterprise in Brazil has been far below that of the leading nations of Europe. Remunerative contracts, requiring skill and energy, were constantly obtained by Englishmen, Germans, Frenchmen, and even Portuguese, but Americans had no fair play until the railway system of Brazil was matured. Their experience with single lines in a new country was just what Brazil required. It was then that Col. Charles F. M. Garnett, of Virginia, was employed as engineer-in-chief; and more of our countrymen have thus been led to Brazil than ever before. Col. Garnett, we understand, has returned to the United States, but American skill and enterprise are now better known and appreciated in Brazil than formerly, and if our countrymen are wide-awake to their own interests, they will not neglect the opening there.

The tunnel of Mendez is a stupendous undertaking. Those who, from the city of Rio de Janeiro, have gazed upon the Alpine peaks which surround that city, will have some idea of the difficulties in the way. But, once over this mountain range, we find a country resembling the more level portions of Pennsylvania. The transportation from these uplands has hitherto been by the slow, expensive and painful means of mules, down steep narrow paths which cannot be found out of South America and Spain and Thibet. The tunnel of Mendez pierces this mountain range, and will be, when finished, 7,200 Portuguese feet, which are equivalent to one mile and a half English. Up to the 1st of April, this year, 180 feet had been excavated at the southern entrance, and 190 feet at the northern, (in all 370 feet;) and besides this, three immense shafts have been sunk at different places from the summit of the mountain, so that a steam engine is enabled to pump off thousands of gallons of water, which, otherwise, would greatly impede the laborers in the horizontal works. The tunnel is wholly made through a rock which the Italians call *granitilho*, which differs from primitive granite in being more friable, and more easily affected by powder. The contractor says that he will soon be in condition to have his forces disembowel the mountain at the rate of 45 or 50 feet per month, which would ensure the completion of the tunnel in less than two years.

Turning to the north we find, 800 and 1,200 miles away from Rio de Janeiro, the Bahia and San Francisco and the Pernambuco and San Francisco Railroads. They have the same end in view, *i. e.*, to tap the present and future commerce of the rich valley of the San Francisco and the intermediate region. If any one will examine a map of Brazil, he will see the very great importance of these two railroads. The river San Francisco, which is as large as the Volga, falls into the ocean near ten degrees of south latitude, but for nearly three hundred miles from its mouth is interrupted by a series of rapids, ending with the falls of Paulo Alfonso, an immense cataract over which the river madly plunges. This interruption to navigation ceases near a point called Joazeira, which will be found clearly indicated in the map already referred to. Now above Joazeira, to the mouth of Rio das Valhas, in the Province of Minas Geraes, there are, on the San Francisco alone, seven hundred miles of direct steamboat navigation, and when we consider the various affluents, there must be more than as many more miles. In fact, the San Francisco is the largest river emptying into the Atlantic between the La Plata and the Amazon. It rises in the rich province of Minas Geraes, and waters the fertile soil of the important provincial divisions of Bahia, Pernambuco, Sergipe and Alagoas—the very garden of the Brazilian Empire. The cities of Bahia, San Salvador (130,000 inhabitants) and of Pernambuco (80,000), are contending for the trade of this basin. Both have planned railways to Joazeira, and both have some miles in running order, but great energy will be required to push these roads through the distance of more than three hundred miles. Such, however, is the necessity for these iron ways, through a most fertile tract of country, (where, as on the Pernambuco road, one may count in 70 miles three hundred sugar plantations,) that their completion is only a question of time.

The San Paulo Railway, all of whose stock has been taken, and the money obtained in London, will lead from Santos (a hundred miles or more south of Rio) to the city of San Paulo, the capital of the flourishing province of the same name. Its ultimate terminus will be further inland. Santos is the port for the great coffee region of Southern Brazil, and there is no doubt, from the prosperity of the Province of San Paulo, and the great demand for her productions, that the railway will be a profitable one. San Paulo would be an excellent portion of the empire for Americans to establish themselves for the cultivation of Indian corn, &c.

The Brazilian Government guarantee a certain per cent. to the stockholders of all, or nearly all, of these railroads. The enlightened policy of the intelligent head of the empire, and the peace, which is the normal condition of Brazil, speak much for the advance of that country, and make it stand out in bold contrast with the ever-heaving, revolutionizing, Spanish-American Republics.

Of other railways in South America, there is a short one in operation in the Province of Buenos Ayres, and another of a few miles is projected from the city of the same name to a navigable point for large vessels on the La Plata. In Chili, through the far-seeing policy of Wm. Wheelwright, Esq., an American, originally from Newburyport, the first railroad of any length in South America was opened. This is the important Copiapo Railroad, which is situated in one of the richest mining districts in the world. The second railroad (of which now many miles are opened) is to connect Valparaiso and Santiago, the capital of Chili. This road will do much to develop and enlighten the best of the Spanish Republics. In Pern there is but one little railway, leading from Callao to Lima, a distance of seven miles. We believe that these comprise, with the Panama Railroad, the ironways of South America, although we have a faint impression that one has been projected in English Guiana. Railroads on the Pacific coast will always be difficult of construction, but in the Argentine Confederation and the Empire of Brazil the natural difficulties are no greater than in our own land.

Henderson and Nashville Railroad.

We learn from the Henderson (Ky.) *Mail*, that work has been commenced upon this road, a large force being enjoyed in preparing the road bed for the ties and rails. A large supply of chairs and spikes have already been delivered, and more are daily expected. The *Mail* says:

It is perhaps already pretty well known that Todd county has voted a tax in favor of the road; a vote will be taken in Christian county on the first Monday in August to get the sense of the people in regard to assessing a tax to pay for the construction of this road through that country; and we are creditably informed that there is not the least reason to doubt but that a tax will be voted for by a large majority.

General Railroad Intelligence.

The Morris Canal is 102 miles long, beginning on the Delaware river opposite Easton, and ending on the Hudson river at Jersey City; the rise and fall between its levels is 1,674 feet; its summit level is 915 feet above tide-water; from the summit to the Delaware river the descent is 759 feet; of its total rise and fall, 235 are overcome by locks, and 1,439 feet by, we believe, 22 inclined planes.

The long pending negotiation with the European holders of the mortgage bonds on the Northern Cross Railroad of Illinois, on the part of the Chicago and Burlington Company, who lease the line, is finally brought to a close. The settlement is substantially as follows: The Chicago, Burlington and Quincy road assumes $1,200,000 first mortgage bonds, substituting their own 4½ per cent. debentures, interest payable at Frankfort, O. M., for the original 8 per cent. bonds; the overdue interest on the latter, now amounting to about 20 per cent., being waived by the holders. The Northern Cross road is one hundred miles long, extending from Galesburg and Quincy, and has an entire incumbrance of $20,000 per mile, the above $1,200,000 first mortgages, and a second lien of $800,000.

The Baltimore *Sun* says that proceedings have been instituted in the United States District Court, in the names of one or two private stockholders of the Baltimore and Ohio road, residents outside of the State, with the view of procuring a further injunction upon the balance of the dividend not yet paid out. The Judge (Giles) being absent, has fixed the case for a hearing on the 13th of August, and notice having been served to this effect, the company suspend further payment of interest or issue of scrip until the hearing is had.

The publication of the "points" upon which the Canal people hope to recover five millions of the New York Central road, says the New York *Express*, relieves its shareholders from all anxiety, and convincing them that it is a stock jobbing movement. If the road is to pay five millions for the privilege of taking freight at low rates, it has a counter claim quite as strong upon somebody for the one cent. extra per mile upon passengers, which it had a right to demand. This company, so far as tolls and fares are concerned, has been just to the public, and cannot in equity be required to return tolls from which they were relieved in good faith.

The Lynchburg *Virginian* says that arrangements have been perfected by which cotton will be transported over the railways from Memphis to Lynchburg, and via the Alexandria and Lynchburg Railroad through Alexandria to New York in the steamers of the New York and Virginia line. It is believed that before the end of this year one hundred and fifty thousand bales will take this route to New York. This vast amount of tonnage will add immensely to the receipts of the roads of the line. One hundred and fifty thousand bales—the number which it is supposed that will take this route—will give the vast amount of seventy-five millions of freight. The price fixed on a bale through is, we believe, $3.50—the aggregate of which on 150,000 bales would be $525,000, which is a sum not to be lightly thought of by any means."

The ceremony of breaking ground on the Kansas end of the Pacific Railroad, took place on the 25th ult. The occasion was most appropriately celebrated by salutes, bonfires, barbecue festivities, and speeches from the most prominent and thorough-going railroad men of the West, including Mayor Waughs, Col. Doniphan, Col. Gilpin, Mr. Taylor, President of the road, ex-President McPherson, Gov. Roberts, of Kansas Territory, and many others. It is estimated that there were at least ten thousand people on the ground, all of whom were enthusiastic over the great work.

The Albany *Journal*, of 31st ult., says: "There was an adjourned meeting of railroad officers at Saratoga Springs on Saturday. Among those present we noticed Mr. Garrett, of the Baltimore and Ohio; Mr. Thomson, of the Pennsylvania Central; Mr. Brydges, of the Canada Great Western; Mr. Chapin, of the Massachusetts Western; Mr. Rice, of the Michigan Central; Mr. Osborn, of the Illinois Central; Mr. Marsh, of the New York and Erie; Mr. Vibbard, of the New York Central, &c. The Convention resumed the question of freights, and occupied the day in revising their tariffs, reaching finally a result satisfactory to all. Freight upon all these trunk lines will be immediately raised and maintained. The rates fixed are remunerative. Working, as it is reasonable to expect, up to these rates during the year, railroad property will prove a less ruinous investment that it has been for three or four years past. Western roads, if honestly managed, may now hope to resume the payment of dividends."

The Panama *Star*, of 4th ult., learns that "the Congress of Costa Rica has voted $10,000 for a survey of the Atlantic coast, in the hope of discovering a secure harbor. Mr. Thomas F. Meagher (for A. W. Thompson and associates) has concluded a contract with the Government for the construction of a railroad between Boca del Toro and Punta Mala; the privilege is for ninety years. It is thought that Congress will confirm the concession with certain modifications. A motion was in second debate before the Congress to annual the yearly subsidy granted by the Mora administration to the Panama Railroad Steamship Company. The railroad grant made by Mr. Farrer for a road from Punta Arenas to San Jose, has also been repealed."

Mr. Kennard, the English engineer of the Atlantic and Great Western Road, says: "I expect within a few days to receive orders to start the work on the Ohio portion of the line. I have the satisfaction to state, from practical experience, that the estimates I have made are sufficient, both as to amount and time, and should the instructions to which I refer arrive as expected, I see no reason why the Atlantic and Great Western Railway may not reach Akron early in 1861, and Dayton within the same year."

The Attica *Ledger* says an effort will be made to have the Evansville and Crawfordsville Road extended northward from Rockville to Attica. The Legislature some three years ago, gave the company owning the charter of the road the power to make Attica the northern terminus of the line, if it was deemed expedient or advisable to do so.

A new company has been organized, under the name of the "Northern Illinois Railroad Company," who propose to extend the Racine and Mississippi Railroad, now finished to Freeport, to Savannah, on the Mississippi River. Dr. C. Martin has been elected President.

The ordinance of the Baltimore Common Council to endorse $500,000 of the bonds of the Western Maryland Railroad has been approved by the Mayor. The ordinance, provides that $500,000 of the dividend bonds of the Baltimore and Ohio Railroad be set aside to meet any contingency which may arise in the prompt payment of the interest of the bonds endorsed.

There is a dispute as to which of the two Receivers of the property of the Milwaukee and Horicon Railroad Company—who have lately been appointed—are entitled to possession. The *Berlin* (Wisconsin) *News* says that Mr. Ward, now in possession, was appointed by the United States District Court for the purpose of satisfying a judgment obtained in that Court in December, 1858, by Joseph B. Fielin. Mr. E. B. Wolcott is the other Receiver, appointed by the State Court under a judgment obtained by Mr. H. Gelpcke.

The Norfolk *Day Book* says that "the result of the recent railroad conferences at Old Point and Lynchburg has been to reduce freight of all kinds to the same rate, via East Tennessee, Virginia and Tennessee, Southside and Norfolk and Petersburg Railroads, as charged from Savannah coastwise to New York. The effect of this arrangement will be to place cotton on our wharves for $3.50 per bale from Memphis, and will give all that article intended for foreign shipment an advantage of sixteen days over the New Orleans market. In other words, cotton shipped from Memphis to Europe, via Norfolk, will reach Europe as soon as it now reaches New Orleans."

Since the 1st of July, the city authorities of Cincinnati have paid the interest on six hundred thousand dollars of Ohio and Mississippi Railroad bonds, on one hundred and fifty thousand dollars of Eaton and Hamilton (Hamilton, Eaton and Richmond), bonds, and one hundred thousand for the Covington and Lexington.

It is proposed in Prince George's county, to run a branch of the projected Baltimore and Potomac Railroad from Marlboro' to some point opposite Alexandria, on the Potomac shore of Maryland. Mr. Oden Bowie publishes a card in the Marlboro' *Advocate*, strongly advocating the construction of the branch.

The Milwaukee *Sentinel* says the rolling stock of the La Crosse road has been increased fifty per cent. over last year, and all the facilities of their extensive shops in Milwaukee are now in active operation, turning out new freight cars at the rate of four per week, and putting old ones in good order. They have recently purchased three locotives and fifty freight cars, and have already built twenty-five cars at their own shops.

Columbus and Xenia Railroad.

This company is now building a large Freight House at Columbus, a new Station House at West Jefferson, will erect permanent stone or iron bridges over Darby and Deer Creeks within the next year, and an extension of the double track from Columbus some miles west, will soon be required. Construction upon a prosperous road must go on as its traffic increases, and like increased facilities for doing business on the streets of a prosperous city, is an inexorable demand upon its income or upon its capital. With the large income of the Columbus and Xenia Company these improvements might be made from current earnings without trenching upon the usual dividend of eight per cent. per annum. But the floating debt of the Company, which consists of construction bonds, amounting in the aggregate to about two hundred thousand dollars, fall due in December, 1860-61-62 and '66, and must of course be promptly met. This is all the indebtedness of the company. Under these circumstances we understand the Board of Directors have determined to retire their outstanding bonds and also provide a fund for some of the present improvements contemplated, as well as such as may from time time hereafter be required, by the issue of six per cent. bonds, payable in New York in 1890, and secured by first mortgage. The Board limit the amount to be negotiated at this time to one hundred thousand dollars, which will cover the bonds due in December, 1860, and build a stone bridge over Darby Creek. The ultimate issue under any circumstances is limited to five hundred thousand dollars; this amount will so far cover all permanent improvements and new structures which may be hereafter required, as to insure beyond any contingency an eight per cent. dividend, and under ordinary circumstances a surplus as a sinking fund. Indeed the contract of union between this company and the Little Miami, requires real estate and all permanent new structures and improvements, to be made by such company from individual means after paying dividends.

The Board of Directors of the Columbus and

Xenia road have, therefore, adopted a policy just to stockholders by turning their floating construction bonds and permanent construction expenditures hereafter incurred, into a funded debt. Three hundred thousand dollars will pay for all the improvements at present contemplated, and also the bonds now outstanding. This is a small sum when compared with the income of the road. This by the way, has been, for the last six years, as follows:

	Gross Earnings.	Net Earnings.
1854	$340,781 37	$168,949 29
1855	356,366 53	151,368 89
1856	419,245 00	197,721 62
1857	403,755 69	145,060 44
1858	414,590 01	170,795 91
1859	438,414 24	153,767 86

It will be observed that the earnings of this company have increased, notwithstanding the failure of crops, competition for traffic, and the reduction of rates, the gross earnings being last year larger than ever before. The present year, so far, shows an increase over the corresponding period of 1859, although the freights of the Ohio and Mississippi, and about half its passengers have, since the contract with the Cincinnati, Hamilton and Dayton Co., been carried by way of Dayton and Xenia, in pursuance of the policy which dictated that contract.—*Cin. Com. 25th.*

Central Railroad of New Jersey.

The following is an abstract of the statement of this company for the six months ending June 30, 1860:

	1860.	1859.	Increase.
Receipts	$568,837.03	448,174.80	120,662.14
Expenses	225,356.06	178,236.66	47,119.40
Net earn'gs	$343,480.97	269,938.23	73,542.74

Coal tonnage.	1860.	1859.	Increase.
Lackawanna	274,258	200,284	73,974
Lehigh	132,234	70,642	61,592
Total (tons)	406,492	270,926	135,566

Cash balances, &c.	$268,849 07	
Less accounts payable.	44,532 01	
		224,317 06
		$5,970,678 01

The net earnings for the six months are thus shown to be $343,480 97. After deducting the balance of the interest account, including the interest accrued on the bonded debt but not yet payable, there remains as a dividend fund $219,928 01, equal to 6 per cent. on the increased stock. Out of these earnings the board declared and have since paid a dividend of five (5) per cent. for the six months ending June 30. The dividends will hereafter be made quarterly, on or about the 15th day of October, January, April and July.

Since the annual report of January 1st, the bonded debt has been reduced $900,000 by the direct conversion into stock of that amount of second mortgage bonds, under the privilege which expired June 30th. All other debts, $245,000, outside of the first and second mortgage bonds and the ordinary accounts current were extinguished by an arrangement with the holders of second mortgage bonds, which otherwise would have been presented for conversion, by which such bonds were exchanged for these debts, and the latter were presented for stock and extinguished in place of the former, the interest being so adjusted as to make the result to the company in every respect precisely the same. It this way a larger bonded debt was left in existence, but all other liabilities were extinguished, and any necessity for a further issue of stock obviated. By these operations, and by the receipt of $58,000 on the scrip stock, the capital stock has been increased $1,188,000. The debt has been reduced $1,145,000, and will be further diminished $100,000 on the 1st of August, by paying of that amount of first mortgage bonds, leaving the debt $2,000,000.

Railroad Earnings.

Subjoined is the report of Joseph W. Alsop, Esq., Receiver of the Ohio and Mississippi Railroad Company, for June, 1860:

To balance on hand from May acc'nt		$21,048 65
RECEIPTS.		
From U. S. Mail service to 31st March.		$9, 301 85
" Passengers and freight earnings in May		$18,036 96
" Adams' Express		3,037 50
		$30,376 31
" Passengers of June earnings	$32,331 28	
" Freight do.	18,740 05	
		51,071 33
" Other sources		5,897 33
Total funds		$108,393 62
DISBURSEMENTS.		
On account 1st mortgage bonds coupons of January 1, 1860.	$5,005 00	
Interest and discounts	567 46	
Office and other expenses	666 29	
Charges advanced on acc'nt with other roads	3,519 48	
On account of current operating expenses and construction in May	63,111 22	
On account of former arrearages prior to May 1st	630 35	
On account of June current expenses	1,869 81	
		75,389 11
Balance on hand carried to July acc't.		$32,004 51

From the report of Wm. K. Bond, Esq., Receiver of the Cincinnati, Wilmington and Zanesville Railroad, we learn that the gross earnings for June were $14,019 30
And the disbursements $14,467 88

Excess of disbursements $448 58

The cash receipts were $17,062 73. The liabilities contracted by the present receiver, and remaining unpaid, $13,128 91. The debts due the road, which have accrued during the receivership, $11,017 63.

The gross earnings of the Panama Railroad Company for June were:

From Passengers	$50,933 00
" Freight, merchandise	42,245 51
" Freight, treasure	11,623 01
" Mail transportation	8,333 34
Total	$113,134 86
Gross receipts for six months ending June 30th, 1860	$860,845 00
Gross receipts for do., 1859	873,795 00

The following is a comparative statement of the freight earnings of the Pittsburg, Fort Wayne and Chicago Railroad for the past four months, with the same months 1859:

	1860.	1859.	Increase.	p.ct.
March.	$108,200 78	$72,124 02	$36,077 76	or 50
April..	99,002 55	54,372 47	44,630 08	or 82
May ..	98,561 66	51,374 96	44,086 70	or 80
June ..	82,909 17	50,982 85	34,926 32	or 57½

The receipts of the Grand Trunk Railway of Canada for the week ending July 14, were $55,393 00
Week ending July 16, 1859 39,401 78

Increase in 1860 $15,991 22
Total traffic from July 1st, 1860 $107,147 37
Same period last year 79,109 72

Increase $28,037 65

Cincinnati Stock Sales.

Louisville and Nashville Railroad.

From a pamphlet recently published by the officers of the Louisville and Nashville Railroad, we learn that the indebtedness of the main line of this road is as follows:

First mortgage 7 per cent. bonds	$2,000,000
Tennessee State Aid, 6 per cent. bonds.	555,500
Last Sub. Louisville, 6 per cent. bonds, the company agree to pay	1,000,000
Louisville City 6 per cent. bonds for Lebanon branch, company agree to pay	225,000
Lebanon branch income 7 pr. ct. bonds.	175,000
Floating and postponed debt	400,000
Mortgage 7 per ct. bonds for Memphis branch	300,000
Total	$4,655,500

The Directors of this road estimate that the fiscal year ending August 31, ultimo, will exhibit the gross earnings of the main line and Lebanon branch at about $640,000, estimating them for the last four months of the year by the average of the first eight, which was about $2,800 per mile. The first two months of the year there was no through connection to Nashville, as the road was not completed. It is expected that the Memphis branch will be completed to Clarksville, Tenn., by October 1, and through to Memphis by the 1st March. When this is completed, the Directors estimate the earnings of the entire line for the next fiscal year, at $810,000, or $3,000 per mile per annum. The road has heretofore been operated for a fraction less than one-half the gross earnings, and it is estimated that it may hereafter be operated for one-half the earnings. The line is under the careful and capable management of JNO. B. ANDERSON, late of the Pittsburg, Fort Wayne and Chicago road. The length of the main line is 185 miles, of the Lebanon branch 37½, and of the Memphis branch 47½, being an aggregate of 270 miles.

Railroads of the State of New York.

American Railroad Journal.

Saturday, August 4, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

New York Central Railroad.

The people of New York are in many respects a very curious set. One would naturally suppose that all classes would cherish and protect with sedulous care the authors of their prosperity—the public works of the State. Among the most valuable of these is the New York Central Railroad. The cities of Philadelphia and Baltimore both claim a decided advantage over New York on the score of geographical position—in lying nearer to the districts from which the commerce of all is in a great measure derived. The New York Central Railroad neutralizes this advantage in the energy and ability with which it is managed. Distance is measured by the time necessary to overcome it. By this test the city of New York is as near any point in the West as is Philadelphia or Baltimore.

Is this advantage purchased by any sacrifice whatever? None that we ever heard of. Every year are the charges on freight, and the time required for its transit, reduced. This is the very climax of excellence of railway management as far as the public are concerned. As regards the Central Railroad, its stockholders make no complaints that their dividends are not satisfactory.

With these premises, which no one will dispute, it would seem hard to find cause of offence. It certainly cannot be a public one—as with this road the rule is, rapid movement, low rates, and good dividends. The grievances, if any exist, must be private ones—in other words, parties are attacking the road with no other object but plunder, or to promote some selfish end. Last year the Canal forwarders sought to lay a heavy tax upon it, as the means of putting a corresponding sum into their own pockets—to add largely to the cost of transportation on every ton of merchandise coming to

New York, as a mode of increasing their own gains. Foiled in this, an attempt is now to be made to compel the company to pay into the Treasury of the State some fabulous millions, being the amount of canal tolls released many years ago. We presume there is not a pretence that such a claim can be sustained. It is alleged that the canal revenues were pledged by the Constitution of the State for specific objects, and that the tax imposed upon railroads were revenues of the canal! Such is the stretch of reasoning upon which the present claim is based. Were the revenue once derived from the railroad so pledged, only one party, the *creditors* of the State, the holders of this alleged security, have any right to complain. We have not heard of any intimation of this kind from them. They are the only persons that can be made parties to the threatened suit.

The object of all these attacks upon the Central can be summed up in a word—plunder. They are powerless now, because fully exposed. The enemies of the road commenced their attacks last year, with a majority of the Legislature in their favor, backed by all the personal and political influence that the Governor could exert. Time was gained, and with it their ignominous defeat. The thorough ventilation of the whole subject left the company in an infinitely stronger position than when the foray upon it was commenced. We take it the threatened suit is the last gun to be fired by the routed and retreating forces.

The Electric Telegraph.

Messrs. TICKNOR & FIELDS, the enterprising publishers of Boston, have favored us with an early copy of a new volume entitled "*History, Theory and Practice of the Electric Telegraph.* By GEORGE B. PRESCOTT, *Superintendent of Telegraph Lines.*" It is dedicated to CYRUS W. FIELDS, Esq., to whose indomitable energy and perseverance Science is indebted for the practical demonstration of one of the greatest achievements of ancient or modern times. The subject is essentially a new one to literature, and hence such a book treating alike of the scientific and practical development is highly acceptable. The American has a pre-eminent right to feel proud on this subject: his countryman was the first to invent the recording telegraph and the instruments furnished by American genius are still the most successful. On these points the work demands justice, and unravels the web of controversy with which the rival claimants to the discovery of the principles involved, have enveloped the truth of history. Otherwise, the general features of the volume are sufficiently detailed in the publishers' advertisement (*which see*). We have also taken the liberty to transfer to our columns the 16th chapter, treating on the practical uses of the telegraph on railroads. The work is abundantly illustrated with wood cuts.

Hannibal and St. Joseph Railroad.

The Cincinnati *Enquirer* states that Mr. J. T. K. Haywood, Superintendent of this road is now at the East for the purpose of negotiating for the iron necessary for laying a branch track from Cameron to Kansas City, a distance of thirty-six miles. About twenty-four miles from Cameron, another branch track will be extended to Leavenworth, a distance of 28 miles. The road-bed is nearly graded for the Kansas City branch, and the design is to have the track-laying completed, so that the road may be put in operation by March next. Kansas City has subscribed $250,000 to the project, and the business men of the place look forward with much interest to the completion of the line.

The Victoria Bridge Medal.

A medal, designed by Wyatt of London, has been struck in commemoration of the opening of the Victoria Bridge, on the Grand Trunk Railway of Canada by the Prince of Wales. On the obverse in relief are the Canadian arms, surmounting a view of the great bridge, and the legend, "The Victoria Bridge Medal—Grand Trunk Railway of Canada. The Victoria Bridge, Montreal. The greatest work of engineering skill in the world, publicly inaugurated and opened in 1860." On the reverse are the English coat of arms, with medallions of Queen Victoria, the Royal Consort, and their son, the Prince of Wales, and the legend, "The Victoria Bridge consists of 23 spans, 242 ft. each, and in center 330 feet, with a long abutment on each bank of the river. The tubes are of iron 22 feet high, 16 feet wide, and weigh 6,000 tons, supported on 24 piers, containing 250,000 cubic feet; extreme length two miles; cost $7,000,000." Copies of the medal in full gold and white metal are for sale at TIFFANY & Co.'s, 550 Broadway, New York.

Western Telegraph Lines.

The Missouri and Western Telegraph Company have extended their line to Fort Smith, on the extreme western border of Kansas, 500 miles southwest of St. Louis, on the Butterfield overland mail route, and is now open for business. This line is a section of the contemplated line to California, by the southern route, and in conjunction with the line nearly finished from San Francisco to Los Angelos, a distance of 500 miles, and the overland mail will furnish a speedy and reliable communication between the Atlantic and Pacific coasts.

The line by the northern route is being rapidly pushed forward, and will be completed to Omaha, in Nebraska, about the middle of August, thence it will be built directly west toward the gold fields of Kansas, and will reach Fort Kearney, nearly 200 miles from the States, on the route of the Pony Express and California mail, by the 1st of November.

Railroads in Texas.

We learn from the *Civilian* that the Houston, Trinity and Tyler Railroad Company have purchased 1,050 tons of iron imported from England, by Messrs. R. & D. G. Mills. Twenty-five miles of the road will be put under contract as soon as the point of connection with the Galveston, Houston and Henderson road is determined upon, which will be some time during the present week.

At a meeting of the citizens of Colorado county, held on the 12th inst., for the purpose of devising ways and means for building a tap road from Alleyton to Columbus, the citizens subscribed $20,000, and the Harrisburg Railroad Company $10,600 toward the work. Only $10,000 more is needed.

The State *Gazette* says, that the Memphis and El Paso road in Texas is now preparing to build a central branch from Jefferson, Cass county, to the terminus of the road in Bowie. It is expected to complete this part in 18 months. We are glad to note this movement. It is just what is needed to give impetus to the building of the Memphis and El Paso road.

Interest on Stocks, Bonds, etc.

The coupons of the 1st mortgage bonds of the Central Railroad Company of New Jersey, will be paid at the Company's office, No. 69 Wall st.

The bonds of the American Iron Mountain Company of Missouri, maturing 31st instant, will be paid at the office of P. Chouteau, jr., No. 35 Broadway.

The Michigan Southern Railroad Company announce that the interest due August 1st on the following bonds will be paid on presentation of the coupons at the Corn Exchange Bank, viz:

On $985,000 Northern Indiana firsts	$34,475
On $1,287,000 Goshen Branch	45,045
On $195,000 Jackson Branch	6,825
On $360,000 Detroit Branch	12,600
Total	$98,945

The bonds of the New Jersey Railroad and Transportation Company, due August 1, will be paid at the Bank of Commerce.

The coupons due August 1st on the 1st mortgage bonds of the Philadelphia and Sunbury Railroad Company will be paid on and after that date at the Bank of Commerce, Philadelphia.

The Fairmount (Philadelphia) Passenger Railroad Company (Race and Vine) have declared a dividend of $2 per share for the past six months, payable on and after Tuesday, August 7th.

The directors of the Fairmount and Arch Street (Philadelphia) Passenger Railway have declared a dividend of $1.50 per share for the past six months, payable August 7th.

The Supreme Court of Alabama has given a decision which affirms the validity of the bonds issued by the city of Mobile to the Mobile and Great Northern Railroad. The right of the city to levy a tax for the payment of said bonds is also sustained.

The State Treasurer of Pennsylvania has arrived in Philadelphia, with the funds to pay the semi-annual interest on the State debt, due to-morrow. The inscription will be paid at the Farmers' and Mechanics' Bank, and the coupons at the Girard Bank.

Insurance Dividends.

The Lamar Fire Insurance Company has declared a semi-annual dividend of four per cent., payable on demand. The Washington Life Insurance Company a semi-annual interest dividend of 3½ per cent., payable August 1. The Beekman Fire Insurance Company a semi-annual dividend of five per cent., payable on demand. The Exchange Fire Insurance Company a semi-annual dividend of 6 per cent. payable on demand.

Bank Dividends.

The Bank of the Manhattan Company has declared a semi-annual dividend of five per cent. payable on the 10th of August. The Nassau Bank of Brooklyn has declared a dividend of four per cent. The Bank of the Republic has declared a dividend of 5 per cent. payable August 13th. The Long Island Bank at Brooklyn pays on demand a dividend of 5 per cent. The Ocean Bank has declared a dividend of 3½ per cent. payable on demand. The St. Nicholas Bank a dividend of 3 per cent. payable August 13. The Newark

City Bank 5 per cent., and the Mechanics' Bank of Newark 5 per cent. The Marine Bank a semi-annual dividend of 3 per cent., payable on the 13th of August. The Brooklyn Bank a dividend of 5 per cent.

Southern Illinois Railroad.

The Cincinnati *Enquirer* says that the iron for the first 25 miles of this road, extending from Vincennes to Mound City, has been procured, and that the track-laying will soon commence. The road-bed is graded for a large portion of the distance, and parties have gone East for the purpose of contracting for the iron for fifty additional miles.

Atlantic and Great Western Railroad.

We regard the completion of the Atlantic and Great Western Road from Little Valley, on the N. Y. and Erie road, to Union Mills, 73 miles, where a junction is made with the Sunbury and Erie road, as a certainty to be realized in the early part of next Spring. And there are the strongest probabilities that the road will be continued over the line located and partially graded several years since, between Little Valley and Dayton, whence, under an existing contract with the Cincinnati, Hamilton and Dayton Co., it will be brought into the Cincinnati Depot of the Ohio and Mississippi Co., by means of a third rail laid in the same manner as that between this city and Lawrenceburg, for the accommodation of the St. Louis wide gauge and the Indianapolis narrow gauge cars. The magnitude of this Atlantic and Great Western enterprise is very imperfectly understood here in Cincinnati, because of the doubt that has heretofore hung over its construction. As these doubts are dissipated by the authentic intelligence lately laid before the readers of the *Commercial* of the vigorous prosecution of the work, and the abundant means which enables the Company to purchase everything with cash in hand, we are more and more interested in this greatest of the Grand Trunk lines, on which Cincinnati is to be a principal point, and over which, a loaded car may pass from St. Louis to the ship's side, at the Long Dock of the Erie Co., in Jersey City. The work is progressing under the superintendence of an English engineer, Mr. KENNARD, of London, whose visit to this city a little more than a year since will be remembered by many of our Railway friends. The work is contracted to be completed at a cost of thirty-three thousand five hundred dollars per mile, and we may presume that in thoroughness of construction its permanent way will more nearly resemble Canadian than American lines. The point (Little Valley Station) on the New York and Erie at which the Atlantic and Great Western commences, is 421 miles from New York, and 1,390 above the level of tide water (Lake Erie being 582 feet above the level of tide water); and, saving the heavy grade to unite with the Lake Shore line, it runs easy grades to Union Mills, in Pennsylvania, 73 miles from the junction with the New York and Erie; at Union Mills it connects with the Sunbury and Erie Railroad, thus giving the New York and Erie direct access to the fine harbor at Erie, on the lake. From Union Mills to Warren is 77 miles; here the Atlantic and Great Western will connect with the Cleveland and Mahoning, and so run direct into Cleveland without change. From Warren to Akron is 47 miles, and then the Erie can receive flour from the Ohio Canal, and deliver it without transhipment to the Long Dock property. From Akron to Mansfield is 65 miles, and here will be the only change of cars between New York and Chicago; the Pittsburg, Fort Wayne and Chicago running from Mansfield direct into Chicago. From Mansfield to Galion, on the Cleveland, Columbus and Cincinnati, is 14 miles, and here the Bellefontaine and Indiana will connect with New York. From Galion to Dayton is 102 miles, and, completed thus far, the cars of the New York and Erie can run to Cincinnati by means of the "third rail" already mentioned, and hence to St. Louis, 340 miles, the whole distance being one unbroken gauge.—*Cincinnati Commercial.*

Minot's Ledge Light House.

It is announced that this light-house will be completed and lighted up in September next, by one of the first order of "Fresnel lights." The last stone of the building was laid upon the 29th of June, and when all is finished as designed, it will be one of the grandest achievements in the world, not even excepting the far-famed Eddystone in the English Channel. The first blow struck upon the rock where this light-house has been erected, was on the 12th of June, 1855. The old iron light-house was carried away by the fearful storm of April, 1851. It is a remarkable fact that no accident of any kind befel the workmen during the years that the Minot's Ledge structure has been in progress.

The strength and stability of the tower on the Minot's Ledge may be known from the fact, that during all the numerous and severe storms of last Winter it stood exposed to the merciless pelting of the waves of the wild Atlantic, without a stone or a joint having been disturbed; this, too, when the tower was at the height of 60 feet, its most weak state. Having stood without damage in this naked and exposed condition, nothing can prevail against it when finished. The diameter of the tower at its base is 30 feet, and at the floor of the lantern about 25 feet; the whole height from base to top of lantern is 107 feet. Workmen are now busy finishing the interior of the light-house.

Texas and Her Improvements.

The railroad enterprise of the State of Texas is almost without a parallel in this country. Considering that such works are usually the result of accumulated capital and a dense population, the movement in this direction that is visible in all quarters of this frontier commonwealth is truly remarkable, and becomes the strongest possible evidence of prosperity.

Few are prepared to expect from a people so lately organized under a State Government, and scattered over so large an extent of country, projects of internal improvement to connect points many hundreds of miles apart, and to interlace the whole of the Commonwealth with the iron pathways for steam. But these projects exist, not simply in visionary minds, or on paper, but are actually, at the present moment, in progress, the work being placed under contract, in scattered sections, from the Sabine to the Rio Grande, and from the Red River to the Gulf.

Not a port of any dimensions on the coast can be named, from which a railroad penetrating the interior is not commenced, or about to be placed under contract. The iron rails are pushed forward eastward from Houston towards New Orleans with greater rapidity than that which the older State of Louisiana has exhibited on its line of road towards the Sabine. From the point in Texas, roads radiate in every direction. Austin has two roads from the west. Indianola is pushing out an iron arm to grasp the country trade, and Lavaca is not wanting in the same enterprise, while the little villages that dot the prairies, and the country capitals of districts but lately populated, vie with the older coast settlements in filling in the links that will ultimately spread a connected network of interlaced roads over the entire State.

The liberal legislation of the State has developed and aided these enterprises, which, when regarded as a whole, are in magnitude beyond those conceived by any other Commonwealth; but State aid alone would never have produced as general and so successful a movement. Texas may be considered, in some places, as subject to drouths—as in part covered with arid plains—as exposed in some sections to terrible northers—as destitute of wood and water—but here are evidences of general prosperity that cannot be disputed. Her people are becoming opulent, or the capacity to do so much and the steady pursuit of the advantages of close connection with markets would not be manifested.

A Texas paper is scarcely opened that does not contain cheering notice of railroad progress. The number of distinct companies working on apparently isolated routes, but each really part of one harmonious system, almost bewilders the reader who is not personally acquainted with the localities of the State; and astonishment at the energy, the enterprise and the perseverance of the people, is excited, as the importance of the great scheme of improvement is fully comprehended.

The returns of the census, portions of which begin to be published, furnish facts that are in coincidence with this remarkable development of internal improvement. Texas is full of rich men. Capital begins to be accumulated in all her counties, and when the total of her material wealth is summed up, the country will scarcely find a higher rate of progress, or more substantial evidences of prosperity than are here recorded.—*N. O. Picayune.*

Coal and Iron in Belgium.

The report of the Chamber of Commerce at Liege, in remarking on the coal trade of the district, states that there are 82 pits in full operation, 24 inactive, and 11 exhausted; that the number of people employed during the year was: In the works below grounds, 11,743 men and 705 women; above ground, 2,583 men and 1,226 women; total, 14,326 men and 1,931 women. The quantity produced in 1859 was 1,875,036 tons; ditto in 1858, 1,799,062 tons; so that there has been an increase of 76,974 tons, which is not indicative of there having, during the past year, been any active demand, though the prospects for what remains of the present are said to be exceedingly encouraging.

The condition of the Liege iron trade has, during the past year, not been very different from that in coal, for it appears that there were in that district 15 furnaces in blast, which produced 103,720 tons of pig iron, of the estimated value of 8,378,000f., and as the produce during the preceding year had been 123,006 tons, valued at 11,429,400f., there has been a falling off of 19,286 tons, worth 3,051,400f., which, as the case has been nearly the same in the wrought iron departments, has made those engaged in the trade all the more anxious for the conclusion of the French commercial treaty, from which they anticipate the most astonishing advantages.

Potsdam and Watertown Railroad.

This road was sold on the 25th ult., by the Sheriff of Jefferson County at Watertown on a decree of foreclosure of the second mortgage thereon. It was purchased by the Watertown and Rome Railroad Company (under authority of an act of the present Legislature) for the sum of $100,000, and immediate possession was taken. The sum bid, however, was of no particular consequence, as the purchasers had already become the owners of the second mortgage bonds, and thus entitled to the dividend of the purchase money. The road was sold subject to the first mortgage of $800,000, which is guarantied by the Watertown and Rome Company.

The latter company is now the owner of a line of one hundred and seventy-three miles of road, extending from Rome to Cape Vincent, and from Watertown to the junction of the Northern road, near Potsdam. By the construction of seventeen miles of road, which by an act of the present Legislature it is authorized to build, it can make a direct connection with Ogdensburg. This would bring by way of this road and the New York Central nearly all the travel from Ogdensburg and from the line of road leading from Prescott, opposite Ogdensburg, to Ottawa, the capital of the Canadas—thus constituting an important line. We hear it stated that the interests to be benefitted by the construction of this short link are likely to co-operate to build it at an early day.—*Albany Argus.*

Shreveport Railroad.

The Natchitoches, La., *Chronicle* says that the road through the parish of Rapides to Cotile, about ten miles from the lower line of Natchitoches parish, has been placed under contract, and the work will be at once begun, and vigorously prosecuted to completion to the point above stated.

RAILROAD IRON.

400 TONS superior quality of 54 lbs. per yard, and 500 tons of 50 lbs. per yard, to arrive, and for sale by

MEAD & BELL,
13 Cliff St., New York.

A SCIENTIFIC AND PRACTICAL WORK.

HISTORY THEORY and PRACTICE
OF THE
ELECTRIC TELEGRAPH.

By **GEORGE B. PRESCOTT**, of Boston,
SUPERINTENDENT OF ELECTRIC TELEGRAPH LINES.

One Large Volume.....Price $1.75.
WITH ONE HUNDRED ILLUSTRATIONS.

THIS is a comprehensive scientific and practical treatise upon the Electric Telegraph, giving thorough information upon all points connected with it. The author has a thorough theoretical knowledge of the subject, and adds to that the experience of thirteen years as a practical Operator and Superintendent of Telegraphic lines. The work is profusely and elegantly illustrated.

Some of the features of the volume are as follows: A rapid, but thorough summary of the leading facts of electrical science, a careful reading of which will prepare every person to understand the principles upon which the Electric Telegraph rests; a description of all the instruments used in telegraphing in every part of the world, with an engraving of each instrument; a full history of the construction and operation of the Atlantic Telegraph, with a full report of all the messages which passed over the Atlantic Cable; a view of the various uses to which the Telegraph is applied, including an interesting and curious description of the Electric Fire Alarm System, in operation in various cities; a chapter of entertaining miscellaneous matter connected with the Telegraph.

The application of the Electric Telegraph to Railways forms a subject of discussion; and the work contains full and important information respecting the construction, maintenance, and cost of working lines.

☞ This work is for sale by all Booksellers, or will be sent, postpaid, on receipt of price, by the publishers.

TICKNOR & FIELDS, Boston.

THE NEW YORK CENTRAL RAILROAD COMPANY.

TREASURER'S OFFICE,
Albany, July 18, 1860.

THE Transfer Books of this Company will be closed at the close of business, on Tuesday the 31st day of July instant, and will be re-opened on the morning of Wednesday the 22d day of August next.

GILBERT L. WILSON,
Treasurer.

3t29

WILLIAM H. BERRYMAN,
Commission Iron Merchant,
No. 38 HARRISON STREET,
And 335, 337 & 339 Washington St.,
NEW YORK.
DEALER IN BOILER PLATE AND RIVETS.
TANK, ANGLE AND BAR IRON,
SMOKE PIPE, BOILER TUBES, ETC.

MOSES BIGELOW. MOSES BIGELOW, JR.
MOSES BIGELOW & CO.,
MANUFACTURERS OF ALL KINDS OF
COPAL VARNISHES,
At 310 & 312 Mulberry st.,
Adjoining the Chestnut st. Depot,
NEWARK, N. J.,

HAVING constantly on hand a very large stock of superior VARNISHES, would respectfully give notice to buyers that they can, at all times, be supplied with the best goods in their line, on the most favorable terms, and at the shortest possible notice.

The attention of **RAILROAD COMPANIES** and **CARRIAGE MANUFACTURERS** is especially invited to their ELASTIC or FINISHING, WEARING BODY and LIGHT CARRIAGE VARNISH, which, for free working brilliancy of lustre and fine wearing qualities, are unsurpassed by any manufactured in the Union.

Cabinet, Piano, and other Manufacturers
IN WOOD, TIN AND IRON,
can be supplied with QUICK-DRYING VARNISH of superior quality, thoroughly adapted to their various uses.

DRUGGISTS and **DEALERS** in the article may rely upon goods adapted to their trade, and will be dealt with in the most liberal manner.

☞ Goods delivered and shipped in NEW YORK **FREE OF CHARGE.**

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will send a Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.

☞ Prices exceedingly moderate. ☜

All orders and communications will receive prompt attention. Send for a circular.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.

In recommending it to their patrons, TIFFANY & CO., after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

Near City Hospital.

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine**, and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings.
For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength.
For sale in tight barrels, well papered, on application at their office, by **DELAFIELD & BAXTER, 104 Wall st.**
The above CEMENT is used in most of the fortifications building by government.

HUDSON RIVER
CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,
JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE. Secretary, 90 Wall st., N. Y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

ROSENDALE HYDRAULIC CEMENT.

New York, Saturday, August 11, 1860.

The Hoboken Railroad and the Passaic Bridge Companies.

The Hoboken Land and Improvement Company and the proprietors of the bridges over the Hackensack and Passaic rivers, have been recently contending in the courts of New Jersey as to the rights of the former to erect a bridge over either of these rivers, in derogation of the exclusive monopoly claimed by the latter.

The Hoboken Railroad Company was chartered at the last session of the New Jersey Legislature. The Passaic and Hackensack Bridge Company filed a bill in chancery, for an injunction to prevent the erection of a bridge by the Hoboken Improvement Company. The Bridge Company set up the monopoly under which the turnpike bridges were constructed, and by which it is enacted that no person should erect any other bridge within certain prescribed limits. The Bridge Company were not incorporated by the act of 1790, but were a subsequent organization, and took a lease of the bridge for ninety-nine years from Commissioners named in the act. By this lease, which was made in 1793, the Bridge Company were to build the bridges and keep them in repair for the tolls. They allege in their bill that they are entitled to all the privileges of the act. The Hoboken Company, in answer, allege that the enactment in the act of 1790 was never intended to create a monopoly, but was simply a law subject to repeal. Among the acts referred to as extinguishing the monopoly, if any ever existed, was their granting consent to the erection of the New Jersey Railroad and other bridges, which was a waver and abandonment of their monopoly; and the fact that they had no bridge suitable for the transportation of railroad cars and locomotives, and not having furnished the public with facilities for crossing the river by the new and improved vehicles of travel and transportation, they cannot complain if the public erect proper bridges for themselves. Besides, it was urged that a railroad viaduct is a very different thing, though called by the name of a bridge, from what was intended as a bridge in the act of 1790.

The case was decided by Chancellor Green, on the 30th of July, in favor of the defendants—the motion for injunction being denied and complainants' bill dismissed with costs. In view, however, of the appeal which it was understood would be taken to the Court of Errors and Appeals, the Chancellor agreed to grant a temporary injunction until the close of the next term of Court—the plaintiffs to give bond for the payment of all damages which may accrue to the defendants because of such delay in the construction of their road.

The main points in the decision were: First, that the proprietors *had* an exclusive monopoly of those rivers, so far as the building of ordinary bridges was concerned; that they, and they alone, had the right to take tolls, but that this monopoly did not extend to the construction of bridges or viaducts for the passage of engines and cars—a mode of travel unknown at the time (1790) when the privileges were granted. All public contracts, he said, were to be strictly construed. The grant to the proprietors plainly indicated the kind of privileges, namely, those of taking toll on *ordinary travel* then known and recognized; but it did not give them any exclusive franchise for *Railroad* bridges, or for taking tolls for Railroad travel. Railroad travel, therefore, was not an infringement of the plaintiff's rights, as it was only a part of an extended highway, whether of nine or nine hundred miles, it made no difference. The privilege claimed by the defendants was not designed as an invasion of the plaintiff's franchises, but was only an incidental result, of which the defendants had no right to complain. The Chancellor cited cases from the New York and North Carolina reports, fully corroborating his own views as stated.

The second point decided was, that *contracts between the State and incorporated Companies are inviolable*, in accordance with the clause of the Constitution which declares that "no law shall be passed in violation of contracts." These contracts, however, are to be strictly construed in all cases, and if any doubt exists, the doubt must be rendered in favor of the public.

New York City Railroads.

The annual report of the City Railroad Companies to the Secretary of State furnishes the following figures:

	No. pass'gers carried.		Receipts.	
Avenue.	1858.	1859.	1858.	1859.
Third	7,945 462	9,974,101	$403,055	$505,951
Eighth	6,768,203	7,589,997	338,410	379,500
Sixth	5,612,357	6,479,129	280,617	323,956
Second	4,604,645	5,182,011	227,457	262,166
Harlem	3,069,721	3,493,113	153,486	261,203

	Expenses.		Net earnings.	
Avenue.	1858.	1859.	1858.	1859.
Third	$242,811	307,188	160,244	195,763
Eighth	177,753	252,872	160,657	126,631
Sixth	178,216	216,685	103,391	107,271
Second	119,704	180,644	107,753	81,522
Harlem	82,882	130,180	70,604	131,803

The increase of passengers on the Third Avenue is the largest, being over 20 per cent.; that of the Eighth is 11 per cent.; Sixth, 16 per cent.; Second, 15 per cent.; and Harlem, 14 per cent. The average is 15½ per cent.

Evansville and Crawfordsville Railroad.

We understand that arrangements have been made for the extension of this road from Terre Haute to Rockville. The Parke County *Republican* referring to the progress of this important enterprise says: "We saw a letter from Mr. Rose, now in New York, to Gen. Steele, saying that all

the rails, spikes and chairs for the entire road to this place have been purchased, and that the whole of them will be in Terre Haute as soon as they can be freighted. The grade below the county line can be completed as fast almost as a company can lay down the iron, and on this side of the county line the grade is almost completed, excepting some repairs and the filling of a few gaps. It is confidently believed that the cars will be here by the commencement of cold weather."

Chicago, Burlington and Quincy Railroad.

The income of this company for the fiscal year ending April 30, 1860, embracing the earnings on 138 miles of road owned by the company, and the their portion, being 73 per cent. of the earnings on the 30 miles of the road leased of the Galena and Chicago Union Railroad Company, has been as follows:

For transportation of freight		$828,482 21
do. do. passengers		333,421 99
do. do. mails and miscell's.		53,408 52
Total earnings		$1,215,312 72
Balance to the credit of interest and exchange account		18,395 11
Aggregate income		$1,233,707 83
The expenditures chargeable to income account have been for—		
Operating expenses	$678,159 43	
Interest on bonds	227,739 57	
Taxes	31,176 92	
Transfer office expenses (in part for past year)	5,158 00	
Rent of Illinois Central Depot	40,000 01	
Excess of rent and operating expenses over earnings on the Peoria and Oquawka R. R.	26,072 03	
Total		1,008,305 96
Balance of income for the year		$225,401 87
Add balance of May 1, 1859		613,561 77
Add to over-credit to dividend of July, 1857		750 00
Total to May 1, 1860		$839,713 64
Deducting from the above the amount charged to improvement account, as stated in last annual rep't.	68,325.26	
And for the same account the past year	38,164.82	
		106,490 08
Leaving a balance of		$733,223 56
If from this balance the payments into the Sinking Fund for $236,000 of bonds be taken		208,279 65
There will remain a net surplus of		$524,943 91
The bills and accounts receivable, as shown by the Treasurer's report, amount to		$101,998 52
Balance of accounts due from agents and connecting roads		43,052 72
Due from the Post Office Department for mail service		7,033 33
Deposits in New York and Boston, and in the Treasury		15,463 54
Total of cash assets		$167,548 11
Value of materials on hand for the future use of the operating department	$99,110 72	
Present cost and value of steamboats for ferries at Burlington and Quincy	16,679 82	
		115,790 04
Total assets		$283,338 15

LIABILITIES.

Bills outstanding on 1st of May, 1860	$131,860 79	
Unclaimed dividends, accounts, and pay-rolls	21,067 71	
Balances due agents and connecting roads	26,131 92	
Total liabilities		$179,059 92
Excess of assets over liabilities		$104,278 23

The preceding statements show that the company was, on the 1st day of May, 1860, practically clear from what is usually considered a floating debt.

The Treasurer's report shows the several amounts charged as cost of the road, equipment, and appendages, to have been as follows:

For construction		$5,790,129 02
" equipment		1,400,998 47
" depot grounds at Chicago		201,739 05
" " " Burlington		37,399 47
" union track at Chicago		38,659 91
Total		$7,468,925 92
The advances to the Peoria and Oquawka R. R. Co., includ'g bonds purchased under agreement with that Co., have been	$515,359 41	
Bonds of the Northern Cross (now Quin'y and Chicago) R. R. Co., purch'd under agreement with that company, being the same as reported last year.	189,000 00	
Quincy & Chicago R. R. Bonds received in settlement of accounts	7,000 00	
		711,359 51
Aggregate of construction accounts, including advances to connecting roads		$8,180,285 33

The items in the accounts of cost of the road, equipment and appendages have been slightly changed, but the aggregate cost remains the same as reported last year.

It will be observed that the advances to the Peoria and Oquawka Railroad Company have been increased during the past year $31,200.92. This amount is mainly for interest accruing on their account in that time.

The capital stock of the company on the 30th day of April, 1860, exclusive of that owned by the company, was $4,629,340.

The funded debt, at same date, exclusive of bonds canceled by the Sinking Funds, was as follows:

Chicago & Aurora 1st mortgage bonds, 7 pr. ct., payable July 1, 1867	$399,000	
Chicago & Aurora 2d mortg. bonds, 7 per cent., payable Oct. 1, 1869	131,000	
Cent. Military Tract 1st mortgage bonds, 7 pr. ct. payable July 1, 1864	392,000	
Cent. Military Tract 2d mortgage bonds, 8 pr. ct. payable May 1, 1868	245,000	
Central Military Tract bonds, April 1, 1854, 8 per cent., payable April 1, 1868	7,000	
Central Military Tract bonds, March 1, 1856, 8 per cent., payable March 1, 1876	51,000	
Chicago, Burl'gton & Quincy Consolidated Bonds, 8 per cent., payable Jan. 1, 1883.	1,697,000	
		2,922,000
Aggregate stock and bonds		$7,551,340

The amount of capital stock remains the same as at the date of our last annual report. The funded debt has been reduced by the purchase and canceling of sixty-eight bonds for Sinking Fund, amounting to $68,000. The whole amount of bonds purchased and canceled for sinking fund to the present time has been $236,000.

The preceding statement show the excess of investments, for construction and advances to connecting roads, over amount of capital stock and funded debt, of $628,945.33.

The charges made to improvement account in the past year have been for twenty-three coal cars added to the rolling stock, $10,300; steam excavator and dumper cars, $7,900; ballasting roadbed with gravel, $10,817.48; additional payments on account of union tracks and lands, $5,111; new levee and protection for East Burlington depot grounds, $4,036.39—making in all, $38,164.82.

The road equipment and appendages have been maintained the past year, and are now in as good or better condition than at any former period. A larger than usual outlay has been incurred upon engines, in improving some, and fitting others for efficient coal-burners. The repairs and improvements of track and bridges have been large. About fifteen miles of track have been relaid with iron re-rolled, part new, at a cost of about $40,000, and new ties equal to about eleven miles have been purchased and laid down.

The Chicago, Burlington and Quincy Railroad in General Account, April 30, 1860.

New Orleans, Opelousas and Great Western Railroad.

ENGINEER'S OFFICE, N. O., O. & G. W. R. R. Co.
Brashear, St. Mary, July 25, 1860.

WILLIAM G. HEWES, Esq., *President:*

DEAR SIR:—My report to you on the railways of Texas, having attracted some attention, and induced inquiries as to the progress of our road, I now, agreeably to your suggestion, give, in this form, the desired information.

Our road from Algiers to Brashear, 80 miles, in operation, is now in perfect order. The present terminus of the road, at Brashear, is upon the east bank of Berwick's Bay, or the Atchafalaya river. Here, as is well known, is our sea connection with Texas, by a tri-weekly line of steamships, to which another, now being built, will be added in October or November next. As it is intended that the new steamship shall make two trips per week to Galveston, there will then be five arrivals and five departures weekly.

Continuing the line of our road, we here cross the Atchafalaya, 1,700 feet wide, by a steam ferry boat now building, that will transport the trains without breaking bulk, and with but little detention. Near the west bank, the line crosses a point of cypress swamp and marsh about three miles wide; the embankment across this is half done, and steadily progressing, under a contract with Mr. Knox, who will finish the work by the 1st of November. From thence, our line passes up the south bank of the Bayou Teche, through the rich sugar plantations of St. Mary and St. Martin, to New Iberia, 45 miles from Brashear. The whole line, from Knox's work to New Iberia, is under contract with Mr. Bisbee, and is being rapidly pushed forward at three different points. The cross-ties are all contracted for, and a portion of the rails, so that it may be set down as sure that this, our second division of the road, will be entirely completed and in running order by the 1st of July next. New Iberia is 125 miles from New Orleans.

At this place (New Iberia) the whole of the Texas railways, feeders to the Texas and New Orleans Railway, will by that road unite with ours, bringing to New Orleans, as stated in my former communication, the immense business of a country tributary to about 750 miles of finished railway, immediately after this connection is made, which will be done by the close of next year, and as the railways of Texas are being rapidly extended in several directions from the city of Houston, the extent of connecting roads will be annually increased.

There will then, very shortly, be a continuous railway from New Orleans to the city of Houston, in Texas, 347 miles; to the city of Austin, 500 miles; and to San Antonio, 550 miles; and this alone, in view of the immense business in passengers, cotton, cattle and other freight, that must necessarily be added to it by the connecting link, the Texas and New Orleans road, will make the New Orleans, Opelousas and Great Western Railway one of the most important and best paying roads in the United States.

But this is not all; at this point (New Iberia) we are only half way, with our main trunk road to our western terminus on the Sabine river. Here commences our third division, which extends to Opelousas, 40 miles, through a rich, fertile and beautiful prairie country, capable of producing sugar, cotton and corn in abundance; where lands are now in great demand, at prices ranging from ten to thirty, and even forty dollars per acre. Nearly one-half of the graduation of this division is already completed, and if the work is steadily continued we should reach Opelousas with our cars by the close of next year.

By the construction of this division, our company will acquire full ownership and possession of a very large body of the most valuable lands in Louisiana, now in great demand, the sale of which will furnish means for the rapid extension of the road to the Sabine river.

Proceeding northwestwardly from Opelousas, through the same prairie country, 25 miles, we arrive at a point of the utmost importance to New Orleans, in respect to its connection with the immensely wealthy and populous valley at Red river; this point on our main trunk line is Pine Prairie, 190 miles from New Orleans.

Here, by a branch railway of only twenty miles, we come into communication with the rich sugar and cotton district of Bayou Bœuf, unite with the Alexandria and Bayou Bœuf Railway, and establish a daily connection—in eleven hours, running time—between Alexandria and New Orleans.

The immense importance of such a communication to that section of the State and to New Orleans—the business relations of both being so intimately connected—when the delays, losses and difficulties, incident to the uncertain navigation of Red river during its protracted periods of low water are taken into consideration, must be understood by all as to render any[thing] mere statement of it here unnecessary. trade both ways will be very great, all can understand, particularly when it is known that active measures are in progress for railway extension up the valley to Natchitoches, Mansfield, Shreveport and Fulton—several hundred miles.

The construction of railways from Fulton into Kansas, by way of Fort Smith, on the Arkansas river, and from Alexandria, through the northern parishes of our State, to Little Rock, is merely a matter of time; for the want of the most direct communication by railway with New Orleans, the natural importing and exporting depot of the Southwest, will cause such to be built eventually.

From Pine Prairie our main line is continued to its western terminus on the Sabine river, at Thompson's Bluff, near lat. 31°, passing through forests of very valuable Southern pine, varied occasionally by the bottoms of rivers and creeks. This portion of our line is sixty-eight miles long; the total distance from New Orleans to the Sabine river being 258 miles. At its terminus the road will receive all the produce tributary to the Sabine river above, for a distance of several hundsed miles, or to Smith, Wood and Upshur counties, in Northeastern Texas. From our terminus on the Sabine, a railway must necessarily be extended into Texas to San Augustine, Nacogdoches, Rusk and Dallas. This road must connect or intersect with every other in Northern Texas.

Dallas, by this line, will be 480 miles distant from New Orleans, or at least 115 miles less than by any other route, and as Dallas is the business and geographical centre of the great wheat region of Texas, the importance of the saving in distance will secure to our road the wheat trade.

It will, therefore, be seen that the New Orleans, Opelousas and Great Western Railway has connection with the entire sea coast of Texas, and all her ports, by the line of steamers from Atchafalaya; that it will have connection with all the railways in the southern half of Texas, by means of the Texas and New Orleans Railway, to unite with our main trunk at New Iberia; that all of the northern half of Texas will be secured, by the extension of the line from the Sabine terminus to Dallas, and by the Sabine river navigation, and that the Red river branch will connect New Orleans with all Northwestern Louisiana.

This is an outline of the plan of construction, present condition and prospects of our road, without reference to its existing or future way business, and this, I presume, is all the information desired. With much respect, your obedient servant,

G. W. R. BAYLEY.

Journal of Railroad Law.

THE EMPLOYEES OF CONTRACTORS OF RAILROAD CORPORATIONS, NOT THE SERVANTS OF THE COMPANY; AND MAY MAINTAIN SUITS AGAINST THEM FOR INJURIES RECEIVED.

It is a familiar principle in law, and one which we have before endeavored to illustrate to the readers of the JOURNAL, that the servant of a corporation cannot sue the company for injuries received by him while in its employment, even though it should affirmatively appear upon the trial that the injuries were received entirely by reason of the negligence of the company, and through no fault of the servant. The reason of this rule is found in the fact that what is termed the negligence of the company is but the negligence of the company's servants. The corporation is dependent upon its inferior agents and emplyees for the proper management of the road; and this rule tends to make them careful in the daily routine of their duties while a contrary rule would tend to encourage negligence, and thus oftentimes make the company liable for the negligence of the servant plaintiff, especially, when the difficulties of proof, attendant upon the question of negligence, were embarrassing. Upon these reasons the law [illegible] rule that he who engages in the employ- [illegible] an other, for the performance of specified [illegible]es and services for compensation, takes upon himself the natural and ordinary risks and perils incident to the performance of such services.

But it is often a difficult question to determine, who really are the servants of a company and who are not. This arises from the different relations which parties engaged in the service of a railroad company, may hold to the corporation. It is manifest that the relation of a contractor, and of a brakeman, to a railroad company is not identical, or by any means similar. Is then the servant of the contractor to be considered as the servant of the company. If the contractor bears a different relationship to the company from the brakeman much more different is the relationship between the contractor's servant and the company. Not only is the relationship different, but in the case of Young *vs.* New York Central Railroad Company, we have a decision by the General Term of the New York Supreme Court, to the effect, that there is no relationship at all between them, and where a contractor, engaged in repairing a bridge upon a railroad for the company, employs men to work thereon by the day, the latter are the servants of the contractor, and not of the company; and between them and the company there is no privity whatever.

The plaintiff in this case claimed to recover, for an injury sustained by him, while at work upon an old bridge which was undergoing repairs, on the road of the defendants. By the evidence it appeared that he was employed by one Fowler; and that Fowler was employed by the defendants; It also appeared that there were two tracks upon this bridge; that the repairs consisted of putting up some new trusses; that the tracks were straight for some miles; that on the occasion of the alleged injury, the plaintiff was upon the top of the bridge for the purpose of carrying some materials from the east part of the bridge towards the west; that there was a passenger train approaching from the west, and a gravel train approaching from the east; that as the passenger train was passing off from the bridge, the gravel train was passing on; that the plaintiff was looking down, and stooping over, trying to keep his hat on, and did not hear the bell or whistle of either train; he saw the train coming from the west, but did not see the other, and was hit by the gravel train.

The plaintiff was nonsuited on the ground that his claim fell within the rule of those cases, holding that the liability to injury was incident to his employment; and that the plaintiff in accepting such service, must be regarded as having known the use to which the defendants' road was subject; and that he was, therefore to incur such hazard as might be occasioned by such use; and must be taken to have contracted with reference to the running of the cars over the bridge during the time of making the repairs. Upon the appeal however, to the General Term of the Court, a new trial was ordered. We give a part of the opinion of the General Term granting a new trial.

JOHNSON, J.—Whether the case was properly disposed of depends entirely as I conceive, upon the question whether the plaintiff at the time of the injury, was in fact the servant or employee of the defendants.

The general rule is, that if a servant while in the employment of his master, by his negligence, does any damage to another, such master shall be answerable for his neglect, because it is the duty of the master to employ servants who are skillful and careful. * * * * But this maxim has been held not to apply to the case of an injury to a servant or employee, occasioned by the negligence of another servant or employee of the same master. * * * * * * * * * *

From the evidence it appears that the plaintiff, at the time he received the injury, was at work for Fowler, by the day, in repairing the bridge, and that Fowler was a contractor with the defendants. This is all that appears. If Fowler was a contractor with the defendants to do this job, he was not in any legal sense their servant or employee, and the men employed by him to do the work certainly stood in no such relation to the defendants. They were his servants exclusively, and between them and the defendants there was no privity whatever. And I think it cannot be doubted, that had one of the persons employed by the defendants to run their trains been injured by the negligence of one of the persons employed by Fowler, he would have been answerable for the negligence. It could scarcely be pretended in such a case that the negligent, and the injured, employees were, both, servants of the same employers. And the rule must be reciprocal. There is a wide and obvious distinction between a contractor or jobber, and a mere servant or employer, of the servant who lets the contract. The latter could never be held responsible for the negligent acts of the former as for those of his servants, for the simple reason that none of them stand in the relation of servant to him. In the case of Farwell *vs.* the Worcester Railroad Corporation, the learned justice who delivered the opinion, put the case of a railroad owned by one set of proprietors, whose duty it was to keep it in repair, and have it at all times ready and in a fit condition for the running of cars, taking a toll; and the cars and engines owned by another set of proprietors, paying toll to the proprietors of the road, and receiving compensation from passengers for their carriage; and the engineer of the proprietors of the cars receiving an injury from the negligence of the switchtender of the proprietors of the road. In such a case the opinion is expressed that the proprietors of the road would be liable to the engineer. And this is put upon the ground, that as between the engineer employed by the proprietors of the engines and cars, and the switchtender employed by the corporation, the engineer would be a stranger, between whom and the corporation there could be no privity of contract.

That principle would obviously control this case, the plaintiff being the servant of Fowler, stood in no relation of privity to the defendants. As to them he was a mere stranger, for whose conduct they were in no respect responsible, and to whom they owed the same duty which they owed to any other stranger. It follows from this that the plaintiff was improperly nonsuited, if the evidence tended to show that the injury was caused by the negligence of the defendants' servants in charge of the train which came in contact with the plaintiff at the time such injury was inflicted. The plaintiff was lawfully there engaged in the work he was employed to perform. The defendants must be presumed to have known that the plaintiff and others were there employed, as the structure was part of their road, and they owed the plaintiff and others similarly situated, a duty to observe due care and caution in running their trains so as not needlessly to place them in peril.

The evidence tends to show that the regular passenger train, and a gravel train, which had not before passed that place, while the plaintiff had been employed there, met upon the bridge, and while the passenger train gave the usual signal of its approach, ringing the bell and blowing the whistle, the gravel train came on without giving any such warning, and struck the plaintiff while he was observing and in the act of avoiding the passenger train.

Whether the running of this unusual train in this manner, at this place, was, under all the circumstances, negligent or otherwise, was clearly, as it seems to me, a question of fact for the jury; as was also the question, whether the plaintiff situated as he was, was free from fault, or whether his own want of care did not contribute to the injury. A new trial was therefore granted.

Coal Trade of Pennsylvania.

The following abstract of Company's reports shows the coal tonnage for the season, as compared with last season to the same dates:

Locomotive Performances on the Chicago, Burlington and Quincy Railroad Line for the year ending April 30, 1860.

Miles run by passenger trains	238,603
do. freight do.	433,112
do. other do.	194,044
Total miles run	865,759
Cords of wood consumed	11,235
Tons of coal do.	15,404
Pints of oil do.	40,961
Pounds of waste do.	31,938
do. tallow do.	12,826
Labor for repairs	$43,654
Materials do.	37,650
Cost per mile for oil, waste and tallow	.83
do. do. fuel	9.96
do. do. repairs	9.39
Total cost per mile run in cents	20.18
Miles run to a pint of oil	16.09
do. do. cord of wood	42.44
do. do. ton of coal	29.45
Number of miles run by wood burners	412,380
do. do. coal burners	453,370
Cords of wood consumed by wood burners	9,717¼
do. do. coal burn's (to fire up)	1,517¼
Tons of coal consumed by coal burners	15,393¼
do. do. wood burners	11¼
Average cost per mile for engineers, firemen and wipers	6.004
General average cost per mile for fuel for wood burners	10.01
Av. cost p. m. for fuel for wood burn. pass. tr's.	8.23
do. do. do. do. fr'ght do.	18.23
do. do. do. coal burn. pass. do.	
do. do. do. do. fr'ght do.	9.98

Wood is rated at $4.25 per cord loaded on the tenders. Coal is rated at $2.50 per ton loaded on the tenders.

Oil used in headlights and lanterns of engines is included in the above expense.

One pound of tallow is rated one pint of oil in the column "Miles run to the pint of oil."

Rebuilding, superintending, shop service, teaming, and all expenditures appertaining to repairs, are included in the cost of repairs above.

On closing the accounts for the year, the actual cost of fuel loaded on tender, was found to be, for wood, $4.44, and for coal, $2.22, from which prices the following results are obtained:

	Cents.
General average cost per mile for fuel	9.71
Do., for wood burners	10.46
Do. do. passenger trains	8.60
Do. do. freight trains	19.05
Do. for coal burners freight trains	9.09

Florida Railroad.

On a recent visit to Cedar Keys, we were very much gratified to witness the vigor with which the company were prosecuting the work of completion. The public mind becomes impatient at the tardiness of the progress of works of this nature, forgetful that the *construction* is necessarily tedious. We may *travel* with railroad speed, yet we cannot *build* at the same rate. Though this road has difficulties to surmount which required almost superhuman efforts, yet it has effectually triumphed; though *crippled*, it was not *crushed*, and though other roads with not half the difficulties, succumbed to them, at no time in its darkest hour, has there been an entire suspension of work on the Florida Railroad. A large force has been constantly at work, if not in track-laying, they were in grading. But when will this road be completed? We answer very soon. The laying of the track on the few hundred yards that remain, does not necessarily imply a completion of the road. Side tracks have to be made, a turning table constructed, and the wharf completed. These, and other matters necessary for the convenience of the traveling public will require time, and it may be as late as the first of October, before the road is received from the contractor, and opened to the public. At any rate, we have no doubt but by that time, the cars will be running daily between the Atlantic and the Gulf. There is not as much trestle work at the Cedar Key end of the road as we had reason to believe, and what there is, is very substantial. The wharf that the company are now constructing at Cedar Keys will be an excellent one. The timber has been selected with the greatest care, and the piling well done. The front will be three hundred feet in length, with a depth of water at *the very lowest tide*, of ten feet. Two large warehouses will also be built. We understand that the steamers for the Cedar Key end of the road have already been purchased, so that in a few weeks hence, we may look for a daily communication with New Orleans.—*Florida Dispatch.*

Illinois Central Railroad.

The earnings of this road for the first seven months of the past five years has been as follows:

1856	$1,171,594 60
1857	1,256,907 78
1858	1,059,952 51
1859	996,332 57
1860	1,373,687 35

Locomotive Performance on the Baltimore and Ohio Railroad, for June, 1860.

Opelika and Oxford Railroad.

The Chambers *Tribune* says: The Engineers have commenced the survey of this road, and will continue until they reach Oxford; so our friends above need have no fears that the road will stop at Lafayette. It is the intention of the company to push the road through as soon as their means will allow.

North Carolina Railroad.

From the report of the President and Directors of the North Carolina Railroad, it appears that the total receipts of the road for the previous year reached $357,104 87, being an increase over the receipts of the previous year, of $48,089 62. The expenses for the same time fcot up $192,937 52; net profits $334,167 32.

Virginia State Loan.

In order to comply strictly with the letter of the law, the Board of Public Works of Virginia, have offered $6,000,000 of the stock of that State for public bids, without, however, expecting to receive proposals which can be awarded under the laws.

The advertising of such an important loan has caused inquiries as to the laws of Virginia; and, in order to answer some of the most pertinent of the inquiries, we addressed the Secretary. Our letter and the Secretary's answer are as follows:

BANK'G OFF. OF THOMPSON BROS., No. 2 Wall-st. }
NEW YORK, July 13, 1860. }

THOS. H. DEWITT, Esq., Sec. B. P. W. of Va.:

DEAR SIR:—Referring to your advertisement of May 7, inviting proposals for a loan, we beg to inquire

1. Can you legally award the loan, or any part of it, on bids that are under par for a six per cent. stock?

2. Do your laws permit the issue of coupon bonds, with the interest and principal made payable in New York or London?

3. Can you legally award five per cent. stock or bonds on bids under par; and if so, how much under par will be legal for a thirty-four year stock?

4. Are we to understand that you propose to give a Sterling bond with Sterling coupons attached, binding the Commonwealth to meet them in London? And if so, please state the amount in dollars [illegible] can legally be accepted for every £1,000 [illegible] cent. Sterling bond.

5. In case the loan, or a portion of it, shall be awarded on a proposal for a six per cent. stock, and the party afterward desires five per cent. Sterling bonds in lieu thereof, how much Sterling will be entitled to for say £1,000 of stock?

Very respectfully yours,
THOMPSON BROS.

OFFICE OF BOARD OF PUB. WORKS OF VIRGINIA, }
RICHMOND, July 26, 1860. }

TO THOMPSON BROTHERS, New York.

GENTLEMEN:—Your letter of the 13th inst. was duly received, and, after consideration, I determined to avail myself of the advice of the Board, who met a few days after, and since adjourned. This explains my delay in giving attention to your letter.

1. The Board cannot award the loan on bids under par for a 6 per cent. stock.

2. Our laws permit the issue of stock or bonds, with the interest and principal payable in New York, London, or elsewhere in Europe.

3. Five per cent. can be awarded under par—say 86 for a 34 years' stock. The lowest price that can be received for 5 per cents. is that sum which, for 34 years, is equivalent in effect to 6 per cent. in $100.

4. If Sterlings or other bonds are issued, the principal, with the coupons attached, are made payable in that currency. The amount for every £1,000 can be easily calculated from No. 3; but the State gets, in addition, the benefit of exchange, which she has to return when it is redeemed.

There is no authority to make transfers from one class of stocks to another, except that coupon bonds can be changed into registered debt, the rate of interest being the same.

I am, very respectfully,
THOMAS H. DEWITT, Sec. B. P. W.

The advertisement states that proposals will be received at any time previous to the first day of September next. Of course nobody wants a Virginia stock at par, while he can buy the same stock at 90½ *a* 91 in Wall street. While the advertising of this loan does the State no possible good, it has depreciated Virginia stocks and bonds 3 to 5 per cent.—*Thompson's Reporter.*

European and North American Railroad.

This day the European and North American Railroad is finished—or rather to be opened to the public—and the waters of the Bay of Fundy and the Gulf of St. Lawrence are to be connected by iron bands. In September, 1853, the first sod was turned. The procession and ceremonies on that occasion were unsurpassed by those of any other event ever witnessed in this Province. The lady of the present Governor General of Canada turned the first sod. Strangers from all parts crowded the streets and private as well as public houses. The ball at the Station Grounds, and the dinner at the Custom House, were numerously attended. Indeed, to use an emphatic expression, "it was a great day" for St. John. This day (August 1st, 1860,) brings about the *consummation of all*—the completion of the great work, so auspiciously begun.—*St. John, N. B., News.*

New York and Harlem Railroad Company.

The New York and Harlem Railroad Company will soon extend their road for city travel up Madison avenue to a point opposite the Central Park. For a number of years past, the Directors of this Company have paid little attention to the city business whatever, but appear to have bestowed all their efforts to operating the suburban and through line, at a cost of 70 or 85 per cent. of the earnings. From 1854 the expenses of the Harlem were $787,540, interest $194,320, making $981,860, against earnings of $935,060. Notwithstanding the Company paid that year, in dividends, $192,841. Last year the Third Avenue Railroad earned 11.62 per cent. on a cost of $1,378,000, equal to 40 per cent. upon the present cost of any similar length of road, with ample equipment. The general business of the Harlem in 1855, 1856 and 1857, shows the same unprofitable results, growing out of a ruinous rivalry with the Hudson River Road for through business. We are glad, however, to learn that a change of policy is contemplated. There is no reason why this road, possessing, as it does, the advantage of leading from a populous city, should not be as lucrative to its shareholders as the Philadelphia, Germantown and Norristown, and several that diverge from Boston. The Harlem road really enjoys advantages equal to any line in the country, if properly cultivated. If the Third Avenue line is enabled to earn $450,000 annually upon six miles of road, why cannot the Harlem do the same? This would give a return of 100 per cent., estimating the track from Thirtieth to Ninety-first street to cost $100,000—a liberal sum in view of the improved method of laying down city roads—and the line already built from the south end of the Park to Thirtieth street, to represent $150,000. And yet it only requires the city business of the Harlem to be but a little more than doubled to accomplish this.

In 1858, the number of passengers carried over the Third Avenue line was 7,945,462, at an average of 5.07 cents each. The Harlem company carried during the same period but 3,069,721, which, at an average of five cents each—the same as were received by the Sixth and Eighth Avenue lines—yielded $153,486. The average expenses of operating all the city lines is 54 per cent. of the gross receipt; this gives expenses $82,882, and net earnings $70,604, or 10 per cent. upon $706,000. Now, as this portion of the road could be rebuilt for $30,000 per mile, or $75,000 for the distance from the Astor House to Thirtieth street, it will be seen, the profit on the cost was within a fraction of 100 per cent., while the average net earnings, not counting interest on the debt, for the business upon the whole line has only averaged, since 1854, about 3½ per cent. upon its whole cost. Since 1857, a new system of accounts has been inaugurated, the floating debt liquidated, many wholesome reforms introduced, the road put in complete order, and operated with a reduction in the working expenses of the road from 81 to 60 per cent.; but none so important to the stockholders' interests as that of increasing, by every means possible, its revenues from city business. The directors, if from no other motive than the results of last year's business upon the four up-town roads, owe it to the shareholders to obtain a portion of the revenues from this branch of traffic. These four roads, representing a cost of $3,945,835, actually realized in net earnings $1,000,000, or $43,478 per mile, while those on the Harlem, from New York to Chatham, for the past six years, have averaged but $2,166 annually. This done, and a sale of the real estate not wanted by the Company, let us see what would be its condition, another year—September 30, 1861.

Earnings from traffic, moved by steam.	$1,200,000
Do. do. horses,	400,060
Total earnings	$1,600,000
Expenses, 50 per cent.	800,000
Net earnings	$800,000
From which deduct interest on 1st and 3d mortgage bonds and unsecured $4,500,000	315,000
Leaving for stockholders	$485,000

The business of the present fiscal year, now near its close, will show gross earnings of $1,150,000, at an expense of $700,000 for operating and repairs. The estimate for 1861—in view of the recent arrangements for through business, and that to be derived by an extension of three miles of its city track—is not an extravagant one, and is more likely to be exceeded than to fall short.

The funded debt and floating debt combined; the total cost, and the annual receipts of the New York and Harlem Railroad Company for the past five years have been as follows, (fractional parts of thousands omitted):

	Funded and Floating Debt.	Total Cost.	Annual Receipts.
1855	$4,069,000	$6,458,000	$1,184,000
1856	4,293,000	10,128,000	1,040,000
1857	4,901,000	6.112,000	1,027,000
1858	5,298,000	7,948,000	975,000
1859	5,353,000	8,019,000	1,076,000

In 1846, the Harlem shares were selling at 44*a* 57. In 1851, at 62*a*75½. In 1857, they dropped down to a minimum of 6*a*14. In the year 1859, they ranged from 9¼*a*13½, but have now reached 16*a*17 for Common Shares, and 44½*a*45 for Preferred. The road is 130 miles long to Chatham Four Corners, besides 29 miles of double track.—*N. Y. Courier and Enquirer.*

Norwich and Worcester Railroad.

The New York correspondent of the *Norwich Aurora*, speaking of the new line of boats building for the Norwich and Worcester route, says:

The citizens of Norwich should congratulate themselves upon the successful accomplishment of a scheme which will not only give them a commodious and easy transit to New York, but also place the Norwich and Worcester Railroad on a more permanent and paying basis. The keels of two of the finest boats that ever floated have been recently laid, and in due course of time will be placed on the route. They will be of nearly the length of the Commonwealth, with equal strength and speed, but without her great draught of water, enabling them at all times to run to Norwich. There will be every comfort carefully provided for in the construction of the new boats, without any attempt at tinsel or nonsense. We understand that the steamers will be warmed by steam, fitted up with wide, spacious berths, and water introduced in the same manner as in our best private dwellings. The partitions will be double and lined with felting, thus keeping them cool in Summer and warm in Winter, and greatly decreasing the hazards of fire. Large, spacious wash-rooms, smooking-rooms, &c., will be fitted up in such style as to make it a pleasure to travel. The *cuisine* is also to be arranged on the European plan, each article to be cooked to order, and on the trip to Boston a free lunch will be served at 12 o'clock.

General Railroad Intelligence.

The Pottsville *Miner's Journal* of 4th inst., says: "The Philadelphia and Reading Railroad Company have commenced constructing the Branch Road from Tuckerton, six miles above Reading, leading to the East Pennsylvania Road, about six from Reading. This branch will be two miles in extent, and will cut off twelve miles of the present distance from this region to New York, and will also avoid the heaviest grade on the East Pennsylvania Road, a short distance from Reading. It will be completed, we learn, in the course of the present year. This improvement is designed to send coal directly to New York in the Winter season, from this region.

Both the passenger and miscellaneous business of the East Pennsylvania Road is increasing monthly. It is one of the best constructed roads in the country, and if coal can be transported over it to any extent to advantage, will soon become a good paying road. By this route passengers can leave Pottsville at 2 o'clock P. M., and arrive in New York at 9¼ P. M.; returning, leave New York at 12 M., and arrive in Pottsvilee at 8 P. M.

The opening of the Dorchester and Roxbury Railroad, extending from the old terminus of Metropolitan Railroad to Dorchester, a distance of 1⅓ miles, took place on the 3d inst. It is leased to the Metropolitan Railroad Company for a period of five years.

We learn from the Charleston *Courier* that a contract has been entered into between the Charleston and Savannah Railroad Company, and Messrs. McDowell & Callahan, railroad contractors of Savannah, by which the latter are to construct across the Savannah River, an accommodation bridge, to be finished by the first of October. The contractors have engaged Messrs. Cameron & Co., of Charleston, to prepare for them the iron work necessary, such as the turn table or draw bridge, &c., amounting in the aggregate to about twenty-four tons of iron. The whole of the work is, under the specifications, to be submitted to the inspection of Mr. Muller, Assistant Engineer, and to be approved by the Chief Engineer, Major Manigault.

We learn that 17 miles of the Savannah, Griffin and North Alabama Railroad, beyond Newman, have been let to contract.

The opening of the Atlantic and Gulf Railroad to Valdosta, 155 miles from Savannah, was celebrated on the 27th ult.

The Bondholders of the Chicago and Northwestern Company are about to meet to act upon the original intention of extending the road about twenty-four miles to Appleton through Neenah. It. is understood that the right of way will be furnished by the people along the proposed line, and bonds will probably be issued at the rate of $8,000 per mile for ironing the road. By making this extension the company will secure the land grant for which scrip has already been issued, as well as seventy-two thousand acres additional.

The Council of Evansville has levied a special tax to pay the interest on the subscription of $100,000 to the Evansville and Crawfordsville Railroad, and to pay one-third of the principal—$33,333⅓—now due. The Indianapolis *Journal* says the principal, interest and exchange will amount to about $37,000. The special levy of forty cents on the $100 of taxables will yield a revenue of some $18,000. The remaining $19,000 will be provided for by an appropriation from a sinking fund and by a small loan. In a few years Evansville will have its railroad debt paid.

A bill endorsing $500,000 of the bonds of the Western Maryland Railroad has been passed, and is now a law. This road is now partly finished and some twenty miles of it working regularly. It runs from Baltimore to Hagerstown, a distance of eighty miles, penetrating the richest agricultural and mineral region of the State. With a branch, as contemplated, built from Hagerstown, fifty-five miles, to unite with the Manassas Gap Railway in Virginia, it will open up an unbroken line from Baltimore to New Orleans, shorter than any other now in existence. By connecting with the Franklin road from Hagerstown to Chambersburg, Pa., and there with the Cumberland Valley, that, too, with the Pennsylvania Central, and other roads running through Northern Pennsylvania and New York State, the Southern route must likewise be materially abbreviated to New York city and other points in the North. It will require about two million dollars to complete the Western Maryland. Most of it is now under contract and the residue, from Union Bridge to Hagerstown, forty miles, soon will be.

Another Trans-Isthmian R. R. in Embrio.

Mr. Dimitry, Secretary of the U. S. Legation to Costa Rica has returned home, and is bearer of dispatches to his Government. Among these, the most important is the full ratification by the Congress of Costa Rica of the grant of the right of way for a railroad across the Costa Rican territory to Ambrose W. Thompson and associates. The project when first submitted by President Montelegre to Congress met with great opposition, but finally, on the 4th July ult., was approved almost unanimously. The grant is for eighty years; the road-way is to be three hundred yards in width. A strip a mile wide on each side is set apart, and alternate sections a mile square on each side are donated in fee.

The other alternate sections are reserved to the government, but an equal quantity of the public lands in any portion of the Republic, at the selection of Mr. Thompson, are granted him in perpetuity. The ports at each end of the road are to be free ports throughout the term of the grant. The location of the road is to be between the Bay of Coronada and the Granada boundary line on the Pacific, and the point of Canta and said boundary line on the Atlantic. Costa Rica claims with great justice as her boundary a line drawn from the Escuada de Zeraga on the Atlantic to the point of Burisa on the Pacific. This gives the whole of the Lagoon of Chiraqui on the Atlantic, and the entire Gulf of Dolce, as well as two fine bays, in addition on the Atlantic, on which to terminate the roadway.

The road is to be first class; and the surveys are to be made within two years and built six years thereafter. The grantee is to maintain an efficient corps of police all along the line, to preserve order. He has the right to erect and maintain public hospitals at the termini. The troops and messengers of the government are to be carried over the road free of expense, but no foreign troops or munitions of war are permitted to pass over it without consent of Costa Rica. The road cannot be transferred to any foreign government. Contracts made by the grantee in foreign countries for service or labor shall have the same force in Costa Rica as in places of their agreement. Costa Rica is not to dispose of any of her lands, or give titles therefor, until Mr. Thompson has selected the quantity given in lieu of the alternate sections reserved to the government on the line of the road. A charter for the purpose of organization is given by Costa Rica, with all the powers and privileges as contained in the Chiriqui Improvement Company's charter, granted by the State of Pennsylvania, six per cent. of the net profits of the company are to be paid annually to Costa Rica; $50,000 are to be deposited within one year as a guaranty that the road will be made. This is to be returned without interest as soon as the road is completed. There is no other tax reserved upon the road or mails passing over it. In case there is any disagreement as to the meaning of the articles, the Supreme Court of Chili are to be arbitrators. This is considered to be the most liberal and valuable railroad grant which has ever yet been made across the great American Isthmus, and as placing Mr. Thompson in a high and independent position. He holds grants from New Granada which cannot legally be annulled, though efforts have been made to that end, while this of Costa Rica stands without conflict of any kind.

Hannibal and St. Joseph Railroad.

We find in the *Railroad Record*, of 2d inst., a letter signed "D.," dated St. Joseph, July 18, 1860, from which we copy the following paragraphs:

The completion of the Hannibal and St. Joseph Railway, has decided, I think, the eastern terminus of the Central Pacific Line, as well as opened up for settlement the immense and fertile territory of North Missouri, Southern Iowa, Nebraska, and Northern Kansas which before were almost inaccessible, except during a small portion of the year. This road consequently is destined to work a great revolution in all the territory named; and will furnish an immense outlet for the manufactures of Cincinnati, Pittsburg and St. Louis. Indeed its importance can hardly be estimated, for it is the last and greatest link connecting the East with the West. If you glance at the map of the *whole* United States, you will see that its western terminus is nearly in the *centre*, where the east and west meet, while its western termini at Quincy and Hannibal, grasp in their iron fingers the great arteries of trade and travel leading North, East and South.

Already this road is beginning to produce fruits at its Western terminus. St. Joseph, which a few years ago was a frontier trading post, has grown into a fine city, with 13,200 inhabitants, with all the appliances of civilization and refinement, and with a trade not surpassed by any other city of its class in the county. It has also called into existence the Platte Country Railway, which is designed to connect Council Bluffs, in Iowa, with Kansas City, along the eastern shore of the Missouri. This road is now open to the north of St. Joseph some 12 or 15 miles, and south 20 miles, to Atchison, and will, during the summer, be opened to Weston, some 15 miles further south. Operations have also begun at Council Bluffs, south, and before the close of 1861 we shall be able to go all the way by rail from Portland, Maine, via. St. Louis and Kansas City, or via. Hannibal and St. Joseph, to Council Bluffs, Iowa.

But it is west of the Missouri where we are to look for the grandest results. Already the iron horse has crossed that once formidable stream, and is now coursing out a dozen miles or so, on the plains in the direction of the gold mines, on the "St. Joseph, Marysville and Pike's Peak Railroad," which I have little doubt, will form a link of the first great chain of railway to connect the Atlantic with the Pacific.

Providence and Worcester Railroad.

This corporation have paid in cash $100,000 of the bonds of the company. The entire debt is now only $200,000, and this is in bonds maturing at different periods during the next four years. The company own 398 shares of their own stock, of the cash value of over $40,000.—*Providence Journal.*

Coal in Russia.

During the year 1858 there was an increase in the importation of coal at St. Petersburg; in 1857 there were imported 142,000 tons, and in the following year 270,000 tons, giving an increase in that city alone of 128,000 tons. There has been a considerable demand for them for the use of steamboats, manufactures, and to a certain exter , railways; they are also used in the workshops and factories. Till now it has been considered more economical and less injurious to the machinery to use wood; but as the supply cannot keep up with the demand, coal will become more general on Russian railways; but a few years will see large supplies sent from the Ural mountains. At present the pits can hardly be said to be properly worked, and from the defective means of transport they would be too expensive to be of any advantage. The Russian Government uses annually in St. Petersburg 85,000 tons, the price for steam pur-

poses being about 24s. per ton—for house purposes about 30s. per ton, delivered.

Macon and Augusta Railroad.

The Augusta *Chronicle* says that ground was broken on this road on the 21st ult.; that the work has been commenced in earnest, and is to be prosecuted with vigor. The force of 200 hands, with which the work was commenced, has since been nearly doubled. Mr. S. D. HEARD is President of the company.

Railroad Earnings.

The earnings of the Troy and Boston Railroad for May and June were as follows:

	May.	June.
1860	$26,842 20	$27,446 84
1859	21,181 98	21,956 44
Increase	$3,660 22	$5,490 42

The earnings of the Dubuque and Pacific Railroad for June, were $10,389 34, and the current expenses, $4,503 14. Net profit for the month, $5,894 31.

The following statement exhibits the earnings of the Milwaukee and Mississippi Railroad for July, in comparison with the earnings for the corresponding month of last year:

	1860.	1859.
Freight	$20,641 07	$24,294 65
Passengers	13,829 86	19,704 42
Mails	3,356 88	1,835 42
Total	$37,827 81	$45,834 49
Decrease		$8,006 68

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning) for July, 1860, compared with the same month of last year:

	1859.	1860.
Passengers	$13,529 69	$14,473 74
Freight	24,611 87	29,365 95
Other sources	1,686 86	1,686 85
Total	$39,828 42	$45,526 54

The earnings of the Cleveland and Toledo Railroad for July, 1860, were $50,639
July, 1859 45,963
Increase $4,675

The earnings of the Chicago, Burlington and Quincy Railroad line, in the month of July, were:

	1859.	1860.
Freight	$55,616 29	$113,212 00
Passengers	41,397 64	36,748 80
Mails and miscellaneous	3,869 68	4,762 61
Total	$100,883 61	$154,723 41
Increase		$53,839 80

The earnings of the Hudson River Railroad for July, 1860, were $140,865 92
July, 1859 125,304 57
Increase $15,561 35

The earnings of the Michigan Central Railroad, in July, 1860, were $128,383 28
July, 1859 108,303 94
Increase $20,079 34

The earnings of the Chicago and Rock Island Railroad for July 1860, were $80,609
July, 1859 65,831
Increase $14,778

The earnings of the Galena and Chicago Union Railroad for July were:

	1859.	1860.
Freights	$49,509 96	$46,467 07
Passengers	32,865 44	27,375 05
Mails, etc.	6,151 66	5,000 00
Total	$88,527 06	$78,842 12
Decrease		$9,684 94

Corrected earnings for the previous month, $93,448 90.

The earnings of the St. Louis, Alton and Chicago Railroad, for July, were:

Passengers	$30,455 13
Freight	49,214 90
Mails and express	3,449 76
Total	$83,119 79
Corresponding period in 1859	58,801 00
Increase in 1860	$24,318 79

The traffic of the Great Western Railway of Canada for the week ending July 27, 1860, was as follows:

Passengers	$16,973 35
Freight and live stock	10,408 20
Mails and sundries	1,301 67
Total	$28,683 22
Corresponding week last year	26,636 68
Increase	$2,046 54

The receipts of the Grand Trunk Railway of Canada for the week ending July 21, were $50,760 27
Week ending July 23, 1859 37,434 65
Increase in 1860 $13,325 62
Total traffic from July 1st, 1860 $157,907 64
Same period last year 116,544 37
Increase $41,363 27

The earnings of the Toledo and Wabash Road for July, 1860, were as follows:

From Passengers	$19,400 55
" Freight	61,320 86
" Express	1,300 00
" Mails	2,016 66
" Other sources	841 10
Total	$84,879 17
July, 1859	59,141 28
Gain in July, 1860	$25,737 89

The net receipts of the Harlem Railroad Company for July were as follows:

July, 1860	$100,039 96
" 1859	91,189 78
Net increase	$8,850 18

The receipts of the Chicago and Northwestern Railroad Comp'y for July, 1860, were $39,840 68
July, 1859 24,274 10
Increase $15,566 58

The receipts of the Grand Trunk Railway of Canada, for the week ending July 28th, 1860, were $54,471 99
Corresponding week, 1859 44,364 69
Increase $10,107 30
Total traffic from July 1, 1860 $212,379 63
Do. for same period last y... 160,909 06
Increase $51,470 57

The following is a comparative statement of the earnings of the Indianapolis and Cincinnaii Railroad (exclusive of mail and express) for the months of July, 1859 and 1860:

	1859.	1860.
Passengers	$11,167	$12,819
Freight	14,046	16,786
Total	$25,213	$29,605
Increase in 1860		$4,392

Marietta and Cincinnati Railroad.

An election for Directors was held by the Trustees (Noah L. Wilson, President), and 149,133 shares were voted. The entire interest of $7,800,000 was represented, with the exception of about $200,000. Most of the shares were represented by proxies. The following gentlemen were chosen Directors:

E. W. Fernie, T. W. Powell, Wm. Ferguson, London; Noah L. Wilson, John Madeira, Chillicothe; David Gibson, Wm. F. Roelofson, Wm. P. Hurlburt, S. B. Keyes, Wm. Glenn, Cincinnati; Douglas Putnam, Wm. B. Cutter, Marietta; F. J. Hezeltine, Zeleskie.

Among the large number of shareholders who were represented by proxy, we observe the names of Prince Ladislaus Czartoryski, Prince Adam Sapeha, Prince Alexandre Petzezdziecki, and Count Jean Zamorysky. The aggregate of interest represented by the proxies of these German princes, in the election, was about $300,000.

Mr. John Brough, formerly President of the Madison and Indianapolis Railroad, and who afterwards occupied the same official position on the Bellefontaine and Indianapolis Railroad, under a new arrangement, has been elected President of this company. The Cincinnati *Gazette* of August 2d says respecting the action of the stockholders on the purchase of the Union and Hillsborough Railroads:

The stockholders met yesterday morning, and received and discussed a proposition for the sale and transfer of the Union Railroad, from Scott's Landing to Belpre, to the new organization, and the Directors were authorized to conclude the purchase upon the terms proposed. This the new Board of Directors have done. The stockholders also authorized the purchase of the Hillsboro' road, from Hillsboro' to Loveland, upon terms which had been agreed upon by the Boards of both the Hillsboro' and Marietta roads.

They also approved of the proposition, and authorized the Board of Directors to take the necessary measures to increase the capital from $8,000,000 to $10,000,000.

They further authorized the Directors to raise a loan of $3,300,000, by giving a mortgage, which shall be the first and only mortgage upon the entire property, for the purpose of placing the road and equipments in thorough repair, and completing the enterprise as originally completed.

As this mortgage will be the first and only one upon a property that has cost over $15,000,000, there will be no difficulty in obtaining the loan, and in fact we believe the Board know now where the money can be obtained.

American Railroad Journal.

Saturday, August 11, 1860.

Railroad Reports.

Railroad Companies will oblige us by sending us copies of their Reports as soon as they are published.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Long Island Railroad.

Arrangements for the accommodation of the traffic of this road at the Hunter's Point terminus are progressing favorably under the direction of the company, and will shortly be completed. An engine house—a fine brick structure 80 by 35 feet—with the necessary turn-tables, and other apparatus for housing and repairing the locomotives, etc., has been erected. A large depot building, about 800 feet long, intended for the use of passengers, for freight accommodations and offices, is also nearly completed. The frame is constructed of heavy timber, and the whole is covered with slate to render the roof fire-proof. Excavations in front of the wharf, on the same pier with the landing of the Thirty-fourth street ferry, have secured the required depth of water for vessels calling to land and receive freight. At the end of the pier there is a natural depth of about fifteen feet. The work on the railroad is also progressing. A large portion of the grade is completed from Jamaica to Hunter's Point. A large force of men is engaged on the road, which will be finished this month. The iron for the rails is nearly all delivered, and the ties have been distributed along

the road at different points. The laying of the track will have been commenced in about ten days, at three different places, viz., Jamaica, Hunter's Point and Winfield. It will require about thirty days' time for the completion of the work, so that the cars will probably be running by the latter part of September. Already considerable activity is apparent about the new terminus, in anticipation of the business which will spring up when the change occurs. A handsome building of brick and stone is going up on the opposite side of Newtown Creek, for the glass manufactory already in operation there. Lumber, lime and cement depots have also been established to supply building materials on the spot, and hotels and boarding houses are in progress of erection.

Railroads in Texas.

We gave last week a communication from G. W. R. Bayley, Esq., Chief Engineer of the New Orleans, Opelousas and Great Western Railroad, to Wm. G. Hewes, Esq., its President, in reference to his examination of the condition and prospects of the Texas railroads generally—but with particular reference to the Texas and New Orleans Railroad, and its tributary connections. In this week's issue, we give another letter from Mr. Bayley to Mr. Hewes, upon the same subject, but with particular reference to their own road, to which not only all the railroads of Texas, which will pour the wealth of that State into the lap of New Orleans will be tributary, but, also the Texas and New Orleans Railroad itself, through which and over which all these rich harvests must necessarily pass. These letters are thus referred to in the columns of the New Orleans *Picayune:*

Two letters from Mr. Bayley, Engineer-in-Chief of the Opelousas Railroad, furnished for publication by Mr. Hewes, President of the company, will be found in this morning's paper. They present full and very interesting information on the state of forwardness of the railroad connections which are to open New Orleans to the interior of Texas. Few of our citizens, even the most attentive to the progress of these works, are aware of the success with which the energy of Texas is put forward in railroads, and blending them into one branch of communication with the Opelousas Railroad at Iberia, and thence by that road to the city of New Orleans.

Inquiries have been made through the Texas press as to the arrangements for extending the Opelousas road from its present terminus at Berwick's Bay to New Iberia, the point of junction with the Texas road. The Engineer of the company now states that the whole line is under contract; that the work is prosecuted at three several points; that the cross ties and part of the rails are contracted for; and it may be set down as sure that the road will be entirely completed and in running order by the 1st of July next.

On the same authority, and from a recent personal inspection of the works in progress in Texas, it is stated that the whole line of roads from New Iberia to Houston, in Texas, will be also completed in 1861, giving us a direct railroad between these two places—347 miles long—viz: New Orleans to New Iberia, 125 miles; New Iberia to the Sabine, 116 miles; the Sabine to Houston, 106 miles.

At Houston this road makes its connection with the whole system of Texas roads, completed and in progress, and receiving numerous feeders, which come in from various directions, to pour the commerce of that immense State into one great channel, whose natural and necessary terminus is New Orleans.

This is the general result, of which these letters assure us of the speedy accomplishment, in the finishing of a few works already constructed, in whole or in part, and for which provision is made under capable and enterprising managers. These things are no longer prophecies, promises, or dreams. They are so nearly realities that we may congratulate ourselves that the time is short before we can enter into the enjoyment of the incalculable advantages of direct and speedy communication with the whole of Texas—a State of marvelous growth already, and which needs only this increase of such facilities to advance with an accelerated ratio in production, population, and wealth.

New York Canal Tolls.

The tolls received on all the canals of the State in the month of July, 1860, were $368,624 81
Do. in 1859.... .... 202,506 89

Increase in 1860.... ....$166,117 92

—or 82.03 per cent.

The receipts of tolls to 1st August in the years named were:

1860....	$1,154,457	1855.....	$1,107,242
1859....	686,249	1854.....	1,261,801
1858....	915,132	1853.....	1,387,992
1857....	835,983	1852.....	1,337,530
1856....	994,368	1851.....	1,520,376

Tolls were reduced in 1852, and again in 1858 and 1859. Tolls were raised in 1860, partially.

Loss of tolls in 1860 comp'd with 1851..		$365,819
Gain of tolls in 1860 comp'd with 1859..		486,206
Compared with 1858....		239,325
Do.	1857....	318.474
Do.	1856....	160,089
Do.	1855....	47,215

Michigan Southern and Northern Indiana Railroad.

The earnings of this road for July were as follows:

	1859.	1860.
Passengers....	$49,153 67	$52,260 97
Freight....	41,821 57	62,981 68
Miscellaneous	10,735 02	6,437 85
Total.....	$101,710 26	$121,580 50
Increase....		$19,870 24

The miscellaneous receipts, it will be noticed, are smaller than last year. This occurs, and will for future months, inasmuch as under the new system of keeping the accounts of the Company, these receipts are mostly credited to the different accounts of expenditures, thus reducing expenses nstead of swelling receipts.

New Jersey Central Railroad.

In addition to the finances of this company given last week, we annex the following statement for the six months ending June 30, compared with the corresponding six months of 1859:

1860.	Passenger.	Merc'dise.	Coal.	Mails &c.
Jan..	$11,965.39	$25,807.72	$35,795.48	$1,536.74

Increase..	$120,662.14	....	....

Brooklyn City Railroad Company.

The monthly earnings of this road for the past five years has been as follows: There has been, it will be seen, a steady increase of receipts, larger in the present year than in any previous one. The expenses of operating this road are 72 to 73 per cent of the gross receipts, and the dividends regularly paid are 8 per cent. The amount earned is about 12 per cent. The Company has no floating or funded debt.

EARNINGS BROOKLYN CITY RAILROAD.

	1856.	1857.	1858.	1859.	1860.
Jan....	$22,257	$24,515	$26,880	$32,530	$36,655
Feb....	13,808	23,859	21,688	28,774	32,447
March .	21,264	25,644	26,508	35,823	38,513
April ..	26,918	29,370	30,195	37,319	39,827
May...	31,032	34,375	34,328	42,376	44,687

Total .	$331,805	377,497	403.552	478,088	290,645

Norwich and Worcester Railroad.

The earnings of this road for the year ending June 1st, 1860, were $353,898 26
Expenses.... .... 211,485 37

Total $142,412 89
Interest for the year 41,239 81

Net income.... ....$101,173 08

This shows net earnings of nearly five per cent. on the par value of the stock notwithstanding large amounts have been expended during the last year in motive power and rolling stock, all of which has been charged to expense account. The road is in good condition, being equipped equal to any road in New England, and has no floating debt. The funded debt, amounting to only $545,410, is provided for by a sinking fund. The report says:

"The business of the road is increasing, as will appear from the earnings of the past year, compared with former reports of earnings. There are now building on the line of the road (with mills that were completed a few months since), an amount equal to 1,800 looms of cotton machinery. In view of this additional machinery on the line of road, with the impulse given by having a line of new boats (to through travel), we may safely expect a large increase of business."

Lexington and West Cambridge Railroad.

The annual meeting of this company was held in Boston on the 3d inst., Hon. Charles Hudson, the President, submitted the annual reports of the Directors and Treasurer.

The gross receipts of the year, to July 1st, after paying the Fitchburg Railroad for hauling cars is $17,026 54. Expenses including the above stipend to the Fitchburg road, $13,795 01; leaving a balance of $3,261 53, which will be increased some $2,000 in case the lawsuit now pending with the Fitchburg road, terminates favorably to this company. The road is free from debt exceeding $1,000, except so far as the unpaid dividends to its stockholders. The rails and stock of the company generally are in good condition, and they have on hand $1,000 worth of fuel.

The proposition of leasing the road for a term of years was referred to the Directors with full power.

The stockholders then balloted for Directors, resulting as follows:—Hon. Charles Hudson, Joseph N. Howe, Samuel Butterfield, Addison Gage, A. W. Farren, James Dana and Arthur T. Lyman.

Eastern Texas Railroad.

The Henderson and Mexican Gulf Railroad has been recently re-organized under the title of the Eastern Texas Railroad, of which Gen. H. H. Edwards, of Nacogdoches, Texas, is President. About 30 miles of its line, from Sabine Pass to Beaumont, is graded. The company is now in the market for the purchase of rails, for which it has the State loan of $6,000 per mile, and the usual quantity of land, a portion of which is already located on the line of the road. The road is to be continued northward, and a large force is to be immediately placed on it. It is designed to construct the road as far as Nacogdoches, if not to the northern boundary of the State.

Philadelphia and Baltimore Central R. R.

Another meeting of the stockholders of this road was held at Avondale, on the 21st. A large number were in attendance, and much interest was evinced as to the future prospects of the road. A committee was appointed to devise measures to extricate the company from its present embarrassments. The plan recommended by the committee was to raise $120,000 by selling the bonds at 70 per cent.; the Philadelphia and Westchester Railroad Company to take bonds for the freight carried over their road for three years, and the bondholders to take scrip for the interest, or new bonds. The plan was adopted, and a committee of twelve appointed to carry it out. The meeting then adjourned to August 4th.

The road is now in operation to Avondale, a distance of 38 miles from Philadelphia.

Troy and Greenfield Railroad.

The Greenfield (Mass.) *Gazette* says: Mr. Haupt, the contractor of the Troy and Greenfield Railroad, has made a contract with the Rensselaer Iron Works of Troy, N. Y., for the iron rails for the thirty miles of the road from Greenfield to the east end of the tunnel. The rails for the first four miles of the road, from Greenfield to the Stillwater bridge, are to be delivered at Greenfield by the first of October. A steam drill, now nearly perfected, will at an early day be introduced into the tunnel, and the work advanced at a very rapid rate. Not over five years will elapse before the iron horse will be snorting through the bowels of Hoosac Mountain.

Memphis and Charleston Railroad.

The receipts of this road for the year ending June 30, 1860, were:

From passengers	$975,259 83
" Freight	582,573 26
" Mail	55,175 00
" Express	17,488 38
" Privileges	480 00
" Rents and tolls	4,220 70
	$1,635,096 67
Total expenditures	761,500 00
Net earnings	$873,596 67

Southern Minnesota Railroad.

A correspondent of the Milwaukee *Wisconsin* writes as follows in relation to the Southern Minnesota Railroad:

"The bed, bridges and ties are all ready to receive the rails and locomotives. All that is now needed to make this road complete to Houston—twenty miles—is capital sufficient to buy iron and cars to put in running order. The officers of the road are all men of property, who have invested and lost in Minnesota real estate. They did all in their power to build up that section of the country, but when the panic came, it swept all their plans into the realm of confusion and ruin.

The depot grounds are all laid out a short distance south of La Crescent, while the main stem of the road debouches on an island directly opposite La Crosse. The cost of this work has already been heavy, as the grade is raised from eight to ten feet for several miles through a marsh, and the number of bridges built is greater than usual on railroad lines in the West."

Catawissa Railroad.

This company was re organized on the 4th inst., by the election of the following officers:

President—T. Haskins Du Puy.

Directors—Samuel V. Merrick, Charles Macalester, James S. Cox, William Schott, of Philadelphia; Joseph Paxton, of Catawissa; Robert Bayard, of New York.

Secretary and Treasurer—William R. Fisher.

The *Ledger* says: "Mr. Du Puy's vote on $840,000 1st mortgage is 1,295, votes on other interests 987, in all 2,282 votes. Mr. Hutchinson's vote on $320,000 1st mortgage is 613, votes on other interests 129, in all 742 votes. We believe there was some division of the vote for directors, and though all of the candidates on the Du Puy ticket are elected, as we are informed, they did not all receive as large a majority as did the candidate for President. This important link of railroad is now in the hands of men having all the ability necessary to its management."

Philadelphia City Passenger Railroads.

We copy from the Philadelphia *Inquirer*, the following list of the Presidents, Secretaries and Superintendents of all the street railroad companies in that city. They are arranged according to the priority of the roads going into operation:

The Fifth and Sixth.—President, James West; Treasurer, E. Hart; Secretary, Charles R. Abbott; Superintendent, Wm. Leaf.

The West Philadelphia.—President, William Wright; Treasurer, Samuel W. Cattell; Secretary, Charles Lombaert; Superintendent, Daniel Rhoads.

The Tenth and Eleventh.—President, Geo. Williams; Secretary and Treasurer, William Bonsal; Superintendent, Jacob Peters.

The Spruce and Pine.—President, William D. Lewis; Secretary and Treasurer, John Miller; Superintendent, Henry Smith.

The Race and Vine.—President, Martin Thomas; Treasurer, Harvey Quicksall; Secretary, P. B. Winning; Superintendent, Sidney Deming.

The Second and Third.—President, Robert F. Taylor; Treasurer, Robert Kelton; Secretary, Thomas Logan; Superintendent, John Gillingham.

The Philadelphia and Darby.—President, Thomas S. Ellis; Treasurer, Thomas Sparks; Secretary, George McHenry; Superintendent, George G. Leech.

The Girard College.—President, E. B. Edwards; Secretary and Treasurer, Wm. S. Blight; Superintendent, Jas. F. Nicholas.

The Green and Coates.—President, William C. Bridges; Secretary and Treasurer, Dendy Sharwood; Superintendent, G. Washington Fitzwater.

The Arch and Fairmount.—President, Martin Thomas; Treasurer, Joseph Brower; Secretary, John S. Lang; Superintendent, Sidney Deming.

The Ridge Avenue and Manayunk.—President, Charles Thompson Jones; Secretary and Treasurer, Alfred L. Clay; Superintendent, William Kirk.

The Fourth and Eighth (Germantown).—President, Chas. Harlan; Secretary and Treasurer, William H. Singerly; Superintendent, Oliver Evans.

The Richmond and Schuylkill.—President, J. R. Flanigen; Treasurer, Charles S. Wayne; Secretary, James D. Keyser; Superintendent, Edwin Irwin.

The Hestonville, Mantua and Fairmount,—President, John Hunter; Treasurer, A. D. Boileau; Secretary, S. M. Zulick.

The Seventeenth and Nineteenth.—President, Joseph Brower; Treasurer, Joseph Champion; Secretary, P. B. Winning; Superintendent, William P. Cooper.

The North Philadelphia (to Germantown).—President, Nathan Smedly; Secretary and Treasurer, Jeremiah Bonsall.

The Chesnut and Walnut.—President, Charles Harlan; Treasurer, E. B. Edwards; Secretary, George T. Thorn; Superintendent, Hiram Castor.

The Thirteenth and Fifteenth.—President, A. C. Harmer; Treasurer, N. F. Campton; Secretary, Henry Haines.

The Delaware County, (Twenty Fourth Ward).—President, E. Spencer Miller; Treasurer, James Miller; Secretary, Albert L. Bonnaffon; Superintendent, Joseph Powell.

Insurance Dividends.

The New York Fire and Marine Insurance Company has declared a dividend of 10 per cent., payable on demand. The Irving Fire Insurance Company a semi-annual dividend of five per cent., payable on and after the 10th inst. The Indemnity Fire Insurance Company a half-yearly dividend of five per cent., payable on demand. The New York Life Insurance and Trust Company a dividend of five per cent. on the capital stock, and also a surplus dividend of five per cent., payable on demand. The City Fire Insurance Company a dividend of $7 per share, payable on the 13th inst. The Niagara Fire Insurance Company a semi-annual dividend of 10 per cent., payable on demand. The Lorillard Fire Insurance Company a surplus dividend of 19½ per cent., payable on the 6th inst.

Bank Dividends.

The Citizens' Bank have declared a semi-annual dividend of four per cent. payable on the 13th inst. The Oriental Bank has declared a semi-annual dividend of 3½ per cent. payable on the 10th inst. The United States Trust Company have declared a semi-annual dividend of 4 per cent. payable on the 10th inst.

Railroad Dividends.

The New York Central Railroad Company have declared a semi-annual dividend of 3 per cent. payable on the 20th inst.

The Pennsylvania Coal Company has declared a semi-annual dividend of 3½ per cent. payable August 18th.

Belleville (N. J.) Railroad.

The annual meeting of the Stockholders of the Belleville Railroad and Transportation Company was held in this city yesterday morning. The executive officers, through J. P. Jackson, Esq., made a verbal report of the routes proposed for the road from Belleville to intersect the New Jersey Railroad, which have been surveyed, examined and estimated upon during the past year, whereupon it was

Resolved, That the subject of routes be continued with the Committee, to take further and final action on the subject.

The estimated cost of the right of way and building the road, exclusive of equipments, is about $200,000. The supplement to the charter passed by the last Legislature, authorizing four additional directors, and allowing the road to terminate north of the present Belleville Bridge, was accepted. It was resolved to proceed with the construction of the road as soon as $35,000 additional subscription is secured—all of which (except about $2 000) has been pledged. The balance will probably be obtained within a few days. The work can be completed within fifteen months after its commence-

ment, and it is hoped to have the road in operation by December, 1861.—*Newark Daily Mercury, Aug. 7.*

Rockport and Gloucester Railroad.

We learn that a contract has been made with Mr. Gilmore, a prominent railroad constructor, for building and grading the railroad to Rockport, the whole to be completed by May 1, 1861.—*Gloucester Telegraph.*

RAILROAD IRON.

ENGINEERING WORKS.

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.
In recommending it to their patrons, **TIFFANY & CO.**, after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.

WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength. For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE. Secretary, 90 Wall st., N. Y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

On Coal-burning and Feed-water Heating in Locomotive Engines.

By Mr. D. K. CLARK, *Assoc. Inst. C. E.*

The object of the paper was stated to be, to discuss and compare the existing practice of coal-burning on railways. In burning coal, it was necessary to introduce air, in such quantity as to maintain a sufficiently high temperature in the furnace, and so to distribute it amongst the solid and the gaseous portions of the fuel, as to effect the thorough mixture of the air and the gases. After noticing the insufficiency of the ordinary locomotive boiler in its normal condition for the proper combustion of coal, the author described the methods introduced within the last two years for admitting air above the fuel, amongst the combustible gases. They were classed as—first, acting by currents of air, introduced through tubular or other openings in the sides of the fire-box, uniformly distributed over the surface of the fuel; secondly, by deflection of a body of air, introduced through the doorway, or elsewere, upon and over the surface of the fuel; and, thirdly, by constructing large and spacious fire-boxes, with large grates and long runs. The third class, which was first in chronological order, was represented by the systems of Mr. M'Connell, Mr. Beattie, and Mr. Cudworth. Of these, the first and second were made with combustion chambers projected into the barrel of the boiler, and the second had, in addition, transverse midfeathers, and brick arches and tiles, for the better mixture of the elements, and the maintenance of the temperature; whilst the third consisted of an elongated fire-box, with an inclined fire-grate sloping towards the tube-plate. In the application of the first and second classes of smook-burners, the problem resolved itself into the following conditions:—The immediate and thorough intermixture of a plentiful but regulated supply of air, with the ascending smoke or combustible gases at or near to the surface of the fuel. Practically, it was found necessary for this object to operate from both the front and the back of the fire-box, with air entrances, arches, and deflectors at the doorway, in various combinations. But such contrivances as dealt with air in bulk, though generally effective in preventing smoke, were stated to be usually attended by the escape of a considerable quantity of unconsumed air, through the flue-tubes, and a difficulty in keeping up steam at high speeds. The various forms of doorway deflectors were also stated to be objectionable, in facilitating, by their mode of action, the suction of particles of coal through the tubes, and the burning of the smoke-box, unless counteracted by an internal arch. The author had found by experience, that to burn smoke when the engine was working, it was sufficient that the air should be admitted at or near the surface of the fuel, by air-tubes distributed over the width of the fire-box, in the front and the back, without the aid of internal arches or deflectors. The draft of air through the front tubes was very strong when the engines ran ahead, carrying the currents into the middle of the fire-box, where they met the counter currents from the back, effecting the mixture of the air and smoke, and preventing the suction of small coal through the tubes. But, in all systems applied to ordinary fire-boxes operating by means of the draft available in a locomotive engine, aided, when the blast was off, by the steam jet in the chimney, range of power was wanting to overtake the extremes of intense ignition and rapid generation of smoke-making gases, immediately after the steam was shut off, or when fresh fuel was added; and to suit itself, also, to the quite state of the fire, when the glow and excitement subsided, as well as to all the varying conditions of a locomotive furnace. The means of extending the range, volume, and power of the air-currents, and of adjusting them to the wants of the furnace, were supplied by the instrumentality of jets of steam, employed by the author as means of inducting and accelerating currents of air. The steam-nozzles, with the air tubes towards which they were pointed, were like so many miniature blast-pipes and chimneys turned into the fire-box; and they possessed, relatively, the same power of urging and creating draft. By this method of steam induction, the air-currents were delivered with such precision and velocity, as to sweep the whole surface of the fuel, and forcibly to distribute the air amongst the gases.

In practice, it was only occasionally necessary to put the steam-jets in action when the engine was at work if the air-openings were sufficiently numerous, as the action of the blast alone drew a large supply of air through them into the fire-box. The time when the full inducting power of the jets of steam was in demand, was immediately on the steam being shut off from the engine, on drawing up to a station, or otherwise. Then, the heat in the fire-box was fierce, and there was an extensive distillation of combustible gases, which were discharged as smoke from the chimney unless met and consumed by the inducted currents above the fuel. The intenseness of the heat subsided rapidly, and the jets could be moderated as desired, and continued in action until the engine was again in motion. The indraft of air into the fire-box could be regulated by the use of slides or dampers over the air-openings. But, by so limiting the number of air-openings, and consequently the supply of air, as to prevent any material excess of supply when the fire was in ordinary condition, the dampers might be dispensed with in practice, without prejudice to the economy of fuel.

In making a general comparison between the various methods of coal-burning without smoke, there was the difficulty of the diversity of circumstances as to time, fuel, engine, and duty to contend with. The performances of several engines burning coal, on different systems, and the same on similar engines using coke, had, however, been tabulated. It thus appeared that, of the three systems of extended fire-boxes, by Mr. M'Connell, Mr. Beattie, and Mr. Cudworth, with nearly equal gross weights of engine, tender, and train—100 to 116 tons—and at about the same speed, the consumption of coal was as follows:—

Mr. M'Connell's, 35½ lbs. Hawkesbury coal per mile, or .310 lb. per ton gross.

Mr. Beattie's (with cold water), 24 lbs. Griff & Stavely coal per mile, or .235 lb. per ton gross.

Mr. Cudworth's, 26 lbs. coking coal per mile, or .225 lb. per ton gross.

Of the system of coal-burning grafted on the common fire-box, with passenger trains, comparative results were given of Mr. Douglas' with a doorway deflector on the Birkenhead Railway; Mr. Yarrow's with a brick arch and air-bars on the Scottish North-Eastern Railway; Mr. Connor's with a brick arch and door deflector on the Caledonian Railway; Mr. Frodsham's with a doorway deflector and steam roses in the fire-box, used by Mr. Sinclair on the Eastern Counties Railway; and the author's with air-tubes and steam-inducted cur-

rents, used by Mr. Cowan on the Great North of Scotland Railway. It appeared that, with eight to ten carriages, the following were the performances:

	Gross weight. tons.	Gross coal per mile. lbs.		Per ton gross. lb.	
Mr. Douglas..	90	28.4	or	.32	Welsh.
Mr. Yarrow...	86	25.7	or	.32	Fifeshire.
Mr. Connor...	88	22.2	or	.26	Lan'kshire.
Mr. Frodsham.	93	23.3	or	.25	Stavely.
Mr. Clark....	110	21.0	or	.19	Fifeshire.

—showing that, with the author's system, less coal was used with a heavier train than with any of the others. Similarly favorable comparisons were made in the working of goods engines.

The Great North of Scotland Railway, on which the author's system was in full operation, was stated to contain long gradients, several of which varied from 1 in 100 to 1 in 150, with frequent curves; and the goods engines could take up these inclines 35 fully loaded wagons, 460 tons gross train weight, at 10 miles per hour.

In conclusion, it was stated that the author's system of smokeless coal burning was distinguished from others by its simplicity, durability, efficiency, and simple management. There was no construction of any kind within the fire box, and, consequently, no wear and tear by exposure to intense heat. At the same time that it commanded the entire range of the fire box, it did not interfere with or impose extra labor in the management of the fire. The manipulation was simple; the air-tubes being placed at a sufficiently high level to command the surface of the fire at all times. The whole business of smoke-prevention was comprised in the occasional operation of the induction-jets, by means of a tap under the hand of the engine-driver, and the occasional aid of the chimney-blower, to carry off the products of combustion. By the proper use of this system, the fire might be "damped," or kept dull, when desired, where an engine had to wait at a station, without raising the pressure of the steam; as the forcible indraft above the fire might be made to prevent a draft through the fire, and consequently to check or to suspend the combustion of the fuel; conducing both to safety and to economy, and favorable contrasting with other systems, in all of which a powerful blower in the chimney was needed, when standing, incurring dangerous pressures and waste of steam.

In feed-water heaters, it was stated that little had as yet been done, except by Mr. Beattie, whose apparatus, though efficient as a heater, was found, it was believed, to be too complicated for general use, and difficult to keep in order. The author had recently introduced a simple and compact heater, in which the steam from the blast-pipe was projected into a short tube, in conjunction with the feed-water, which was delivered in a thin annular sheet around the steam-nozzle. In this short tube or chamber, the water was broken into spray by the steam; the steam was instantly condensed, and the water was raised to a high temperature, at or near the boiling point. It had given satisfactory results in a 20 H. P. stationary engine, and would shortly be applied to a locomotive engine. It was said to be well adapted for agricultural and other engines on wheels, where lightness and compactness were considerations of importance.

In the course of the discussion upon Mr. D. K. Clark's paper, "*On coal-burning and feed water heating in locomotive engines*," it was remarked, that the plan of coal-burning advocated by the author seemed to be similar to that adopted by Mr. Jenkins, and which had been some time in use on the Lancashire and Yorkshire Railway, except that in the former jets of steam were employed to accelerate the currents of air. Mr. Jenkins' system consisted simply in making a certain number of the stays hollow instead of solid, through which the air was allowed to pass, and, mixing with the products of combustion, effected the prevention of smoke. Movable slides were fixed on the outside, so that the apertures could be opened or closed at pleasure; and thus, either coal or coke could be burned in the same engine. The system could be applied to old engines, at an expense of a few pounds per engine, and was said to be simple and effective.

It was stated that the use of tubes through the sides, and in some cases the front, of the fire-box, for preventing smoke, had been tried nineteen years ago by Mr. Samuel Hall, the pioneer of surface condensation, on the Midland Railway. The smoke, though then not entirely consumed, was believed to have been as effectually got rid of as at the present day. Formerly the defect was, that the tubes were burned; but where coal could be obtained at much less cost than coke, a want of simplicity, or the necessity of slight additional repairs, might be overlooked. When first brought forward, an objection was taken to Mr. Hall's plan, that when an engine was standing at a station, black smoke was emitted. This was remedied by the introduction of a small jet of steam in the chimney, for creating a draft when the engine was at rest; but the noise thus produced caused the plan to be laid aside.

In regard to the general question of smoke-prevention, it was argued that neither deflecting plates nor brick arches were needed; but only the introduction of a sufficient quantity of air, moderately diffused over the fuel. In 1856, the use of hollow stays and small jets of steam had been suggested by Mr. Robert Longridge, particularly for marine engine boilers, where there was a difficulty in getting the proper quantity of air through the tubes; but it was thought that, in a locomotive, the requisite quantity of air to consume the hydro-carbons might be introduced by the hollow stays, without resorting to steam jets.

As to the comparative heating powers of coal and coke, it was sometimes asserted that the same evaporative effect would be obtained from the coke made from a ton of coal, as from the original ton of coal itself. This view was dissented from, and it was stated that careful experiments with Garesfield coal and coke showed the evaporative power to be as 100 to 89, respectively, weight for weight. In other words, 1 lb. of coal evaporated 12.54 lbs. of water, whilst 1 lb. of coke evaporated only 11.16 lbs. of water. But, inasmuch as 100 tons of coal produced only 66 tons of coke, it was evident that while 1 lb. of coal would evaporate 12.54 lbs. of water, the same weight of coal, converted into coke, would only evaporate $11.16 \times .66 = 7.44$ lbs. of water; so that the true proportion was as 100 to 58.

On the other hand, it was stated that, with Midland coal, 20 cwt. of coal produced 11½ cwt. of coke, besides other products, and 6 cwt. of coke evaporated exactly the same quantity of water as 7 cwt. of coal; consequently there was a loss in converting coal into coke, for the purpose of producing steam; but considered only in reference to weight, coke had an advantage over coal in the proportion of seven to six.

It was contended that, in order to enable a proper comparison to be made between the amount of fuel used per mile and the gross load carried, the paper should have showed—1st. What was the greatest altitude surmounted in each case, the total length of the line, the ruling gradient and its length. 2d. What was the average speed per mile for the whole distance run. And, 3d. How many lbs. of water were evaporated by 1 lb. of coal.

It was observed that, in attempting the general introduction of anthracite coal in locomotive engines in the United States for long and heavy traffic, it was found that, although there was no smoke, it was difficult to keep up the steam, and the fire-box and firebars were quickly burnt out. Notwithstanding these objections to its use, anthracite was in some cases a cheaper fuel than wood. Anthracite coal was burned on the Reading Railroad at the rate of 120 lbs. per mile, in engines weighing 28 tons, and carrying a gross load of 750 tons, at from ten to twelve miles an hour, on a level. The evaporation of water was from 5⅓ lbs. to 6 lbs. only per pound of coal. A brief description was given of Phleger's, Dimpfel's, and Boardman's boilers, which had been made to burn bituminous as well as anthracite coal, and were used on passenger as well as goods trains. Each furnished considerable space for combustion, and air was admitted in numerous fine streams over the fire. They were all, however, heavy and complicated, and inapplicable to existing stock. Within the last three or four years, renewed attempts had been made to adapt the existing stock of engines to the use of bituminous coal. The difficulties consisted in the large quantity of coal required to be burned in a given time, under an intense draft, and in the clinkery character of the coal itself. The engines were not heavier, on the average than in England, nor had they more heating surface; but they burned more fuel and evaporated one-fourth more water in a given time. In December, 1856, Mr. G. S. Griggs, of the Boston and Providence Railroad, introduced a fire-brick arch, below the tubes, in the fire-boxes of some of the engines of that line. With a few holes for the admission of air above the fire, this arch was found to improve the working of the fire box, when burning coal. On the Iowa Central Railroad, the grates of the coal-burning engines were at one time covered with fire brick, so as to leave only about two square feet of the original surface of the bars exposed; and of this area, less than one square foot was air-opening. More recently, perforated door-plates and air distributors (the latter set up within the fire-box) had been extensively adopted.

It was stated, in reply to the observations which had been made, that in a comparative trial of the author's system and Mr. Jenkins', on a metropolitan railway, on the same passenger engine, and on the same duty, the former consumed 4 lbs. per mile, or 12 per cent., less coal than the latter; that the saving of coal by smoke prevention in locomotives had been found to be at least 18 per cent.; that the information demanded, for the purpose of making a proper comparison, was given in the paper; that it was of no use to state altitudes simply, unless particulars of inclines and length of trip were also given.—*Proc. Inst. Civ. Eng., May* 1–8, 1860.

Third Annual Report of the Houston Tap and Brazoria Railway Company.

To the Stockholders.—The close of the last fiscal year, ending April 30th, 1859, exhibited a gloomy and uncertain condition of our enterprise, produced from the withholding of the State loan by the Comptroller and Treasurer of the State, and though your Board of Directors, felt an abiding confidence in the ultimate possession of this fund, yet its non-receipt on the completion of the first section of the road, predicated upon which purchases of iron, chairs, spikes, &c., had been made, the obligations for which were maturing, produced a degree of embarrassment and financial distress that for the moment we found it impossible to overcome; causing an entire suspension of work on the second section of the road. In the month of June and July these difficulties were very seriously aggravated by the arrival of 2,000 tons of rails purchased for the completion of the road to Columbia, upon which the duties and freights, amounting to above $40,000, must be promptly met or the iron must go into bond at Galveston, attendant upon which the expense to the company would be largely increased.

In this emergency, funds were procured through the individual liberality of the Directors and a few others friendly to the enterprise, the duties and freights at Galveston were paid and the rails landed in Houston, at which time track-laying was resumed on the second section of the road, but for want of means progressed very slowly.

In June a mandamus suit was brought against the Treasurer of the State to compel the payment of a warrant drawn by a majority of the Board of School Commissioners for $150 000, on the completion of the first 25 miles of the road. The case was tried in the District Court of Travis county, before Judge Terril in July, and a decision upon demurrer given against the company. An appeal

was taken to the Supreme Court, and in December a decision was had, sustaining the action of the lower Court. The Legislature being in session, a bill was immediately introduced for relief, which was, in a few days, almost unanimously passed, placing us in as good condition as the most favored road in the State. Your Board of Directors now being able to avail themselves of the State loan on 35 miles of completed road, amounting to $210,000, received the same on the 22d December last, $42,000 of which was paid to the city of Houston as a loan, in accordance with the contract made in the purchase of the Tap road, May 29th, 1858, and the balance appropriated in liquidating the debts of the company incurred for iron, rolling stock, &c. The failure to get the loan on the completion of 25 miles of road, was attended with a loss to the company of not less than $25,000, together with the earnings of the second section of the road during the whole business season of the year.

Active operations were immediately commenced and the work rapidly pushed forward so that the track laying was completed to Columbia early in March, during which month an effective force of men were employed in ballasting the road, building turn tables, &c., so that on the 1st of April daily trips were commenced, and have, up to this time, been regularly continued.

The liabilities incurred in the construction of the last 15 miles of road, with the balance of the old bills, are pressing heavily upon the Board of Directors; caused by the failure to get the State loan on the last 10 miles of completed road, in consequence of the fund having been exhausted west of the Trinity river. The close of the year again finds us still suffering from financial embarrassment.

In addition to the completion of the road to Columbia, there has been built two turn-tables, one at each end of the road. A station house at Arcola; a depot and station house at Sandy Point, with wind mills at both places for pumping water. Similar improvements are now required at Oyster Creek and Columbia, and depot buildings at Arcola and at the junction of the Harrisburg road. When these improvements are completed and the entire road ballasted with sand, which is found at convenient points on the line of the road, the work on which has been rapidly progressing, the entire distance to Columbia will be in good condition for the next fall business.

The continuation of the road to Wharton, now nearly all graded and cross-tied, with the probable construction of the Matagorda Tap will add greatly to the traffic of the road and secure a large passenger trade from the coast counties.

The report of the Chief Engineer and Superintendent, will show the present condition of the Wharton extension.

The machinery and rolling stock of the road, consisting of two locomotives, one six-horse engine, one passenger car, one second class do., seven box and eighteen platform cars have, to this time, been sufficient for the business of the road; but now, with trains running daily to Columbia it will be necessary to increase the amount of rolling stock by the addition of another locomotive, five box and ten platform cars, to make it adequate to the business of next fall. It will also be necessary, during the coming year, to erect a suitable machine shop with the necessary machinery to be able to meet the increased business of the road.

There has been charged to construction account on the 43½ miles road to Columbia, up to this date, $420,401 55 and $22,926 93 to equipment account, showing the cost of the road, with rolling stock included, less than $11,000 per mile, which is by far the cheapest road ever built of the same distance in the world.

It has been the policy of your Board to keep the road and machinery in as good order as possible, with careful engine drivers and other operatives, the result of which has been great regularity in the running of the trains with almost an entire exemption from accidents. The connection with the Harrisburg road has been and still is a fruitful source of difficulty. No permanent arrangement has yet been made for transportation of freight from this point over that road. The erection of a depot at the junction of the two roads where freight can be transhipped now seems to be the only plan that can be advantageously pursued by your road.

The reports of the Secretary and Treasurer, and Superintendent and Engineer of road will be submitted with this, exhibiting in detail the amount of disbursements, cost of road, &c.

For the construction of the road from Columbia to Wharton, arrangements are now being made for funds to purchase iron, rolling stock, &c., with the expectation that the iron will be laid in time to take off the growing crop. Of the land bonus granted by the State, 400 sections have been drawn, a few only of which have been sold.

The accumulation of the School Fund in the State Treasury, it is expected, will be sufficient during the year to enable the company to draw the loan of $60,000 on the last ten miles of completed road. All of which is respectfully submitted.

E. W. Taylor, President.

Houston, May 1, 1860.

Cedar Rapids and Missouri River Railroad. Chief Engineer's Report.

To the Hon. L. B. Crocker, *President C. R. & M. River R. R.:*

Sir:—I have the honor to submit to you, and through you to the Board of Directors, the following report.

In accordance with the directions of your Executive Committee, I organized a party, and during the month of May made a preliminary survey of that portion of your line between Cedar Rapids and Marshalltown, in Marshall County—a distance of 71 miles.

The line commences on the west bank of the Cedar river, opposite the terminus of the Chicago, Iowa and Nebraska Railroad, and runs thence about three miles in a south-west direction to the valley of Prairie Creek. It then follows this creek and one of its tributaries, a distance of 28 miles, in a nearly due west course. The work on this portion of the line is remarkably light—but little being required beside throwing out the ditches.

From this point the line passes about 22 miles to the valley of the Iowa river, across a country which is quite broken, and heavy work is encountered in crossing the summits, at three different places. The line runs thence to Marshalltown, 18 miles, in a very direct course, bearing a little north of west and following the Iowa river valley all the way, except for about four miles west of Butlerville, where the river makes a large bend to the northward.

The line passes through or near the towns of Irving, Redman, Toledo, Butlerville, Le Grand and Marshalltown.

The following is a summary of the estimate of the cost of the 71 miles of road, complete in all respects, and ready for the rolling stock:

Right of way and station grounds	$10,000
Grading and bridging	300,632
Iron	355 000
Chairs and spikes	56 800
Ties	71,000
Track-laying and ballasting	71,000
Fencing	50,481
Buildings	37,600
Engineering, rents, interest, &c.	41,487
Total	$994,000

At the present prices for labor and materials, the road can be built for cash at the above figures, and probably at something less—but to provide for all possible contingencies, I have added 1 and 4-10ths per cent. to the above estimate, which gives for the total cost of the 71 miles, $1,065,000, or $15,000 per mile.

In case the proposition of the Chicago, Iowa and Nebraska Company to equip and operate the road for a per centage of the earnings, should not be accepted by this company, $2,000 per mile additional would be required to furnish rolling stock for this division.

The maximum grade on this line, going west, is 55½ feet per mile, and coming east no grade exceeds 40 feet per mile. The curves are light, all having, with two or three exceptions, radii of 2,855 feet. An abundance of excellent timber for ties is found along the entire route.

While this route possesses several important advantages, I would not at present advise that it be adopted as a final location. A very feasible, and perhaps a cheaper and better route will be found by going more directly west from Cedar Rapids, and following the divide between the waters of Cedar river and Prairie creek. I would recommend that this line be surveyed, and also that some side lines from the present one be examined with the instruments.

I have procured from various sources, reliable data, obtained by a preliminary survey made by the late Iowa Central Company, of that portion of the line between Marshall and Des Moines river, a distance of about 50 miles.

The country is very similar in character to that along the first 71 miles of the line, and the cost of grading and bridging will average very nearly the same per mile. I feel confident, therefore, that the cost of the first 121 miles of your road will not exceed $15,000 per mile.

From the information I have been able to obtain in regard to the surveys made by the late Iowa Central Company, of that portion of the line between the Des Moines and the Missouri rivers, I am of the opinion that an equally feasible route can be there obtained, but yet I have not sufficient data at hand to justify a detailed estimate.

In reference to your entire line of road, I beg leave to submit the following brief remarks:

The line extends from Cedar Rapids, the terminus of the Chicago, Iowa and Nebraska Railroad, in a due west course near the 42d parallel of latitude, to Onawa, on the Missouri river, a distance of 233 miles, according to the survey of the late Iowa Central Company. It passes through the following counties, which form a portion of those generally known as the "Central Tier," viz: a part of Linn, through Benton, Tama, Marshall, Story, Boone, Greene, Carroll, Crawford and Monona.

The Chicago, Iowa and Nebraska Railroad, running directly east from Cedar Rapids 81 miles, connects your line with the Mississippi river and the Fulton line of the Galena and Chicago Union, which is the only railroad running due west from Chicago. A substantial bridge has recently been completed across the eastern channel of the Mississippi river at Clinton, and arrangements will be completed during the present month, for the transhipment of loaded cars across the western channel, which is only some 700 feet wide. You will be able, therefore, to send loaded cars from the Missouri river to Chicago, and if desirable to more eastern cities, without breaking bulk.

Your road and its connections with Chicago, being due east and west roads, enables you to reach any given longitude crossed by your line, in from 30 to 40 miles less distance from Chicago than any other road now built or projected.

If a road can be well built, at a small cost, on the shortest possible line between its termini, through a fertile and well-settled country, which is tributary to some great commercial centre from whence it starts, and more than all if it forms a link in a great through line, and can therefore draw the large portion of its business over its entire road—such a road may confidently be relied upon as a paying investment. Your line combines all these requisites to an unusual extent.

The country between Cedar Rapids and the Missouri river is rolling prairie, frequently intersected by beautiful valleys and swift running streams of living water. Timber and stone are found in abundance along most of the line.

The valuable grant of land recently bestowed upon your company—exceeding 900,000 acres—embracing a large amount of excellent coal and timber land, all lying within 15 miles on either side of the line, with good management will probably repay the entire cost of building the road from

Cedar Rapids to the Missouri river. A large portion of the reserved Government sections have already been taken up without the advantages of a railroad, at the advanced price of $2.50 per acre.

The four western counties of Greene, Carroll, Crawford and Monona, between the Des Moines and Missouri rivers, had no inhabitants in 1852. The census of 1859 gives them a population of 2,985, and a valuation of $2,585,885.

The total population, therefore, of the counties traversed by your line in 1859 was 47,663, and the valuation $17,269,284.

The commencement of work on the road will give a strong impulse to business and emigration, and the increase in population and wealth will be even more rapid than it has been in the past few years.

The great coal field of Iowa is traversed by your line for a distance of more than 100 miles. The coal is easily mined—the top veins in many places being above the beds of the streams and very near the surface of the ground. It has been mined at several points sufficiently to test its good quality and inexhaustible quantity.

Iron ore, hydraulic cement and gypsum are also found on the line of the road.

Although the prospects of your road for a large way business are so flattering, yet its importance as a link in a great through line should be kept constantly in view.

It cannot only be much more cheaply built, with much lighter grades, and with 30 to 60 miles less distance from Chicago and the East, than any other road across the State, but reaching the Missouri river, as it does, in the latitude of Chicago, the Platte Valley and the great South Pass, it cannot fail to become a most important link in the great chain of roads which will soon stretch across the continent.

A company has already been organized (the Decatur and South Pass Air Line Company) to extend your line from Decatur, on the Missouri river, 82 miles westward to the great north bend of the Platte river.

This line, as well as a line up the Platte Valley as far as Fort Laramie, has been surveyed and both are reported to be unusually favorable for the construction of a railroad, at a small cost. The Platte Valley is the route now traversed by more than four-fifths of all the Pike's Peak and overland California emigration; and as immense as it is at present, the business of that valley is destined to increase every day.

By the uniform testimony of many who are well acquainted with the business of the Platte Valley, I am warranted in advancing the opinion, that were your road completed to the Missouri river at the present time, it would pay a reasonable per cent. on its cost.

The importance of its early completion, in advance of other lines, and before the channels of trade and travel shall have become in any manner fixed, cannot be easily over estimated.

W. W. WALKER, *Chief Engineer.*

Cedar Rapids, Iowa, June 13, 1860.

South Carolina Central Railroad.

The Lancaster (S. C.) *Ledger* makes the proposed route of the South Carolina Central Railroad, from Charlotte (N. C.) to this city, even more favorable than we were authorized to do by the figures before us at our last report. We shall be pleased of course to learn that examination and surveys confirm the *Ledger's* estimates, which are as follows:

According to the estimates we have received from persons familiar with the location, the length of route is as follows: Charlotte to Lancaster, 35; Lancaster to Bishopville, 43; Bishopville to Sumter, 20; Sumter to Manning, 18; Manning to Gourdin's, 20; Gourdin's to Charleston, 50—making a total of 186 miles, of which there will be 136 miles of new road.

The distance from Charlotte to Charleston via Columbia is 247 miles; so that the difference in favor of our road, when completed, will be of 61 miles; a difference in this day of competition among railroads of very material importance, and in our judgment, quite sufficient to enlist the earnest efforts of both Charleston and Charlotte in the enterprise.—*Charleston Paper.*

Journal of Railroad Law.

LIABILITY OF A RAILROAD CORPORATION, UPON THE COVENANTS CONTAINED IN AN ASSIGNED LEASE.

The case of Van Schaick *vs.* Third Avenue Railroad Company, recently considered by a Special Term of the New York Supreme Court, illustrates some of the principles of law relative to the assignment of leases, which may be of interest and perhaps of value, to our readers.

It appears that the plaintiff executed a lease of premises to Henry Van Schaick the trustee of an association, of which the defendant was successor. The association transferred all its property to the defendant, and caused the lease to be assigned to the defendant, and the latter covenanted to do and perform all things which the association were bound to do.

The question was upon the liability of the assignees of the lessees for violation of the covenants in the lease, between the original lessor and lessee, and the case holds that assignees of leases are only responsible for violations of the covenants, which occur while the premises is in their possession, although the facts in this case were such as to make the defendants responsible. The opinion is as follows:

DAVIES J. If the defendant can be regarded as standing only in the position of assignees of the lease made by the plaintiff to Henry Van Schaick, then they are not liable to the original lessor, the plaintiff, for rent which has accrued since they ceased to have possession of the demised premises. If they are only assignees of the lease, they are not liable for any breaches of the covenants of the lease since their assignment of the lease to Searles.

The Court in Carter *vs.* Hammett held that "the only liability of the assignees at any time was the result of their possession, and was limited in its duration by the operation of that possession. * * The rule in such case is—and it is well founded on the principles of justice and implied contracts—that each successive party, other than the original lessee, is liable by reason of, and for the term of his own possession. Possession is, therefore, both the foundation and boundary of the libility." Chancellor Walworth, in Childs *vs.* Clark says: "It is perfectly well settled, however, that the assignee of a lease is only liable, as such assignee, for the rents which accrued or became payable, or for other covenants broken, while he was such assignee; and he may discharge himself from all further liability by assigning his interest in the premises to a stranger, even if the assignee is a beggar; provided he actually relinquishes the possession of the premises and all interests therein, so that the assignment is not merely colorable or fradulent. For as there is no privity of contract between the lessor and the assignee of the lease, the latter is personally liable only in respect to his privity of estate in the land, or in respect to covenants running with the land, for the rents which accrued and became payable after such privity of estate commenced, and before it terminated; that is, while he enjoyed or had the right to enjoy, the premises, or some part thereof, as an assignee of the lease. * * * *

It is clear therefore, upon the authorities referred to, that if the defendants stand in the character of assignees solely, they are not liable for any rent accrued since their assignment to Searles. But it appears to me that the facts disclose an entirely different case, and by it their liability is to be tested.

The lease was in fact made to Henry Van Schaick, as the agent or trustee of the company of which the defendants are the successors. The original association or company assumed all the covenants of the lease, and the present defendants have taken from the association all its property, with covenants to do and perform all things which the association were bound to do. And immediately upon the execution of such transfer by the association, and to effectuate and carry into effect the grant made by it to the defendants, Henry Van Schaick, the trustee and agent of the association, assigned the lease to the defendants.

The defendants are therefore the true owners of the lease, and Van Schaick held it for their benefit. If he had refused to transfer it to them, this court would have compelled him to do so. He did voluntarily what he was under a legal obligation to do, vest the title to the lease in the name of his principal. It cannot be denied that if Henry Van Schaick had been sued for the rent reserved by this lease, or was about being sued therefor, he might maintain his action against these defendants to compel them to relieve him from the position he occupied as their trustee and surity.

I think, therefore, when the defendants took the assignment of the lease from Van Schaick, on the organization of this company, they but carried out and give effect to the intention of the parties, that when the company should become legally organized and competent to take title, they were to become the lessees of the premises, and subject to the performance of all the covenants, on the part of the lessees. Regarding the transaction in this light, and which I am satisfied is the true aspect in which to regard it and which is confirmed by the acts of the parties, the case of Lorillard *vs.* Lorillard is not without significance. In that case it was clearly intimated that if the original lessee was the mere instrument of the subsequent assignee, and in fact it was not intended that any title should vest in the original lessee, then that the subsequent assignee might be liable to pay the rent, even though he had assigned the lease. These views were expressed upon the principle that the real party in interest should pay the rent, and that when that party was discovered he might be made liable. In this case there can be no controversy that the original association was in fact, though not in name the true and actual lessee; and it seems to me that the defendants have assumed the same position, and have subjected themselves to the same liabilities.

There can be no doubt that Henry Van Schaick is liable to pay this rent, and standing as he does in my opinion, as surity for the defendants, his creditor can avail himself of his right primarily, to call upon the defendants to pay directly to him, instead of compelling Henry Van Schaick to pay him, and leave him to call upon the defendants for reimbursement.

This rule is laid down in Curts *vs.* Tyler and is every day followed in this court. In that case the plaintiffs were held entitled to avail them-

selves of a security given to the debtor for the payment of the debt owing to them. The Chancellor says: It is well settled, however, that when a surity, or a person standing in the situation of a surity for the payment of a debt, receives a security for his indemnity, and to discharge such in debtedness, the principal creditor is in equity entitled to the full benefit of that security. And it makes no difference that such principal debtor did not act upon the credit of such security in the first instance, or even know of its existence."

I, therefore, hold, that the defendants contracted with the plaintiff through Henry Van Schaick, as their agent or trustee. * * * * * The plaintiff is entitled to judgment, that the defendants perform with him all the covenants of the lease to be kept and performed by the lessees.

The Liability of a Railroad Company as Common carriers, for Damaged Goods.

The following important decision was rendered in the New York Court of Common Pleas, last week, in a suit brought by Franklin W. Hunt, against the Michigan Southern and Northern Indiana Railroad Company. Judge Daly thus presented the facts:

When the goods were delivered to the defendants' agent they were in good order. The witness who helped to pack them and who carried the boxes to the railroad station, testified that it was a fine day; that the goods were dry and in perfect condition. When the goods were found by plaintiff at the depot of the New York and Erie Railroad Company, three weeks after they had been shipped, the boxes, according to his testimony, appeared externally in good order; but upon opening them he says that there was hardly anything that had not been wet; that most of the things had been soaked through, and that it took a week to dry them, after spreading them out. They consisted of books, clothing and bedding, and the bedding was all mildewed.

Upon such a state of facts, it was incumbent upon the defendants to show that the goods sustained no injury while in their custody—that is from the time that they received them at the Rolling Train station until they delivered them to the agent of the Cleveland and Toledo Railroad Company, to be forwarded to the place of destination. The only evidence they offered was that of the shipping clerk at Toledo, who, of his own knowledge, knew nothing of the condition of the goods when they were received at Toledo and forwarded by the Cleveland and Toledo Railroad, and did not recollect that he had seen the goods at all. All he knew was, that he made out the bill of lading at Toledo, which was forwarded with the goods, and that from the entry in his book six packages, consisting of five boxes and one trunk, were received on the 8th of April, 1854, addressed to F. W. Hunt, Bergen, N. J.

He further testified that it is the duty of the receiving and shipping tally-men to examine and see the condition of goods both when they are received and when they are delivered—that if the packages appear wet, and the property can be saved by opening the package, that they are generally opened, but that if slightly wet they do not always open them. That if they appear to have been wet and are not opened, a memorandum that they appear wet is made upon the way-bill, and that in making up the bill of lading, it is usual to note the condition of the package, and that the party receiving it always notes that the property is in bad order if such is the fact, if not already so noted before receipting for it; and in reply to a question put to him to which the plaintiff objected, he testified that if these packages had been wet, or had not been in apparent good order, the fact, from the regular course of business, would have appeared upon the bill of lading. The bill of lading signed by the agent of the Cleveland and Toledo Road, was also given in evidence, in which the packages, were noted to be in good order and condition.

The packages had been three days in the defendants' custody before they were received by their agent at Toledo, and the evidence was not sufficient to show that they had received no injury while thus in their possession or in that of their agent. The plaintiff testified that when he opened the packages at the depot of the New York and Erie Railroad Company, that the boxes appeared externally in good order, and the testimony of the defendant amounted to nothing more than that such appeared to be their condition when the defendants' agent forwarded them from Toledo. It was for the defendants to show who had charge of the packages up to the time of their arrival in Toledo, and what care up to that time had been taken of them. It was evidence peculiarly within their power and not to be expected from the plaintiff, and as in setting up their defense they were silent upon that point, I think the judgement was right.

Atlantic and St. Lawrence Railroad.

The annual meeting of this company was held in Portland on the 7th ult. The following gentlemen were elected directors for the ensuing year: St. John Smith, John B. Brown, Charles E. Barrett, Phineas Barnes, John M. Wood, George F. Shepley, James L. Farmer, Byron Greenough, Harrison J. Libby.

The report of the President, St. John Smith, states the road has been very much improved the past year, by making some new bridges, and relaying some of the old stone abutments, and by renewing rails. The number of iron bridges erected by the lessees is seventeen. The debt of the company is as follows:

City of Portland Bonds, loaned to the R. R. Co	$2,000,000
Bonds of the Railroad Company, dated April 1, 1851, on fifteen years, exclusive of those pledged to the city of Portland as collateral	988,000
Bonds of the Railroad Company, dated Nov. 1, 1853, on twenty-five years, payable in sterling currency	484,000
Notes payable	7,000
	$3,479,000
Amount of shares capital	2,494,900
Total	$5,973,900

The amount of the two sinking funds, July 1, 1860, is $324,399 37.

The completion of the Victoria Bridge makes a continuous line, without break of gauge or change of cars, from Portland to Sarnia, nearly 800 miles. A connection is made at Sarnia with Port Huron across the River St. Clair by a ferry boat, by which cars, &c., are taken across and connect with Detroit, sixty-two miles, by railway. Over $230,000 of the capital has been converted into sterling currency during the past year, nearly all of which has been purchased on foreign account. Over two-thirds of the stock is held abroad.—*Portland Advertiser.*

Phœnix Iron Company's Works at Phœnixville.

The U. S. Assistant Marshall, in his census of Phœnixville, Chester County, Pa., gives the following statistics of the Phœnix Iron Company:

Value of real and personal estate	$1,200,000
Raw material used, 133,725 tons, valued at	779,373
Power employed, 15 steam engines, amounting in the aggregate to	1,001 horse-power.
Three water-wheels	90 do.

ANNUAL PRODUCT.

Wrought iron, 23,466 tons, valued at	$1,410,535
Pig iron, 15,794 " "	296,915
Hands employed, average	1,230

☞ R. H. Temple, Esq., of Fredericksburg, has been appointed Superintendent of the York River Railroad, running from Richmond to West Point.

☞ Col. B. Ayres has resigned the position of Superintendent of the Western Division of the Memphis and Charleston Railroad.

☞ N. Slater, Esq., President of the Providence and Worcester Railroad Company, has tendered his resignation, and Mr. Earl P. Mason has been elected President *pro tem.*

General Railroad Intelligence.

The old project of uniting the Harlem and Housatonic Roads at Dover Plains and Kent, where the roads are only eight miles apart has been revived. It is expected that the travel to Lenox, Stockbridge, Pittsfield, Great Barrington and other towns in the beautiful county of Berkshire, would be much increased by the Housatonic road being connected with the Harlem at Dover Plains, and the necessity of carrying the passengers round about through Bridgeport obviated. Berkshire County is admirably calculated for dairy purposes, but it takes too long by the present circuitous route to bring the milk to the New York market. It is believed that the Harlem and Housatonic united would command a large share of the Canada trade by way of the Vermont roads and the Pittsfield and North Adams. The required eight miles to connect at Dover Plains, it is estimated, can be built for $100,000.

The Franklin, N. C., *Observer*, of 31st says: "We learn that the engineers on the location of the western extension of the North Carolina Railroad, are now at work on Scott's Creek, 28 miles from this place, and about the same distance from Nantahala, in this county, where this road and the Blue Ridge road intersect.

We are informed that no considerable barriers to the easy building of a road have yet been found. If the further location finds no greater in future, than the experimental survey experienced, this route will be most favored by the great body of our people. And hence we say to the people of South Carolina, press on with the Blue Ridge road. Within 25 miles of Franklin and 48 of Clayton, Ga., you will meet with a railroad running from the Mississippi to the Atlantic Ocean."

Arrangements have been completed between the New York Central and Harlem Railroad Companies, by which the latter road may share in the through freight and passenger business to and from the city of New York. The Harlem Company are making extensive preparations to transact the increased business which this important arrangement is expected to bring over their line.

The Flatbush Avenue Railroad route, from Fulton Ferry to the town of Flatbush, was opened on Saturday last, and the cars now run regularly.

The Lexington and Big Sandy Railroad was sold on the 9th inst. It was purchased by H. Means and W. T. Nicholas, of Ashland, Ky., for $60,000.

The first shipment of iron for the extension of the Evansville and Crawfordsville Railroad passed through Indianapolis on the 8th inst., and was to be unloaded on the following day, the entire amount necessary to complete the extension being contracted for to be delivered by the 20th of September. Track laying will be commenced immediately, and the road will probably be in condition to use by the time the hog and corn crops seek a market.

The Chicago *Press* of 11th inst., says: "Our railroad men, in view of the immense harvest, are among the best contented members of the business community. Such demands as will this Fall

be made upon their rolling stock, in the freight department thereof, were never experienced before. A promise disappointed in seasons past, this year has been abundantly fulfilled: More grain will be harvested in the Northwest this year, than ever in any two seasons before, and the pressure upon facilities of every kind in getting this grain to market is to be immense. The past few months have been well employed by our railroads in active preparation, at first not immediately with a view to the near approaching need, but this is now the spur. The increase of freight has become so great on the Illinois Central Railway, that the company have decided to add 2,500 freight cars to their already extensive rolling stock.

Other roads are making large additions to their stock, and carrying increased efficiency and thorough working order into every department. Scarcely any Illinois road has seen more marked and important improvement than the St. Louis, Alton, and Chicago, under the efficient Superintendentship of Col. R. B. Mason. The Chicago and Rock Island is also of the same class in present state of efficiency, and there is abundant need of all its facilities. The Chicago, Burlington and Quincy, with its capital westward connections toward the Pike's Peak magnet, together with the splendid agricultural region it traverses in our State, will have made of the present a year that will certainly gratify stockholders. We might go through the entire list of roads centering here to show that they are finding in this year, culminating in this glorious harvest, a reverse of the coveted stamp, the reverse of their experiences and history for several years past. The stock reports will, and indeed are, proving an accurate and sensitive register of this change in the condition of our Western roads."

That part of the Pittsburg and Erie Railroad lying between Jamestown and New Castle, and the cross road from the Ohio State line eastward, together will all the rights, privileges and franchises of the company, were sold on the 26th ult., to Samuel Goodwin and Dr. William Gibson, for the sum of $5,000. The sale was made on a mortgage given by the company to trustees to secure the claims of certain contractors.

James River and Kanawha Canal.

The Richmond *Whig* says that the negotiations pending for several years between M. de Bellot des Minieres, representative of a company of French capitalists, and the James River and Kanawha Company, having for their object the completion of the great water line of that State, were brought to a satisfactory conclusion, on the 25th. The French company stipulate:

To purchase the State's interest, in the Canal, for the sum of $2,500,000.

To purchase the interest of the private stockholders, by the issue of bonds, for one half the amount thereof, the same bearing interest at 5 per cent. per annum, until the completion of the work; and thereafter entitling the holders to a participation in the yearly dividends of the company.

To complete the canal to Covington in three years, and to the Kanawha river in eight years.

To widen and deepen the canal including the locks, between its termini.

To deposit one million dollars as a guaranty of the fulfillment, on its part, of the terms of the agreement, the same to be forfeited to the J. R. and K. Company, in the event of failure.

The Board of Public Works, representing the State, have already given their consent. The private stockholders, however, have yet to decide whether they will exchange about $2,000,000 of unproductive stock, for $1,000,000 of certificates of debt, yielding them a certainty of 5 per cent. for eight years, and promising them a yearly dividend after that period. A general meeting of the stockholders has been called for the 28th August. It is understood, says the *Whig*, that the Emperor, Louis Napoleon, is cognizant of the enterprise, and has given it his imperial approbation.

Chicago, Burlington and Quincy Railroad.

The earnings of this line for the first seven months in 1859 and 1860 were:

	1859.	1860.	Increase.
January	$83,041 01	$111,019 44	$27,978 43
Febr'y	88,854 48	117,856 92	29,002 44
March	114,037 31	161,268 71	47,231 50
April	129,981 77	168,630 33	38,648 56
May	129,149 27	220,532 62	91,383 35
June	124,381 91	148,829 95	21,448 04
July	100,883 61	154,723 41	53,839 80
Total.	$770,329 26	$1,082,861 88	$312,532 12

Length of road, 310 miles.

Freedom Iron Company's Tyres and Axles.

This company, whose cold-blast charcoal furnace is at Greenwood, Huntingdon County, and whose forge, hammers and mill are near Lewistown, in Mifflin County, in this State, are introducing their tyres and axles into favor and a market, in all parts of the United States. By recent improvements they are enabled to fit a tyre upon the wheel, ready for service, without the application of turning tools to the face of the tread, and whereby it is alleged the durability and wear of the tyre is prolonged and a greater economy attained.

Freedom tyres and axles are now in service upon roads in all sections of the country, even in localities where the competition is strongest from English manufacturers. Freedom tyres are in use upon the Camden and Amboy, Central New Jersey, Belvidere Delaware, Hudson River, Harlem, Long Island, and other railroads in the vicinity of New York, into which city the larger proportion of foreign iron is imported.—*U. S. R. R. & Min. Reg.*

Mahanoy and Broad Mountain Railroad Co.

Geo. B. Roberts, Esq., Chief Engineer of this company is in the field with his corps. In reference to this new road, it is well enough to say that it is not deemed *antagonistic* to but independent of the Schuylkill Haven and Mine Hill Railroad, which latter road constitutes an outlet from the Mahanoy at Ashland, whereas the new road will open the coal region and carry from collieries north of that point. The Mine Hill Company's programme, as it is now operated, will not be broken into by the new road, which is intended to facilitate new operations and give coal land proprietors, hitherto shut out from market, an opportunity to open mines upon their mineral acres and make their estates available for practical revenue purposes.—*U. S. R. R. & Mining Reg.*

South Carolina Central Railroad.

The survey of this road was commenced on the 1st of August, at Charlotte, North Carolina, under the general superintendence of that experienced engineer, S. S. Solomons, at present connected with the North-eastern Railroad. The committees in the several districts will be called on as the survey approaches their sections, for such aid as may be necessary.—*Sumter Dispatch.*

Chicago, Alton and St. Louis Railroad.

No road in the West has improved more rapidly in a financial point than the St. Louis, Alton and Chicago, since it passed into the possession of those who at present control it. This fact is shown in the large increase of its earnings over the corresponding time in 1859. We have seen an advance proof of the balance sheet of the Treasurer, from December 2, 1859, up to July 1, 1860, from which we learn that the earnings of the line up to July 1st were $468,107.24, showing an increase of $130,769.12 over the corresponding period in 1859; to this statement we add $83,455.13, for the month of July, showing an aggregate earning of $551,562.37 for eight months. The total increase for the same time was $154,887.81. During this time large amounts have been expended in purchasing new rolling stock, putting down new track, building bridges, &c. And we learn that the company are now employing a large force of hands in making repairs, and that as soon as men and money can do it, the entire line will be put in a most thorough condition throughout.—*Chicago Paper.*

☞ We learn that William Larned, Esq., the New York Director of the Galena and Chicago Railroad, has begun his duties as Financial Superintendent and Treasurer of that road, and will hereafter reside in this city. Mr. Larned is a brother of a well known fellow citizen, E. C. Larned, Esq., and is a gentleman of large experience in financial affairs.—*Chicago Press and Tribune.*

Railroad Earnings.

The revenue of the Baltimore and Ohio Railroad for July was:

MAIN STEM.	
From Passengers	$57,757 30
" Tonnage	252,534 94
" Mails	7,833 34
" Express	3,770 00
	$321,895 58
WASHINGTON BRANCH.	
From Passengers	$32,227 24
" Tonnage	11,293 44
" Mails	1,000 00
	44,520 28
N. W. VIRGINIA BRANCH.	
From Passengers	$2,249 64
" Tonnage	13,505 75
" Mails	866 66
	16,622 05

Summary of Revenue for July, 1859 and 1860.

	1859.	1860.
Main stem	$261,589 62	$321,895 58
Washington Branch	31,784 44	44,520 28
N. W. Virginia Railroad	10,787 19	16,622 05
Totals	$304,161 25	$383,037 91

Showing an net increase of $78,876 66 over July 1859.

The fiscal year of the Company commenced with October. The revenue for the first ten months of the present year compares with that for the same months of the previous year as follows:

	1859-'60.	1858-'9.
October	$416,929 61	$391,395 10
November	431,287 56	380,879 75
December	355,662 13	337,202 25
January	282,070 64	314,201 09
February	332,743 77	303,631 78
March	425,487 08	400,984 68
April	406,428 36	360,751 15
May	435,133 28	391,019 17
June	374,437 59	350,444 16
July	383,037 91	304,161 25
Totals	$3,843 217 93	$3,534,670 38
	3,534,670 38	
Increase present y.	$308,547 55	

Nearly the whole of this increase has been upon the business of the main stem. There is a good prospect that the remaining months of this year will add largely to the increase.

The receipts of the Grand Trunk Railway of Canada, for the week ending August 4, 1860,

were	$57,550 33
Corresponding week, 1859	39,133 74
Increase	$18,416 59
Total traffic from July 1, 1860	$269,929 96
Do. for same period last y	200,042 80
Increase	$69,887 16

The July earnings of the Macon and Western Railroad Company were:

Passenger Transportation	$14,709 84
Freight "	10,823 39
Mail "	866 45
Total	$26,399 18
July, 1859	25,661 41
Increase	$786 77

The earnings of the Pittsburg, Fort Wayne and Chicago Railroad for July, 1860, compared with the same period of last year were:

	1860.	1859.
From Freight	$78,118 00	$56,931 23
" Passengers	56,018 93	54 361 29
" Express	2,600 00	3,250 00
" Mails	7,825 00	7,825 00
" Rent of road	7,083 33	5,500 00
" Rents and Miscel.	883 75	314 91
Total	$152,529 01	$128,182 43
Increase		$24,346 58
Total from Jan. 1st, to July 31st, 1860	$1,174,615 52	$958,871 86
Increase		$215,743 66

The earnings and expenses of the Cleveland and Mahoning Railroad Company in July were as follows:

	1859.	1860.
Passengers	$4,521 01	$4,870 63
Freight	9,116 56	11,031 51
Coal	8,591 82	17,929 71
Mails, etc.	262 60	418 75
Gross earnings	$22,491 89	$34,250 60
Expenses	8,056 13	11,709 95
Net earnings	$14,434 76	$22,540 65

The earnings of the Cleveland, Columbus and Cincinnati Railroad for July show a fair gain. The figures are:

July, 1860	$94,673 42
July, 1859	76,758 59
Increase	$17,915 83

The following is a comparative statement of earnings and expenses of the Buffalo and State Line Railroad Company for the month of July, 1859 and 1860:

	1859.	1860.
EARNINGS.		
Passengers	$25,531 43	$31,014 75
Freight	21,986 46	25,899 97
Other sources	1,538 50	1,402 00
Total	$49,056 39	$58,316 72
Increase		$9,260 33
EXPENSES.		
Construction	$275 00	
Maintaining road	15,889 35	$16,804 77

Operating	14,082 88	11,736 27
Total	$33,787 87	$35,288 25
Increase		$1,500 38

$1,371 paid for taxes included in the above; same was paid last year in August.

The following is a comparative statement of the business of the North Pennsylvania Railroad Company:

Earnings in July, 1860	$30,694 51
Do. July, 1859	26,406 58
Increase	$4,287 93
In first eight month of fiscal year	$246,958 04
Same months last year	214,027 12
Increase	$32,930 93

The earnings of the Housatonic Railroad for July were:

	1859.	1860.
Freights	$13,302 64	$14 809 44
Passengers	10,435 83	12,589 85
Total	$23,738 47	$27,399 29
Total receipts, July, 1860		$28,831 46
" " " 1859		24,670 63
Total gain		$3,660 83

The following is the Illinois Central Railroad Company's statement for July, 1860:

Land Department.

2,421 76 acres sold for	$36,751 72
19,170 58 " " since Jan. 1	301,837 65
1,237,260 55 " " previously	15,735,837 02
1,256,431 13 " " Total	$16,037,724 67
Bonds canceled in July	$31,500 00
" " previously	1,689,500 00
Total bonds canceled	$1,721,000 00
Cash receipts in July, 1860	$54,383 54
Total cash and bonds received to July 31, 1860	$3,634,289 71

Traffic Department.

Total receipts for July, 1860	$196,188 48
Do. do. 1859	138,907 06
Increase	$57,281 42
Total receipts since Jan. 1, 1860	$1,370,697 36
Do. correspond'g period,'59	996,332 57
Increase	$374,364 79

The traffic of the Great Western Railway of Canada for the week ending August 10, 1860, was as follows:

Passengers	$17,699 77
Freight and live stock	11,616 72
Mails and sundries	1,311 38
Total	$30,618 87
Corresponding week last year	28,734 57
Increase	$1,884 29

The earnings of the Erie Railroad for the month of July were:

1860	$361,818 65
1859	319,954 73
Increase in 1860	$41,863 92

The receipts of the Michigan Central Railroad for July, 1860, were | $128,383 28
July, 1859 | 108,303 94
Increase | $20,079 34

The earnings of the Indianapolis and Cincinnati Railroad for July, were $29,605, being an increase over the same month last year of $4,392. Of this increase, 1,652 belonged to the passenger department, and $2,740 to the freight. The express and mail receipts were about the same as last year.

The earnings of the Dayton and Michigan Railroad for July were:

Freight	$17,854 54
Passengers	12,553 15
Mails and express	2,380 00
Total	$32,787 69

These figures show a falling off in the traffic of the road, as compared with the previous month, of $1,690 79, while the month of June exhibited an increase over May of $2,250 17. The difference in the freight receipts between June and July, amounted to $3,083 13, in favor of the former month. The passenger earnings were about the same, while the mail and express increased $894 02.

The earnings of the New York and New Haven Railroad Company for July, 1860, were as follows:

Passengers	$75,258 06
Freight	11,250 00
Total	$86,508 06
July, 1859	80,228 43
Gain in July, 1860	$6,279 63

The following is a statement of the earnings of the New York Central Railroad for July, 1860, compared with its earnings for the corresponding month of the previous year:

July, 1860	$549,174 36
July, 1859	504,217 40
Increase	$44,956 96

The following are the earnings of the Great Western Railway of Canada for the week ending August 3, 1860:

Passengers	$17,000 51
Freight and live stock	10,227 13
Mails and sundries	1,397 60
Total	$28,625 24
Corresponding week of last year	31,674 27
Decrease	$3,049 03

Cincinnati Stock Sales.

BY KIRK & CHEEVER.

Mobile and Ohio Railroad.

The last bar of iron for the completion of this road has been received in Mobile. All the iron necessary for the work is now on hand. Cars of all kinds, and steam engines, etc., are on their way to the same port to stock the road completely by the first of November.

Memphis Branch Railroad.

We learn from the Clarksville (Tenn.) *Jeffersonian* that the cars from that place have commenced making regular trips over the Memphis Branch of the Louisville and Nashville road as far as Allensville, a point eighty miles from the Tennessee line. The first regular trips were made on Wednesday of last week, on which day Mr. Faxon went over the road as far as the Allensville Station, and found it in excellent condition, and one of the best built roads he had ever seen. The track, although entirely new, is remarkably smooth, and as straight as a bird could fly. The grades are light, and will doubtless prove one of the best and most comfortable roads in the country. The track is already completed eleven miles from the State line, and it is expected that the cars will be run up twelve miles within a very few days, making a continuous road of twenty-seven miles from Clarksville. The gentlemen who have charge of the track-laying are performing their work with great care and fidelity, and pressing forward with energy. The iron bridge over the Elk Fork is an unique and beautiful structure and a very substantial one. A similar one will be put in at the Whipporwill. It is already on the ground and will be up in a very short time. But a few weeks will now elapse before the cars will be dashing into Russelville and Bowling Green. The present expectation is to run them through before the 20 of September. The same paper states that the track on the trestle work over the Cumberland river, opposite Clarksville, was finished last Thursday, and the track-laying towards Palmyra will be commenced immediately.—*Cin. Com. Aug.* 11.

A Magnificent Street in New Orleans.

A New Orleans correspondent of the Charleston *Mercury* writes as follows: "The improvements on Canal street are still continuing, and when finished it will be the most magnificent street in the United States, if not in the world—being eight miles in length, extending from the Mississippi river to Lake Ponchartrain, and nearly two hundred feet wide, with a parterre promenade in the centre of forty feet in width. At all the grand crossings monuments or fountains are to be erected. Already Clay's monument stands at the junction of St. Charles and Canal, and it is now proposed to erect a splendid monument to Fulton, to be placed at the head of the street, fronting the Mississippi. The design, I learn, has already been made and accepted by the city. This street is our great promenade, and the fashionable side is crowded every evening."

Androscoggin Railroad.

The adjourned meeting of holders of the third mortgage bonds of this road was held in our city yesterday. John Rand moved that it was expedient to direct the Trustees to take possession of the road. Mr. Holland, of Lewiston, offered as an amendment the following: That the bondholders suspend instructing the Trustees to take possession of the Androscoggin Railroad, provided the Directors shall within thirty days pass at a regular meeting of their Board these votes, viz:

1st. To continue in office the present Superintendent, S. W. Eaton.

2d. That the earnings of the road shall be applied first to pay the running expenses—second, to all necessary repairs and liens upon the depot building upon said road, and toward the payment of the claim for iron on the road from Wilton to Farmington, for which said iron is pledged.

This amendment was adopted, and the meeting adjourned. The street talk is that the action of this meeting will facilitate the construction of the road to Bath.—*Portland Advertiser, 4th.*

Attleborough Railroad.

The friends of the proposed railroad from the Delaware river to Attleboro' and Newtown, Bucks County, Pa., met at Attleboro' on the 14th ult. The Committee on Survey made report of the lengths of the different routes surveyed, as follows: From Eddington to Newtown, via Neshaminy, 15 miles; from Bristol to Newtown, via Attleboro', 10½ miles; from Bristol to Newtown, via Flowers' Mill, 10¼ miles; from Bristol to Newtown, via Galloway's Ford and middle route, 11¼ miles; by the branch route from Attleboro' to Flowers' Mill route, 11¾ miles.

The Chesapeake and Ohio Canal and the Baltimore and Ohio Railroad.

We learn that the Commissioners of Public Works of this State have just made a tour of inspection over the line of the Baltimore and Ohio Railroad, taking occasion at the same time to visit in part the line of the Chesapeake and Ohio Canal, and especially dam No. 4, the injury to which by freshets, some time ago, had seriously incommoded navigation. The following is the result of their observation of the two works, as furnished us for publication:

The Commissioners are much gratified to find the railroad in complete working order, and are satisfied that the officers of this road in the different departments, from the President down, are of the best in the country.

Canal dam No. 4 is now under contract with Wm. Brown, Esq., who is pushing the work to completion, having about two hundred men employed day and night laying stone, backing up wall, filling guard bank, &c., and will certainly have the whole work completed by the 15th of September, 1860, at which time the President and Directors can insure navigation, when they contemplate advancing the freight on coal twenty-five cents per ton from Cumberland to tide-water.—*Baltimore Sun, August 2.*

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"

American Railroad Journal.

Saturday, August 18, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Philadelphia and Baltimore Central R. R.

An adjourned meeting of the stockholders of this company was held at Avondale, the present southern terminus of the road, on the 4th inst. The committee appointed at the previous meeting, to raise funds for the completion of the road by the sale of the bonds of the company, reported that it was inexpedient to push the matter further; that owing to the company's adverse circumstances, public confidence had been much impaired, etc., etc. The committee were then discharged. The proposition of Messrs. S. M. Felton and associates was then presented, viz: to furnish $180,000, taking therefor the bonds of the company to the amount of $300,000, at 60 per cent.; to apply $155,000 of the proceeds towards paying the debts of the company and completing the road, and $25,000 toward the purchase of rolling stock; and to take a lease of the road for 20 years, with the privilege of renewal for 20 years more. The proposing parties do not agree to extend the road, but only to take that portion which the company build and operate it. All the money is to be expended east of the Susquehanna, and the total amount of bonds in completing the road to Oxford

not to exceed $700,000. The whole net earning to be liable for the interest on the bonds, and the balance to be equally divided. After considerable discussion, the following resolution was adopted:

Resolved, That the President and Directors of the Philadelphia and Baltimore Central Railroad Company, be authorized to lease the road within twenty days from this time, and that they give a preference to a satisfactory party offering for the same along the line; but if no such satisfactory proposition is made from such a company, then the lease be made to Mr. S. M. Felton and his associates, unless a subscription along the line of the road of a sufficient amount of the bonds to carry on the road under its present direction; and that whatever proposition or lease they shall determine upon, shall be submitted to the stockholders for confirmation or rejection within five days after the expiration of the time before mentioned, and no lease shall be binding unless ratified by the stockholders.

The company has a debt of $140,000; $7,000 of a floating debt, and a protested note of $3,000—all this must be provided for, or the property be sold, and the stock wiped out. A considerable amount is also required to equip and operate the road.

Norris' Duplex Radial Truck.

We have received a pamphlet containing a drawing and description of *Septimus Norris' Patent Guide Wheel Truck for Locomotives*, patented April 24th, 1860.

Mr. Norris says: "The nature of my invention consists in a new mode of applying a single pair of guide wheels to a locomotive, by which the locomotive is enabled to pass or traverse through curves of short radius, relieving the flanges of the driving wheels of friction and impingement against the inner sides of the rail."

What he claims as his invention and wishes to secure by Letters Patent is: 1. The application of two radial bars jointed to the frame of the guide wheels, and working with four centres. 2. The compound curved block in connection with the roller for supporting and guiding the wheels through curves, at the same time holding them rigid on a straight line of rail.

Chicago, Alton and St. Louis Railroad.

The following is the general balance sheet of this company embracing the period from December 3d, 1859, to June 30th, 1860:

	Dr.
Earnings	$468,107 24
Loan to receivers	232,772 50
Bills payable	42,323 62
Wages due for June and part of May,	52,110 21
Stores purchased in June unpaid	12,461 75
Sundry accounts of debit balances	48,011 32
Total	$855,786 64
	Cr.
Operating expenses	$384,983 91
New rolling stock, iron, ties and stations	109,681 77
Paid Joel A. Matteson to give up possession of the road	61,530 12
Paid wages left unpaid by J. A. Matteson	185,319 87
Cash on hand this day	32,099 70
Due from Post office and stations	34,016 82
Bills receivable	2,379 03
Sundry accounts and credit balances.	16,782 79
Expenses of obtaining possession of the road	8,702 12
Stores on hand at Bloomington	20,291 01
Total	$855,776 64

Frictionless Boxes.

One of our City Railroad Companies have had in use for some time on one of their cars, a style of axle-box, recently invented, which requires no oil or other lubricating material, and which is sensibly easier to run than any of the cars with ordinary boxes. The load is carried on anti-friction rollers. The boxes require to be a little larger than usual, the entire width between the jaws of the pedestals being about six inches—but this involves no serious disadvantage while the great economy due to any considerable reduction of the draught of a car without the use of any oil or grease must be obvious at a glance.

The novelty in this box may be described as consisting in an ingenious duplication of the anti friction apparatus, whereby, it is claimed, the friction is reduced beyond anything before attained in anti-friction boxes, and the liability to derange ment greatly diminished. Boxes on this principle, less perfectly carried out, have failed from the destruction of the parts which support and guide the rollers. In the new box these parts are so arranged as to be absolutely without friction at any point and consequently without wear.

There is a series of hollow rollers, on which the journal rests—the rollers being kept in their positions by their internal surfaces resting upon another series of smaller rollers, revolving round an independent journal. By this simple, and apparently perfect arrangement, friction is so effectually overcome, as to be too insignificant to be estimated. A day or two since, we had the pleasure of witnessing results on some models, which, without understanding the principles of this invention, would have been truly astonishing, and also saw two journal boxes that had just been taken off the car for the purpose of showing their practical wear. These, by an estimate had run about 1,000 miles. The rollers were a little burnished, but not worn; and the inner bearing surface of the box, which had been chilled, had scarcely the appearance of use.

We were scarcely prepared to find such an extremely simple arrangement accomplishing that which might be regarded almost beyond the reach of the possible. But notwithstanding our former incredulity, we are now convinced that with this arrangement all appreciable friction on journals can be obviated, and, as a consequence, lubrication despensed with. That this is a very important achievement all will admit. In fact to even secure an improvement on the old oil boxes would be no small advantage; but when it is found possible that all friction in journals, and all necessity for lubrication can be obviated, the mind almost staggers at the great innovation—its importance—and is necessarily incredulous, especially when centuries of mechanical experience have led us to regard as indespensable the annoying and filthy practice of lubricating machinery to obviate friction. But the facts have been demonstrated by the most satisfactory and practical results, and are therefore no long questionable. Persons interested in the construction of machinery would undoubtedly be much interested in calling at the office of the agent 473 Broadway, and seeing for themselves.

Connellsville Railroad.

The extension of this road from Turtle Creek to Pittsburg is rapidly progressing, and it is expected that the cars will be running over it by next Christmas.

Interest on Stocks, Bonds, etc.

The bonds of the Michigan Central Railroad Company due next October, with accrued interest, will be paid on presentation at the office of the company.

The Delaware Division Canal Company have declared a dividend of two dollars a share out of the earnings of the past six month.

The Mine Hill and Schuylkill Haven Railroad Company have declared a semi-annual dividend of 6 per cent., equal to three dollars per share.

The Naugatuck Railroad Company have declared a semi-annual dividend of 4 per cent., payable on and after the 15th inst.

A dividend of 4 per cent. on the capital stock of the Peoria and Bureau Valley Railroad Company has been declared, payable at the office of the company, No. 13 William street.

Insurance Dividends.

The Home Insurance Company has declared a dividend of 6 per cent., payable on demand. The Stuyvesant Insurance Company a dividend of 6 per cent., payable on the 15th inst. The Security Fire Insurance Company a semi-annual dividend of 4½ per cent. on the capital stock, payable in cash on demand. Also, a dividend to policy holders of 27 per cent. on the earned premiums, for which scrip will be issued on the 1st of October next.

A Grand Land Project.

We notice that steps are in progress for the organization of a company in London with a capital of £500,000 sterling, (over $2,500,000,) to be devoted to the purchase and settlement of lands in Illinois. The "Prairie Land Emigration Company" state that a conditional purchase has been made of 250,000 acres of prairie land from the Illinois Central Railroad Company, "that when the sale is completed, the company will not be in any way connected with the Illinois Central Railroad, or its affairs, but will hold the land by a direct tenure in freehold." The scheme is said to be similar to that of the Canada Land Company, which was started in London some years since, and which has successfully established a large population upon its lands, and proved an extremely profitable operation to its shareholders.

Freehold and Jamesburg Agricultural R. R.

The annual meeting of the stockholders of this company was held at Jamesburg, N. J., on the 30th ult. After the organization of the meeting, the several reports were read, exhibiting the affairs of the company, which appeared to be in a very flourishing condition. An election was then had for Directors for the ensuing year, which resulted in the choice of the following gentlemen:

Edwin A. Stevens, Robert F. Stockton, John R. Thomson, Richard Stockton, William D. Davis, Joseph Combs, Daniel H. Ellis, Aaron Gulick, Jas. Buckelew.

From the report of the Superintendent, Col. Isaac S. Buckelew, we make the following summary of the operations of the company for the past year:

Gross Earnings	$41,980 38
Current Expenses	21,710 60
Net Earnings	$20,296 78
Whole number passengers carried	58,088½
do. tons of freight	30,767½

In the freight was included 891,118 bushels of Marl.

The Directors declared a dividend of four per cent. for the past six months on the entire cost of the road and equipments. It will be remembered that this company paid off the last dollar of its indebtedness on the first of January last.

The subject of extending the road to Dean's Pond and to the Squankum marl pits was discussed. No action was taken, but there appeared to be a general feeling in favor of the extension. In the course of their remarks one or two of the speakers passed well deserved compliments on Col. Buckelew, the Superintendent, for the admirable manner in which he has managed the affairs of the company.

Georgia Western Railroad.

The Georgia Western Railroad Company, extending from Atlanta, Ga., to Jacksonville, Ala., a distance of 90 miles, has been organized by the appointment of R. PETERS, Esq., President; Hon. John P. King a Director, and L. P. Grant, Esq., Chief Engineer.

With the above-named experienced officers, and the determination of the company to build the road, strictly on the cash system, we may with confidence rely on another dividend paying road being soon added to the railroad system of Georgia.

Milford (Mass.) and Woonsocket R. I.) R. R.

At a recent meeting of gentlmen interested in this road, the following board of directors was chosen: Aaron Claflin, A. C. Mayhew, O. Underwood, W. W. Dutcher, Earl P. Mason of Providence, R. I. We understand, from the Milford *Journal*, that all but $5,000 of the stock has been taken, and everything looks favorable to the success of the enterprise.

Pennsylvania Coal Company.

The annual report of this company for the fiscal year ending May 1, 1860, has been issued. From this we learn that the quantity of coal brought to market during the year was 688,854 tons, or 58,798 tons more than during the preceding year. The net profits of the business amounted to $271,676 83, or about 8½ per cent. on the capital stock; out of which two semi-annual dividends, of 3½ per cent. each, have been declared. The business of the present season is progressing favorably; the competition for sales, however, continues to be active, but at slightly increased rates. The receipts for the year have been as follows:

From sales of coal		$2,298,096 96
From transportation over company's road, profit on barges, etc.		47,576 74
Coal on hand May 1, 1860		261,737 00
		$2,607,410 70

Against which is the following:

Coal on hand per last report, and cost of coal mined in 1859, etc.	$789,543 97	
Road expenses	363,021 71	
Canal freight	660,232 47	
Tolls paid Delaware and Hudson Canal Co.	257,340 93	
Port Ewen expenses	41,079 06	
State tax	11,200 00	
Interest on $600,000 mortgage bonds	42,000 00	
Salaries, current expenses, etc., N. Y. office.	29,989 47	
Coal yard and harbor expenses, rents, depreciation of tools, etc.	141,326 26	
		2,335,733 89
Balance		$271,676 83

GENERAL STATEMENT.

		Dr.
Capital stock		$3,200,000 00
Seven per cent. mortgage bonds		600,000 00
Bonds and mortgages payable		121,135 77
Bills and accounts payable, etc.		101,734 68
Balance made up as follows:		
Balance per last report,	$443,335 93	
Earnings 1859, per statement	271,676 83	
	$715,012 76	
Dividend paid Aug. 16, 1859	$112,000	
Dividend paid Feb. 16, 1860,	112,000

Total		$4,493,883 21

Norwich and Worcester Railroad.

The earnings of this company for the year ending June 1, 1860, were | $353,898 26
Expenses for the year to June 1, 1860 | 211,485 37
Balance | $142,412 89
Interest for the year to June 1, 1860. | 41,239 81
Net for the year | $101,173 08

The liabilities of the company August 1, 1860, were as follows:

Massachusetts Loan, which is being reduced $10,000 per annum, due in 1877, at 6 per cent.		$400,000 00
Less sinking fund applicable to same and securely invested		55,000 00
		$345,000 00
Bonds due in 1860 at 6 per cent.		16,300 00
Bonds due in 1864 and 1874 at 7 per cent.		100,000 00
Norwich S. Society, $5,000 to be paid annually at 6 per cent.		95,000 00
Total		$556,300 00
Notes and balances due to the company	$65,206 27	
Notes and balances due by the company	54,317 12	
		10,889 15
Total		$545,410 85

The business of the road is increasing, as will appear from the earnings of the past year, compared with former reports of earnings. There are now building on the line of the road (with mills that were completed a few months since), an amount equal to 1,800 looms of cotton machinery. In view of this additional machinery on the line of the road, with the impulse given by having a line of new boats (to through travel), the company expect a large increase of business.

The road is at present in a good condition. There have been added within the last three years, new buildings in addition to what were then on the road, amounting to upward of $16,000. There has during the same time been 35 miles of the road laid with new rails, and 2½ miles of additional side track. The rolling stock has been increased by the addition of 152 cars, three locomotives to take the place of old ones, and four rebuilt. The inventory of the rolling stock and motive power is upward of $60,000 more than June 1, 1857. All of this outlay has been charged to expenses.

The company, after a very careful examination, have decided to invest $200,000 in the stock of a line of new boats, to run in connection with this road, which they deem essential to the future success and prosperity of the road.

Chicago and Northwestern Railroad.

At a meeting of the bondholders of this company, held in this city on the 11th inst., it was voted unanimously to authorize the company to carry out the proposed arrangements for extending the road from Oshkosh, its present terminus, to Appleton, a distance of 23 miles. The entire cost of the extension will not exceed $10,000 per mile, and the citizens of Appleton contribute a portion of the sum, taking stock in payment. The business from the section of country to be opened by this extension will be an important acquisition for the Northwestern road, sufficient to pay at least three times the interest on the amount expended in its construction. Mr. W. B. Ogden, President of the C. & N. W. made some interesting statements in relation to the business prospects of the line. Wheat in that section of the country would yield in some instances 35 to 40 bushels to the acre, and is of very superior quality. Field hands are now getting $2.50 per day, and even at that labor is scarce enough to render it difficult to harvest the immense crop as rapidly as desired. In order to do the business of the road this autumn, the company will be obliged to run freight trains by night, loading and unloading by day. The equipment has been doubled, but even now will scarcely suffice to do the business close at hand. Mr. Ogden pronounced the statement that the road had been carrying freight without profit, to be a sheer fabrication.

Vicksburg, Shreveport and Texas Railroad.

We understand the iron has been laid to Delhi on this road, and that the track-laying and bridging on the unfinished section, thence to Monroe, is progressing as rapidly as the scarcity of hands at this season will permit. The financial affairs are in a healthy condition and well managed.—*Vicksburg Whig, 31st ult.*

Eastern Texas Railroad.

The organization of this company took place at Woodville, Tyler County, Texas, on the 18th ult. The following Directory was chosen:

For Rusk County, Wiley Harris, Allen Birdwell and W. W. Morris. For Nacogdoches County, H. H. Edwards and James R. Arno'd; for Tyler County, R. R. Neyland; for Jefferson County, Chas. H. Alexander, and Samuel H. Witmer and Geo. W. Cochran, residents of Cincinnati, Ohio.

The following officers were elected by the Board of Directors:

H. H. Edwards, President; W. W. Morris, Vice

President; J. H. Muckelroy, Treasurer; John Forbes, Secretary; Sam. H. Witmer, General Superintendent; Benjamin F. Marsh, Chief Engineer.

RAILROAD IRON AND SPIKES.

500 tons 58 lbs. Rails of superior quality.
1,000 tons 54 lbs. do. do.

Anti-Friction Journal Box.

All necessity for Lubrication dispensed with.

PRATT'S UNIVERSAL ROLLING JOURNAL BOX, invaluable for Railroad Car, Wagon and Omnibus Axles, Rolling Mills, Water Wheels, Steamboat Shafts and other journals of all machinery. Combining simplicity, economy and great durability. Weight does not increase friction. Has been fully and practically tested and needs only to be seen in operation to meet with an immediate and an unqualified approbation. Conceded to achieve the most wonderful and important development in the economy of motive power, that has been introduced during the last half century. Call and be convinced by practical and unequivocal demonstration.

W. J. DEMOREST,
473 Broadway.

LEWIS E. P. SMITH & CO.,
Copper and Iron Merchants,

397 and 399 Water st., NEW YORK,

DEALERS in Heavy Cut Boiler and Bolt Copper, Spelter, Tin, Lead, Composition, Yellow Metal, Antimony Wrought and Cast Scrap Iron.

WILLIAM H. BERRYMAN,
Commission Iron Merchant,

No. 38 HARRISON STREET,
And 335, 337 & 339 Washington St.,
NEW YORK.

DEALER IN BOILER PLATE AND RIVETS.
TANK, ANGLE AND BAR IRON,
SMOKE PIPE, BOILER TUBES, ETC.

PROTECTION AGAINST THIEVES.
THE PATENT PREMIUM INSURANCE DOOR BOLTS,

PECULIARLY adapted to all doors where safety is required. are unequalled for strength, and pronounced by judges **BURGLAR-PROOF.** This is not the Door Fastener carried in the pocket. Manufactured by

HENRY BURT,
No. 11 Newton st., Newark, N. J.

For sale at Clough's Yankee Notion Depot (231 Pearl st.). **New York,** and by the trade generally.

MOSES BIGELOW. MOSES BIGELOW, JR.
MOSES BIGELOW & CO.,

MANUFACTURERS OF ALL KINDS OF
COPAL VARNISHES,

At 310 & 312 Mulberry st.,
Adjoining the Chestnut st. Depot.
NEWARK, N. J.,

HAVING constantly on hand a very large stock of superior **VARNISHES,** would respectfully give notice to buyers that they can at all times, be supplied with the best goods in their line, on the most favorable terms, and at the shortest possible no tice.

The attention of **RAILROAD COMPANIES** and **CARRIAGE MANUFACTURERS** is especially invited to their ELASTIC or FINISHING, WEARING BODY and LIGHT CARRIAGE VARNISH, which, for free working brilliancy of lustre and fine wearing qualities, are unsurpassed by any manufactured in the Union.

Cabinet, Piano, and other Manufacturers
IN WOOD, TIN AND IRON,

can be supplied with QUICK-DRYING VARNISH of superior quality, thoroughly adapted to their various uses.

DRUGGISTS and **DEALERS** in the article may rely upon goods adapted to their trade, and will be dealt with in the most liberal manner.

☞ Goods delivered and shipped in NEW YORK **FREE OF CHARGE.**

PORTER'S IMPROVED CENTRIFUGAL GOVERNOR.

THE ATTENTION OF PARTIES TROUBLED WITH IRREGULAR OR UNsteady power, is respectfully called to this Governor now coming into general use.

It may be used in connection with any valve or cut-off, and will regulate the motion of the engine so perfectly, that its entire load may be thrown on or off at once without sensibly affecting its speed.

I will send a Governor to any responsible person for trial, and if its action be not perfect under the above test it may be returned.

☞ **Prices exceedingly moderate.** ☜

All orders and communications will receive prompt attention. Send for a circular.

Address **CHARLES T. PORTER, Patentee and Manufacturer,**
235 West 13th St., NEW YORK CITY.

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.

Sent, **free by mail,** in separate sheets, at **25c.** each; or the whole, handsomely bound in cloth, in one volume, for **$7.50.**

ENGINEER'S FIELD BOOK,
By **C. S. CROSS, Civil Engineer.**

THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—

1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.

It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, **free by mail,** upon receipt of the price. For sale at this office. Price **$1.**

SUPERIOR CAR BOX OIL,
At 25 per cent. below the cheapest Lubricating Agent in use.

THE Oil is chemically pure; is entirely free from Gum and Acid; and at thirty-eight degrees below freezing point retains its perfect limpidity.
LOSEE & BOGERT, Agents.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be superior for Burning, and TWENTY-FIVE per cent. more durable than Sperm Oil, for Lubricating, and the only Oil that is in all cases reliable, that will keep bearings cool, and
WILL NOT GUM.
In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it superior to any other for Lubricating.—For sale ONLY by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851,
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855,
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.
In recommending it to their patrons, TIFFANY & CO., after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.
THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.
WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength. For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.
The above CEMENT is used in most of the fortifications building by government. 45

HUDSON RIVER CEMENT COMPANY.
THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.
This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**
It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York); **at all seasons** of the year, thus avoiding all unnecessary handling.
The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dus'; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.
Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**
N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.
THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing,
JOHN H. STEPHENS, President, Newark, N. J., or
HENRY WILDE, Secretary, 90 Wall st., N. Y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.
THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.
M. W. WOODWARD, Secretary.

Street Railways for England.

An Address delivered before the British Association at Oxford, England. By GEORGE FRANCIS TRAIN, ESQ., *of Boston.*

(*Section G—Mechanical Science.*)

The age of omnibuses in crowded cities has passed. The age of horse railways has commenced.

America has introduced the new invention of relieving crowded streets, by giving additional facilities for travel; and Europe must, sooner or later, adopt a similar system. While on a recent visit to the United States, I was surprised to find the progress made in what the Americans term *Horse Railways*, the English *tramways*, and the French *chemin de fer Americain*. In the cities of Boston, New York, Philadelphia, Baltimore, St. Louis, and Cincinnati, the railway cars were displacing omnibuses in all the large streets. Like all practical labor-saving inventions, the people first oppose then advocate them. They have already become a public utility; and Americans would miss their railway car as much as the English would their penny-postage system. The horse railway is a fixed fact. It has had a fair trial, and has met with striking success.

The horse railway is creating, and will continue to create, the same revolution in large cities that the telegraph on the land, and the electric cable under the ocean has done in commerce.

As the locomotive supersedes the stage coach on the shore, and the steamboat displaces the sailing on the sea, so will horse railways make omnibuses give way to the force of progress.

The railway from Liverpool to Manchester, in your recollection, astonished the world. Now there are seventy thousand miles! Brunel's genius progressed from the Great Western of 2,000 tons to the Great Eastern of 20,000 tons in twenty years! Now a thousand steamboats connect the mother land with her colonial children, as the arteries carry life from the heart.

England, first in iron railing the country with steam, is last in iron railing the city with horse power. But the enterprise that stimulated the Thames Tunnel, the Tubular Bridge, the Crystal Palace, and Great Eastern, will not long submit to the miserable steam packets from England to France, ferry boats from Liverpool to Birkenhead, or to omnibuses blockading the leading city thoroughfares. The latter enterprises, I am confident, on the improved system, would prove as great financial successes as the former have financial failures.

Although the Americans have seized the idea, and are practically demonstrating it, by introducing Horse Railways into all their large cities as if it was a modern invention, I find that there is nothing new after all in the system, except its application for passengers. A century ago tramways were used in England.

Cæsars military roads from hill to hill still mark the Roman's track. First, pack horses transported the products of the land from place to place. Even a hundred years ago this was the custom in Scotland; in fact, in some places in the Highlands, and in some of the hilly parts of Wales, it is the practice of to-day. Wooden sledges drawn by horses succeeded. Then wheel carriages—afterwards wooden tramways—and last came what the Egyptians used in the age of the pyramids, and the Chinese during the Christian era, canals; the first in England was made in 1756. The Asiatic practice of laying down timber in bad roads most likely introduced the wooden rail. Down to the Elizabethian age, coals from Newcastle were taken in carts or on panniers to the sea. Wooden railways were introduced previous to 1649.

Two tons were a good load for one horse on the wooden rail; this is now about the weight of the passenger car. In 1738 cast iron rails succeeded wood. In 1752 iron wheels were made, but the carriages were not linked together till 1763. Six tons of rails were made by the Colebrook Dale Company for their tramway on the 13th of November of that year, and the Ebbw Vale Company, nearly a century after, are rolling their first 800 tons of street rails for the Birkenhead Street Railway. In 1805 malleable rails were made at Wallbottle Colliery, Newcastle-upon-Tyne. After horse power came steam.

Savery reduced to practice in 1663 the Marquis of Worcester's suggestion in the "Century of Inventions." Newcomen made improvements in 1707. The cylinder and piston high pressure engine came in 1720. These engines were used to pump water, but Dr. Robertson suggested to Watt, in 1759, the idea of making steam move wheel carriages. The Surrey Iron Railway Company, in 1801, was the first Railway Act passed in the kingdom. In the year that Wellington and Napoleon were born, 1769, Hornblower introduced his patent. In 1782 Murdock made his model engine. Trevithick and Vivian, in 1802, reduced theory to practice, and obtained a patent for propelling by steam. The first trial was on common roads. Thousands saw the experiment where the Euston-square Station now stands. Woolf made improvements in 1804, but George Stephenson, just before the battle of Waterloo, invented the steam blast, which was the life-blood of the steam engine. Five hundred pounds premium was offered in April, 1829, by the Directors of the London and Manchester Railroad, for the best locomotive engine, to draw three times its own weight over a level plain 10 miles an hour—weight not to exceed six tons, to cost not over £550. October 6, 1829, was the first trial day, and imagine the sensation produced by the engine running 28 miles an hour! The last day of that year the first railway in England was opened for passengers. On the 4th of December, 1830, Stephenson's engine, "The Planet," took 135 bales of cotton to Manchester. Thirty years later there were 10,000 miles in England, and in America 5,000 miles more of railway in active operation than is necessary to circumnavigate the globe! This rapid glance from Roman days to our time gives each stepping stone from pack-horses to locomotives.

The following are the advantages of the Street Railway:

1. Each railway car displaces two omnibuses and four horses, thus relieving the street of one of the main causes of the oft recurring lock-ups.

2. The wear and tear from these omnibuses being transferred to the rail, as well as that of many other vehicles that prefer the smooth surface of the iron to the uneven stone pavement, the ratepayers save a large per centage in taxes.

3. The Gas and Water Commissioners are not inconvenienced when making repairs, as the rails are laid on longitudinal sleepers which can be diverted in case of need; and as these cars, as well as the carts and carriages that take the rail, move on a direct line, it is a self-constituted police system, saving confusion without expense to the public.

4. The cars move one-third faster than the omnibus, and so gentle is the motion that the passenger can read his journal without difficulty.

5. The rails are so constructed that no incon-

venience arises at crossings from wrenching off carriage wheels, and as the improved rail is nearly flat, even with the surface, and some five inches wide, no grooves impede the general traffic, and the gauge admits all vehicles that prefer the track to the pavement.

6. The facility of getting in and out at each end of the car and on each side, giving the passengers the choice of four places, together with the almost instantaneous stoppage by means of the patent brake, permits passengers to step in or out when in motion without danger, instanced by the fact that nearly seventy millions of passengers passed over the New York, Boston, and Philadelphia roads last year, with only twelve accidents. Seventy millions! being more than the population of the United States and Canada, Great Britain and Australia—one-half the entire number of passengers carried on the railways of the United Kingdom the same year; or, to make it more striking, six times the number carried in Scotland, and eight times as many as passed over all the Irish railways, and yet only twelve persons met with any accident.

7. In case of necessity, troops can be transport-from one part of the city to the other at ten miles an hour.

8. It is a special boon to the working man who, often in America, saves threepence beer-money to buy a ticket from his work in the city to his cottage in the suburbs.

In short, the Horse Railway is as much a necessity as gas, sewerage, the steam rail, or the electric telegraph, and I challenge any one to refute the arguments in its favor herein advanced. Once introduced, you would miss the passenger car as much as any great public benefit.

The advantages of this system are, that you ride in less time—with less confusion—less noise—less fear of accident—less mud and dust, and with the additional luxury of more regularity—more attention—more comfort—more room—better light—better ventilation, and with a greater facility of ingress and egress.

Birkenhead will have the credit of introducing the first Street Railway on this side of the Atlantic. My application was made in March, and on the 22d of May the Commissioners affixed the seal to the contract, as arranged with my solicitors, Messrs. Fletcher and Hull; the Ebbw Vale Company have agreed to deliver the iron in July; Messrs. Crowe and Williams are preparing the timber; Mr. R. Main is at work on the carriages, to be ready in August; Mr. Charles Burn, the contractor, will break ground the moment the material is at hand, under the engineership of Mr. Samuel, of London, and Mr. Palles, of Philadelphia, the resident engineer; and, in September, Mr. R. Peniston, the Secretary of the "Birkenhead Street Railway Company (Limited)," will issue excursion tickets from Liverpool to Birkenhead Park and back for sixpence.

The adoption of Street Railways in Europe is an important event in the history of this iron age. Great success cannot be earned without great labor. "The three P.'s—Perseverance, Patience, and Pluck"—is the annual toast of a Liverpool broker, at the customary dinner to his clerks. Success in Birkenhead is success in all the cities in Europe. Experiments are expensive, but this is scarcely an experiment. The system has succeeded in America: why should it fail in England?

The Commissioners of Birkenhead are being warmly supported by the people, who are competing to have the line laid before their respective doors. This may suggest to other corporations that the public will be quick to follow their lead in giving the system a fair trial. Already Liverpool has made a favorable report through her engineer, Mr. Newlands, on my application to construct Street Railways in that borough, and I met the sub-committee on the 28th June, who will report on the same to the Town Council. Messrs. Clark and Heron, of the Manchester Corporation, were much pleased with my models, and invited me to a trial in that city. Messrs. Moir, Govan, Dughorn, Donaldson, and Dick, of the Glasgow Corporation, saw my plans in London, and suggested a trial line to be laid down from the Cross to the Crescent, by Buchanan street and Sauchiehall street. Birmingham and Dublin have my formal application before them; and Messrs. Lewin, Carter, Flinch, Forster, and Sutton, of the London and Greenwich-road Trustees, address me through the Clerk of the Trust, Mr. Charles A. Smith, to say that they "felt favorably disposed to the project, and deem the matter of sufficient public interest to justify their recommending that it should be submitted to a special meeting of the trustees to be convened for that purpose."

Omnibuses were only introduced into Liverpool 30 years ago, and steamboats, railways, electric wires, gasometers, iron bridges, free trade, reform bills, and volunteers (the *national guard* of the land), have all been born during the Queen's lifetime. So, with faith, hope, and energy, and considerable money, I shall establish what a Cunard Captain aptly calls the rich man's comfort and the poor man's luxury. When Liverpool has a good hotel, a decent theatre, a respectable ferry boat, and Street Railways, the "Borough" should be promoted to a "City."

If I am properly supported by the Corporations, the ladies of Lancashire and Cheshire, at no distant day (instead of being packed in a sardine box with a sweep, as in the present omnibus system, or stowed away in the steerage of the Mersey ferry boats—there is no cabin!) can step under cover at any part of Birkenhead into a commodious railway carriage—ride to the pier—walk under a glass arcade into the saloon of the new ferry boat—walk again under a glass arcade from the floating stage to the railway carriage on the Liverpool side, and be taken to St. George's Hall, or the Philharmonic, and thus effect an important saving in umbrellas!

Street Railways in England will soon become a great fact—Birkenhead opens the ball. Liverpool follows. Then Manchester, Birmingham, Glasgow, and Dublin enter the ring; and London cannot well hold back after building the Metropolitan *Subterranean* Railway. A Street Railway can be constructed directly over it in as many months as that will require years. The former costs three thousand per mile—the latter three hundred thousand! In the one you travel in the dark—in the other in broad daylight. The Street Railway accommodates both sexes, while the Metropolitan shuts out one-half the population—the ladies! (Who crosses in the Thames tunnel?) The former stops before every man's door, the latter has stations only at intervals. One starts every five minutes, the other every half minute if required. The Metropolitan blocks up the thoroughfare for months, the Street Railway for hours only. Surely then if London opens wide her gate to permit the Metropolitan to undermine the city, tunnel through sewers, water pipes, gas pipes, and cesspools, at great cost and great inconvenience, she certainly will not shut it in my face when I respectfully ask permission for a fair trial of my Street Railway!

Are not our streets too narrow? asked the leading Christian banker. By no means. London streets are wider than those in American cities. Ludgate hill and Cheapside are of course in your mind. But when we remember that there are some five hundred miles of streets in and about London adapted to this system, why select the narrowest to commence with? All see an ink spot on the white table cloth; but who thinks of examining the fabric? That one black sheep prevents the eye from observing the thousand white ones! First construct a line from Bayswater through Oxford-terrace, and the New Road to the Bank; then another line over Westminster Bridge down those wide solitary streets on the Surrey side to London Bridge, with a branch over Waterloo to the Strand. This would relieve Fleet street of a thousand omnibuses, and thus make way for a single line down the centre of the city to return by another route.

In conclusion, let me say that the egg will shortly be chipped in this country under my patent, at great cost and labor, and I shall endeavor to prevent my chicken (as is too frequently the case with valuable inventions) from becoming somebody else's hen!

This age is practical—save time and you save money—show it an improvement and how soon it is adopted. Free trade in passenger railways is more worthy of English liberality than protection in omnibuses. The day has come to introduce them, for London is all the time crowding for more room.

The horse railway is an important link in the chain of progress. What is more interesting than to run along the path of improvement from the child Asia to the man Europe, stopping a moment to reflect at the slow coach omnibus system at the half-way station of those middle ages when credulity made up for intelligence—when men did the work of horses, and palanquin and sedan chair made way for cab and bus—when captains went to sea without a compass—sailed without chronometers—when geographical knowledge comprised a little batch of sterile land—when philosophy was without scale—astronomy without demonstration—when learning had no printing press, writing no paper, and paper no ink.

Those were the days of wax and birch bark parchment—stereotyping on wood and not leaden types—when they made war without powder, shot, mortars or cannon—without Minnie, Colt, or Armstrong—when magnetism had no telegraph, iron no rails, steam no boilers. When flint and steel, instead of lucifer match made the fire, and the sun-dial instead of the watch told the hour—when trade was without books—correspondence without postage—when merchants kept no ledgers, and shop-keepers no cash books. Surgery had no anatomy then, emetics no ipecacuanha, agues no quinine, clothing no factories, and the Diligence had not even succeeded the pack-horse.

All those days are with the past. The photograph has displaced the daguerreotype. The stereoscope is pushing away the photograph. The telegram saps the brains of the mail bag, and the sewing machine gives antiquity to the "Song of the Shirt."

Battering rams and bows and arrows were not used at Solferino. The gas light supersedes the cocoa nut oil lamp. The quill followed the thorn bush, the steel pen the quill, and who so far behind the age as not to use the copying press? Arkwright's cotton jenny coined pounds in England, while Ely Whitney's cotton gin coined dollars in America. So will the introduction of passenger railways confer a blessing upon the public and add wealth to the nation.

Let me try, said Fulton, and the steamer went four miles an hour; now the rivers and lakes are filled with floating palaces. Let me put the wire between Washington and Baltimore, petitioned Morse, and all the world wondered? Now the girdle is about to be put about the earth, as Shakspeare said, in forty minutes. Nothing was ever accomplished without talking. How could the Government live without an honorable opposition? Truth is sifted through argument. All new inventions must pass through the fiery furnace of scepticism. Nobody believes a fact till demonstrated.

This paper, which was admirably read by the author, excited considerable interest and amusement to an overflowing audience, and gave rise to one of the most able and animated discussions which has occurred during the present meeting of the Association, inasmuch as it elicited remarks from several distinguished engineers, and other gentlemen, who had devoted considerable attention to the subject, and whose opinions upon it carried great weight.

In reply to questions put by the President, Professor Rankin,

Mr. Train stated that his car, as shown by the model, would accommodate inside and out 60 passengers; that the weight of the car was two tons, but that the gross weight of the load would necessarily depend on the weight of the passengers. Two horses would be equal to a gradient of 1 in 30, but that for gradients exceeding that an

additional horse might be employed. On his street rail two horses would take five times more than two on the ordinary road.

Admiral Taylor said he admired the invention very much on account of its simplicity and the great advantages which it offered, but he feared that the talented and ingenious inventor would find, as he had done, a great disinclination to adopt anything which had for its object the prevention of danger or accident, because the very apprehension of either unsettled the public mind. He could speak from experience, having invented ships, railways, and various other contrivances to give the public additional safety and security. As an illustration of this, he had suggested that there should be between the tender and carriages a lumber carriage attached to every train, so that the guard in charge of it might, in case of ap proaching danger, release the carriages and prevent accident, but he could not prevail on any railway company to adopt his suggestion, because the very adoption of it implied an apprehension of danger, and made persons almost anticipate it.

Mr. Arthur Ryland, of Birmingham, enquired whether the proposed street railway would not interfere with other carriages, unless there were two sets of lines, in which case they would require wider streets.

The President suggested that Mr. Train should defer his reply to any remarks until the close of the discussion.

Dr. Carpenter, of Warrington, said he just returned from America, where he had traveled a great deal in these street railway cars, and was strongly impressed with their great advantages. In almost every large city, such as Boston, New York, Philadelphia, Cincinnati, he had seen them in operation, and could truly endorse every one of Mr. Train's statements respecting them, and that no difficulty whatever attended them. The best proof of that was that they had already been in use some time, and that in other large towns these street rails were being laid down. One of the great advantages of these cars was the facility of ingress and egress which they afforded at each end, even when they were in motion. They afforded plenty of room for the passengers; and, in consequence of carrying so many, the fares were as low as 5 cents or 2½d. for almost any distance. The last speaker (Mr. Ryland) appeared to think that street railways would be inconvenient to the general traffic, but it was not found so at Boston, which was most like an English town, on account of its crooked streets; the city was limited in its room, being built on a peninsula, but the system of these horse railway cars worked remarkably well. When all the omnibus traffic and general traffic was one line, and one of these cars took the place of so many other omnibuses, then the streets were considerably lessened of their traffic and confusion. In streets which were very narrow, the lines might be laid in parallel streets, as was the case in Broadway, New York, and the same might be done in the Strand and at Ludgate hill, in London. In places like Manchester and Liverpool he (Dr. Carpenter) could not imagine how it was they had not availed themselves of this great improvement. He did not wonder that the Americans saying that we were wedded to our old-fashioned ways and notions; but let an Englishman once travel on their street railways, and he was satisfied that he would bring home a satisfactory account of them. One great advantage was the extreme quickness with which you traveled from place to place; whereas here, if you got in a bus to ride from the Strand to the Bank of England, you were often strongly impressed with the notion that you might save time by walking the distance. In some streets, which were wide, double lines might be laid down, and single lines in narrow ones; and, where the ascent was steep, the difficulty could be obviated by the employment of an additional horse on that particular part. He was delighted to hear that the street railway system was about to be adopted at Birkenhead; the people in the North were generally foremost in adopting what was good, and he hoped that such a determination would spread among the slower people in the South, for he could assure them that every statement made by Mr. Train was correct and reliable.

Mr. W. Smith, civil engineer, Adelphi, London, said that some five years ago he was in America, and had a very pleasurable recollection of riding in these street railway cars, for the systematic manner in which the whole matter was organized left a strong impression on his mind as to their advantages, and a great desire to see them introduced into this country. The convenience attending them was so striking that it was a matter of surprise that a Mr. Train, some twenty years ago, had not made up his mind to introduce them here, for it only wanted a little effort to make them as general here as they were in America. Notwithstanding what had been said about crooked streets and Ludgate-hill, there was no question that there was enough momentum and energy and skill in Mr. Train's composition to overcome all these difficulties. (Laughter and applause.) He was glad that it was about to be adopted at Birkenhead, and he hoped that it would be extended to Manchester, Liverpool, London, and all large towns where it was most wanted, and would greatly relieve the pressure in our streets. He found that in going from his office in the Adelphi to the Bank of England by an omnibus, it often occupied from twenty-seven to twenty-nine minutes, whereas in a cab the distance could be done in nine or ten minutes; therefore if merchants would value their time by a money rule, they would see the necessity of adopting a more speedy mode of getting from one place to another in the crowded thoroughfares of London.

In reply to a question by Mr. Newman respecting goods traffic, Mr. Train explained that the lines might be used for passenger traffic by day and for goods by night.

Dr. Steadman said he feared that in case of a stoppage on the line some inconvenience might be felt. but doubtless Mr. Train was prepared to meet that difficulty, and would explain how he meant to obviate it.

Mr. Le Neve Foster, Secretary to the Society of Arts, said this was a most important subject, and they were much indebted to Mr. Train for bringing it forward and telling them what had been done and was still being done with repect to it in America. The traffic in the London streets was the great topic of the day, and although it had been before the public for two years, he had never had the opportunity before of hearing what had been done in America. The thing was so simple—and its simplicity was its great beauty—that it was a matter of surprise that it was not more generally adopted, especially as it had worked so well in America, was free from any difficulty, and that the lines were kept clear, notwithstanding the traffic. About two years ago a bill was brought into Parliament for a tramway in London, but in consequence of vested interests, and the Chairman of the Board of Works being opposed to it, it was thrown out. He hoped, however, that it would be tried in London, but it would require an enormous amount of energy and momentum.

Dr. Carpenter remarked that one of the great objections to street railways was that a stoppage in any part would inconvenience the rest, but a plan had been introduced by Messrs. Mayne to obviate that by having an eccentric flange. There was a plain wheel, and at the side an eccentric ring or disc, and by turning a lever it converted it into a railway carriage, and by turning it back it got on the common road. (Applause.)

A gentleman, who is an engineer of high standing, but whose name and address did not reach us, stated that when he was at Baltimore he was surprised at the ease with which the street railway cars ascended steep hills, and the facility with which they were checked in descending. From what he had seen in America, and the system being in operation there so extensively, with a perfect freedom from accident or inconvenience of any kind, there was no valid objection to it, either on account of steep ascents, sharp curves, or interference with the general traffic.

The President said that before Mr. Train replied, he should venture to offer a few remarks on a subject which was so deeply interesting to the whole community. With respect to the system of street railways it would doubtless have been introduced and adopted before now had it not been that the public attention, and the attention of engineers, had been directed mainly towards perfecting the railway system, which comprehended a wider range, and was not restricted to large towns or to a locality. At the same time he was not insensible of the value of the system of street railways, advocated so ably and so successfully by Mr. Train, for it so happened that he was well acquainted with them, his father and himself having constructed one, where they used to convey 40 passengers with one horse up ascents varying from 1 in 66 to 1 in 40, at the rate of 5 miles an hour, their average speed on the level being at 10 and 12 miles an hour. They had level crossings, but yet met with no accident, and although there were continually trains of coal wagons, no difficulty was found in passing them; and there were this convenience, that they could stop when they liked, almost instantaneously, and set down a farmer on his own farm, instead of setting him down at a considerable distance from it. That was the Edinburg and Dalkeith line, but it was afterwards brought up and worked with locomotives, so that the horse power was discontinued. Horse-rails had, in fact, become to be looked on as an exploded system, and but for that reason they might have been introduced here earlier and to a great extent. Having had considerable experience in this matter, he was bound to say that he saw no difficulty in carrying on the traffic in our streets on this improved system; and, so far from its being an obstacle, great facilities would be obtained, for they would reach their destination earlier, and the size of the railway cars, affording increased accommodation, would lessen the number, and thereby lessen the pressure which was now felt in the streets of large and populous places. The rails themselves, constructed as proposed by Mr. Train, presented no obstacle, and would not interfere with the ordinary use of the road, whereas the width of the rails rendered them available by vehicles in general use. As far as his experience went, there was no difficulty whatever in getting round curves of great sharpness or steep ascents, and even on single lines the horses at the end of the journey could be taken from end and put on the other in very quick time, for nothing but traces were required. By Mr. Train's plan breaks were employed, which could be made use of either by the driver or conductor, or both, so that they could stop the fore or hind wheels, or both, if necessary. The carriages, as shewn by the excellent model before them, were of light construction, and not liable to vibration or oscillation, and all these circumstances led him to believe that they would prove as practicable, and as free from danger here as they had proved in the United States. He felt perfectly confident that when they were introduced into this country they would prove as great a boon as they had in America; they were greatly indebted to Mr. Train for introducing it here, and as he was about to put it in force at Biakenhead, they could not regard him in any other light than as the Stephenspn of Street Railways. (Much applause.) With regard to steep ascents, all that

was required was an additional horse, but with respect to Ludgate Hill and Holborn Hill, he was still of opinion that the only effectual way of dealing with them was by a viaduct.

Mr. Train, being called on by the President, replied and said, in answer to Mr. Ryland's remarks, that, as he proposed to make his rail along the centre of the street, it would leave the sides open for general traffic. In reply to Dr. Steadman's observation, as to stoppages on the line, he did not anticipate any, as the increased accommodation of the cars would so materially lessen the number of vehicles that a stoppage was not likely to be so common as at present, in addition to which the traffic would be more divided, and besides this there might be branches where what might be likely to be impediments could be shunted. To show, however, how easily all these difficulties could be got over, he invited all who could not spare the time to witness the advantages of street railways in America to visit Birkenhead, where it would be in operation in September next. Of the ease with which such railways could be constructed, he had entered into a contract to complete it in 30 days from the time of his breaking the ground. He was well aware that in London he had to contend against vested interests, and, although Mr. Cardwell had introduced a clause for tramways in the Irish Railway Bill, and Sir E. Colebroke was doing the same thing for Scotland, and a similar clause was inserted in the Highway Bill, yet he was told that if he wished to introduce the system here he must look to the provinces, and he had done so, for at the present time he was in communication with the authorities at Glasgow, Manchester, Dublin, and Birmingham. He resolved to come Oxford, notwithstanding that there was a general impression tnat the place was so imbued with Latin and Greek that anything so utilitarian would not be entertained for a moment, but having traveled over almost every part of the world, and encountered all sorts of difficulties, he was in no way disheartened or doubtful as to the results. (Applause.) He came to Oxford, and at a time too when the most distinguished men of science from all the parts of the world were congregated within her hallowed walls; his paper was accepted, and he thought that he might fairly say that his views had stood the severest test, and it was gratifying to him to find that they had neither been controverted or even disputed. The interesting and able discussion to which it had given rise, and which had elicited the cordial concurrence of distinguished men whom he had never met before, gave him fresh courage and would stimulate him to renewed exertions. In conclusion, he would only add that he thanked the President and the members of the Association for the kindness and assistance which he had received at their hands, and the only return which he could make for it was to invite them to Birkenhead on the 1st of September, when he should be glad to see them, as they would then be able to judge for themselves, and partake of a collation which he intended to give to commemorate the introduction of his system of street railways in England.—Mr. Train resumed his seat amid much cheering, which rather disturbed the solemnity of the proceedings of the adjoining Section of Economic Science and Statistics, where they were discussing the graver question of the Statistics of the Herring Fishery on the British coasts.

The President thanked Mr. Train for his paper and reply, and especially for his invitation to Birkenhead on the 1st of September, where, in addition to the gratification of seeing the introduction of his system, they were promised something very agreeable in the way of a collation worthy of the occasion. (Laughter and applause.) Although he (the President) might be debarred the enjoyment of both, he should watch the result with considerable interest, and he not only hoped but fully anticipated that ere long the large and populous towns in this country would put themselves in as good a position in this respect as the principal places in America. (Much applause.)

The paper was illustrated by a model, showing not only the construction of the carriages, but of the rail itself; and, at the request of many influential persons, it was exhibited at the Town Hall in the afternoon, and at the conversazione in the new Museum in the evening.

Journal of Railroad Law.

LIABILITY OF COMMON CARRIER FOR APPROPRIATING GOODS ENTRUSTED TO HIM; DISTINCTION BETWEEN LARCENY AND EMBEZZLEMENT.

The question, how far criminality attaches to a person who, while engaged in the responsible duties of a common carrier, separates and converts to his own use, without the assent of the owner, the goods entrusted to him for safe carriage, is often one of much difficulty.

The old common law view of the matter, we think, would be of curious interest to our readers; and we give this week the case of Nichols *vs.* the People, decided by the New York Court of Appeals, in which the question is ably considered, and the cases bearing upon it are reviewed.

Nichols was convicted of converting and embezzling to his own use, without the assent of the owner, certain pig iron entrusted to him, as a carrier, for transportation upon the Erie canal from Albany to Buffalo. Being the owner and captain of a canal boat he took on board at Albany thirty-four tons of pig iron, which he agreed with the owner to transport to Buffalo. The iron was in bars, each of which weighed about one hundred pounds. On his passage to Buffalo he stopped his boat at Whitesboro' in the night, and then put off from the boat one hundred bars of the iron, of the value of $175. The remainder of the iron was delivered at Buffalo. There was evidence at the trial tending to show that the removal of the iron was with a felonious intent.

We have seen the prisoner was convicted of embezzlement. The question was whether under these circumstances the conviction should be for embezzlement or for larceny. The following is the opinion of the court.

PRATT, J.—It was conceded upon the argument in this case, that if the evidence upon the trial at the Oyer and Terminer established a case of larceny, the conviction was wrong. The simple question for our examination, therefore is, whether the separation of a portion of the iron from the whole, and the felonious conversion of it, constituted larceny.

At common law it was well settled that if a carrier or other bailee opens a bale or package of goods, or pierces a vessel of wine and takes away and disposes of part of it, it is larceny, although if he has disposed of all of it, it is a breach of trust merely; and under this it has been held that taking an entire bale from several would not constitute the offence. Various reasons have been assigned by commentators for this distinction, none of which are entirely satisfactory. It has been said to be such proof of the original felonious intention that it has always been held to be larceny. As suggested in 2d East's Criminal Law, if taking a part is evidence of the original felonious intent, no less surely, would the taking of the whole be. Again, it is said by BLACKSTONE, that if a carrier opens a bale or pack of goods, or pierces a vessel of wine, and takes away a part, it is larceny, for here the *animus furandi* is manifest, since he had otherwise no inducement to open the goods.

But the prevailing principle upon which the distinction is placed is, that the act of breaking the package or bale is an act of trespass in the carrier by which the privity of contract is determined; and also the principle is said to stand more upon positive law, not now to be questioned, than upon sound reasoning, yet it seems to be admitted to be the correct principle in all the cases in which the question has been canvassed.

In the case at bar it is insisted, on the part of the people, that the bailee can commit larceny only where he actually breaks a bale or package; that it is this breaking alone which can determine the privity of contract and render the asportation by the carrier a trespass. But this, I think, is too narrow a construction of the rule, and one not sustained by the commentators and adjudications. Any separations of a part from the whole would seem to be as much a trespass as the breaking of a package. Indeed, it is the separation that constitutes the trespass. This seemed to be conceded upon the argument in regard to grains and things of that kind; but a distinction was attempted to be drawn between grain and iron in the form of pigs.

But I am unable to perceive the force of the distinction. What the rule might be in the case of articles having, as it were, a separate identity, like barrels of flour, saw logs and the like, it is not necessary to inquire. In this case the iron was in a condition in which it is transferred in bulk by the hundred pounds or by the ton, and not by count. Although more readily separated by individual count than the kernels of grain, it is not a subject of trade or commerce by count any more than grain is; and a separation of a part from the rest would seem to be just as much a trespass as the separation of a portion of a load, in bulk, of corn, apples or potatoes from the whole would be. It is this separation of any article conveyed in bulk, by a carrier, from the whole, which constitutes the distinction between larceny and embezzlement.

In East's criminal law it is said: "The separation of the part of the goods from the rest, with a felonious intent, seems, however, to be material when they are delivered as one entire body or mass, though no case or package be broken, because such an act equally evinces a determination of the privity of the contract." He cites Ralle's Abridgment where it was held that "if a man says to a miller who keeps a corn mill, 'thou hast stolen three pecks of meal,' an action lies; for, although the corn was delivered to him to grind, nevertheless, if he steal it, it is felony, being taken from the rest."

So Hawkins says: "Those having possession of goods, by the delivery of the party, may be guilty of felony, by taking away a part thereof with an intent to steal it, as if a carrier open a pack and take out part of the goods, or a weaver who has received silk to work, or a miller who has corn to grind, take out part with intent to steal it, in which case it may not only be said that such possession of a part, distinct from the whole, was gained by wrong and not delivered by the owner, but that it was obtained basely, fraudulently and clandestinely, in hopes to prevent its being discovered at all, or fixed upon any one when discovered." This latter reason, I apprehend, would apply much more forcibly to the separation of a part from the whole, when it is in open bulk, than where a package is broken open.

I have now referred to the principal cases upon the question, and it seems to me quite clear that this was breaking bulk within the meaning of the rule as established by those cases. The separation of a part from the whole bulk or mass was a trespass, determining the supposed privity of contract; and I think our statute for the punishment of embezzlement is based upon this view of the law. It provides "that if any carrier or other person to whom property shall be delivered to be transported for hire shall convert, &c., in the mass, as they were delivered, without breaking the box, trunk, pack, or other thing in which they shall be contained, he shall be punished in the same manner as if he had taken, &c., such goods after breaking the trunk, box, pack, or other thing containing the same, or after separating any of them from the others." The language of this provision clearly recognizes the separation of a part from the rest, as breaking bulk.

This case turns upon a narrow point, and no actual injustice to the prisoner, perhaps, would be done by affirming the judgment below; but our decisions are precedents for future cases, and although this prisoner may go unwhipt of justice in consequence thereof, yet we must propound the law as we find it, whatever the consequence may be in this particular case.

New Brunswick and Canada Railway and Land Company.

The half-yearly meeting of this company was held at Whitehall, July 31st. The report stated that during the past six months arrears of calls had been received to the amount of £25,523. The expenditure, including all liabilities to 30th June last, reached £9,338, of which upwards of £5,250 had been returned to the shareholders as interest upon the amount paid up, being allowed as rebate upon calls. The arrears of calls at present outstanding upon existing shares were £22,059, in addition to which the company held bills from shareholders amounting to £2,555. Debenture bonds to the extent of £1,575 had been issued. The Directors reported the non-payment by the contractors of £15,000, which they were bound to advance under the terms of their contract, and the company's special agent, Mr. Osburn, after giving them ample time to procure assistance from others, or repair any defect in their own arrangements, had been obliged to declare their contract at an end. Under these circumstances Mr. Osburn had not expended any of the money with which he had been intrusted for relieving the liabilities of the company in the province; and until another contractor be found those liabilities must continue unpaid. Mr. Osburn, however, reported that other offers had been made to him, upon which the Directors had requested further information. The Directors had also to report that Mr. Conybeare's appeal to the Lords Justices from the judgment of of Vice-Chancellor Stuart had been heard. The Lords Justices had fully exonerated the Directors from the charges made against them, and declared that the plaintiff was entitled to receive back the money paid by him to the company, on grounds which the Directors were advised by their counsel were untenable. They had, accordingly, given notice of an appeal to the House of Lords. The chairmain stated that it contained all the information the Directors could give. They regretted that the contract entered into in March last had not been carried out by the contractors. This was a matter beyond the control of the Directors, and had arisen from the inability of the contractors. The Directors had raised a sum of £15,000 to meet the payment of a like amount by the contractors, but they had failed to find it. This had caused a delay of six weeks before the board were informed of it. Every exertion had been made on the part of the Directors to carry out the undertaking, and they were now in negotiation with other parties. The Government of New Brunswick were in favor of the undertaking. They had given the company an extension of time and other facilities. Mr. Conybeare said if the shareholders had any regard for their interests they would refer the report to a committee for inspection. The chairman having read a letter from a contractor to show that they were in negotiation for the completion of the 25 miles of railway to Woodstock, and that the debentures of the company would be taken in payment, a discussion ensued respecting the litigation instituted by Mr. Conybeare, in the course of which an amendment by him, seconded by Mr. Austen, to the effect that the report be not received but laid on the table, was rejected, and the report of the Directors adopted. It was stated that the arrears on calls would be paid up when the works were resumed, and it was considered that the arrears were a good asset to reduce the balance due to the bankers. Mr. Field, chairman of the committee of shareholders appointed last year, stated that they had no further report to make, and that their functions would cease.—*London Railway Times.*

Halifax and Quebec Railway.

The Canadian system of railways is completed from Port Sarnia, at the foot of Lake Huron, at the west, to River du Loup at the east, on the banks of the St. Lawrence, 110 miles below Quebec, but the Gulf of St. Lawrence is closed by ice half the year, and the portion of the line from Quebec to the River du Loup was constructed to meet the line from Halifax.

The Portland branch, by which the Canadian railways have access to the ocean in winter, passes for 150 miles through the United States, and has its Atlantic terminus in that country; it is subject to all the disadvantages of a foreign custom-house, and cannot be employed for any military or political purpose.

The Imperial Government at present subsidize two mail steam packet companies from the United Kingdom, to the ports of Boston and New York alternately, by an annual payment of £280,000, or equivalent to a guarantee of four per cent. on a capital of £7,000,000 sterling, and which acts as a direct bonus in favor of the ports of Boston and New York and their railroad communication to the Canadian frontier.

The Canadian railways have, therefore, to compete against a guarantied capital by the Imperial Government, equivalent to £7,000,000 sterling. To maintain their position against such odds, and for the protection of Canadian interests generally, the Canadian Government have felt themselves compelled to subsidize a line of steamers of their own, at an expense of £85,000 sterling per annum. These steamers run in connection with the Canadian railways to Quebec in summer, and to Portland while the St. Lawrence is closed in winter, and therefore in opposition to the steamers subsidized by the Imperial Government.

The contract between the Cunard Company and the Imperial Government requires that all their steamers shall (if requested by the Postmaster General) call at Halifax.

On the completion of the Halifax and Quebec line, the whole of the passengers, mails and merchandise by the subsidized steamers would be intercepted at Halifax, and, by their being landed there, would reach their destination throughout all Canada and the Western States, *via* the Canadian railways, two days earlier than by any other route; the same acceleration would apply to their embarkation at Halifax for Europe.

Halifax is 400 miles nearer to Europe than either Portland or Boston, and 547 miles nearer to New York. 219 miles of the railway between Halifax and Quebec are already made, and 350 miles remain to be constructed.

The completion of the Halifax and Quebec Railway, and the requiring of all the subsidized steamers to call at Halifax, would turn what now acts as a bonus of £280,000 a year against the Canadian railways into a bonus of that amount in their favor.

There would be one uninterrupted line of railway from Halifax to Lake Huron, 1,400 miles, entirely to British territory, in the hands of two companies, which could be worked by one rolling stock.

The completion of the Halifax and Quebec Railway, in addition to securing to the Canadian railways the mails and passengers between Europe and Canada and the Western States, and *vice versa*, would also secure nearly the whole traffic between Canada and her sister provinces of New Brunswick and Nova Scotia, which at the present time passes almost entirely through the United States during the six months that the St. Lawrence is closed by ice.

The direct trade between Canada and New Brunswick and Nova Scotia amounts only to about half a million sterling per annum, and yet the main articles imported from the United States into Canada, which consist principally of British manufacture and West India produce, could be supplied from Europe and the West Indies direct, through the ports of Nova Scotia and New Brunswick, at a much cheaper rate and more expeditiously were the Halifax and Quebec line completed. Again the main articles of import from the United States into Nova Scotia and New Brunswick, which consist principally of breadstuffs, could also be sent more cheaply direct from Canada and the Western States by the St. Lawrence navigation and Canadian lines of railway connecting with those of New Brunswick and Nova Scotia.

The Imperial Government have expressed their determination not to renew the contract with the West India Royal Mail Steam Packet Company *via* Southampton, but to make the West India, Panama, and Pacific service an offshoot from the British and North American at Halifax.

Canada and its railways would, therefore, on the completion of the Halifax and Quebec line, have a direct ocean service to and from Europe about every three days, and the advantages of a shorter route by two days than *via* the United States; and in addition to this, a weekly service to and from the West Indies and the Pacific, thereby affording incalculable facilities for the extension of the commerce of the United Kingdom.

It is, therefore, not too much to assume that the completion of the Halifax and Quebec Rail-Railway would confer great and special advantages by promoting more rapid communication between Great Britain and her North American colonies, and with the United States and far west, as also with the West Indies and the Pacific.

An immense passenger and freight traffic would thus be produced, which would render the line remunerative not only to the shareholders, but add very greatly to the productiveness of the other public works in Canada.

It is obvious that no project could be devised so well calculated to cement the union between the British North American provinces themselves, on the one hand, and their connection with the mother country on the other, as the completion of the Halifax and Quebec Railway; and in the event of difficulty with the United States, the railway is indispensable to enable the Home Government to throw forces and supplies speedily into Canada to aid in the defence of its extended frontier.—*Canadian News.*

☞ It is stated that some large foreign holders of Michigan Southern First Mortgages have agreed to exchange for Sinking Funds at par, the exchange to be made in Europe, at the cost of the company.

☞ The stockholders' meeting of the Cleveland and Toledo Railroad was held at Cleveland last week. The net earnings for the year are over $76,000 above the running expenses, and interest on the bonds and floating debt. The Directors were as follows: J. B. Waring, Joseph Lyman, Cleveland; Jno. Gardiner Sprangue, Huron; W. M. Vermilye, G. T. Oliphant, Joseph Benjamin, New York; H. N. Randall, New London. All the old board of officers were re-elected.

General Railroad Intelligence.

The city of Fond du Lac has made a proposition to its creditors. It offers to redeem the $100,000 of 7 per cent. bonds issued to the Chicago, St. Paul and Fond du Lac Railroad, by giving the holders an amount equal to the principal and interest due them in the stock of the Chicago and North-Western Railroad, and to the holders of the $150,000 8 per cent. bonds it offers 30 per cent. in the Chicago and North-Western stock, and 25 per cent. in new city bonds, to be secured by a sinking fund.

We learn from the Philadelphia *Ledger* that a negotiation is now pending between the Pennsylvania Railroad Company and the Harrisburg Railroad Company, in reference to the consolidation of the two companies in interest, as they are now in their working operation. The Harrisburg road and its branch connect Harrisburg with Lancaster and Columbia, and are used by the Pennsylvania Railroad Company, under a twenty years' lease, as a link in the through line of the Pennsylvania Railroad. It has long been thought that the Pennsylvania Railroad Company ought not only to control but to own the entire line through to Pittsburg, and having three years ago purchased the main line of the State Works, the Harrisburg road, of thirty-six miles, is now the only remaining link wanting to effect the desired consummation. The Harrisburg company now maintains its organization, pays salaries to officers, interest on its funded debt, &c., and divides to its stockholders ten per cent. per annum, from the revenues derived under its lease. This lease has some eight or ten years to run. It is proposed to make the Harrisburg shares at eight per cent. preferred stock, taken precedence of the stock of the Pennsylvania Railroad Company.

The new Board of Directors have taken possession of the Marietta and Cincinnati Railroad, and relieved the Trustees of the responsibility. No change has yet been made in the executive management of the road.

The agreement under which the five trunk lines represented in the late Convention held at Saratoga will work, after Oct. 8, is substantially as follows:

1. No party to employ runners or agents to solicit passengers, and no through tickets to be sold over lines employing such agent.

2. No company to influence in any way traffic over its route, business being left to take its natural and convenient channel.

3. No freight agents to be kept at the West, except at lake and river ports, and at Boston, New York, Philadelphia, and Baltimore, and no contracts made, except from day to day, at the current rate for the time being.

4. All freight to be carried by weight, and live stock to be weighed at the western terminus of each road.

5. Freights to be uniform between competing points without abatement in any form, and to be strictly maintained. * * * * *

10. Classification of freight to be uniform, and no evasion through the agency of express companies. All express contracts to be terminated on Jan. 1, 1861, at latest, and all agents to be paid by salary and not by commission, and any agent violating this agreement by giving free tikets, or drawbacks in any shape, to be discharged, not to be employed again.

* * * * * *

12. Passenger fares, and extra baggage rates to common points to be uniform, with no abatement to connecting lines,

13. No free passes to employees of other roads, unless personally requested by the President or Superintendent. No season or family passes under any circumstances. Drovers in charge of stock eastward to be passed free.

14. That as soon as possible, a common ticket office shall be established in all the large cities, at the joint expense of the lines using such union offices.

The agreement to be terminated on fifteen days' notice in writing, but no party can withdraw from one or more sections of the agreement without abrogating the whole agreement.

We understand that the Cleveland and Columbus Railway Company have paid off their indorsement for the Columbus and Piqua Company, at the rate of the original cost to the holders of the indorsed bonds, and 7 per cent. interest compounded for four and a half years. The holders of the bonds receive from 108 to 113 per cent. on their face, varying according to the original cost. Most of the holders come into the arrangement, so that about $450,000 is the extent of the loss to the C. and C. Company. It will be recollected that in March, 1856, an injunction was served by one or more of the indiscreet and repudiating shareholders of the company against the further payment of the interest on these bonds, and the case went up to the Supreme Court of the United States at Washington, where the injunction was dissolved and the full liability of the indorsers duly affirmed last Winter. This opened the way to a resumption of interest and the recognition of the principal of the obligation, but in lieu of this the Cleveland and Columbus proposed to retire the bonds altogether on the terms just referred to, which have been generally accepted; most of the bondholders being residents of the North of Europe, (represented by their agents and correspondents here,) and of Duchess County in this State. The settlement might have been made more creditable to the indorsers, who are abundantly able to take care of the par value of the bonds and the accrued and accruing interest, but under all the circumstances of the case, the prompt reimbursement of the original cost and interest is accepted as satisfactory. The credit and honor of the company, whose shares have suffered in the market two or three-fold the actual amount of this litigated claim, since the injunction referred to was moved in 1856, is thus restored in the estimation of the public.

Northern Railway of Canada.

The half yearly meeting of this company was held August 7th in Toronto. The Directors submitted a brief statement of the operation of the road and condition of the capital and revenue accounts since the last report. The redemption of the Government loan they had already reported; and of the whole floating debt for which the appropriation of £50,000 sterling has been made, and claims to the amount of £45,000 have been paid off. Of the whole amount of original bonds of all classes representing a sum of £243,739 14s 6d sterling, bonds to the amount of £233,206 2s 8d sterling have been brought in and acknowledged for new second preference bonds, leaving but a balance of £10,533 11s 10d unclaimed for the exchange necessary to a total consolidation.

The constitutional contract adverted to in the last annual report has been concluded with Mr. Thomas Brassy, of London. That contract is based upon the report of Mr. W. Shanly, Mr. Hodges, and Mr. Fleming, the Company's Engineer. The Directors regard the contract as a guarantee that the property of the company will be placed in a condition of the fullest efficacy, and within the limit of the appropriation made for the purpose. The works will now be energetically proceeded with, as the new iron for track service has already been exported. The postponement of contract works has necessitated a continuance of expenditure in maintaining the road and the large increase in traffic, has rendered the rapid and extensive repairs of rolling stock essential to the carrying of traffic offering. The road and stock is accordingly in improved condition; and although this has been secured in a great measure from revenue sources, it has not impaired but has rather strengthened the credit of that account, and will tend to ultimate advantage in enlarging the provisions under capital, and thus enable the company to meet the demands of a growing traffic.

The road has been operated during the past six months with the safety and regularity which has characterized its previous management. The earnings of the road have largely increased during the current year.

The total earning for the half-year have amounted to $159,414 79 (£36,756 9s 8d stg.,) being an excess of $46,819 04 (£9,620 6s 10d stg.,) on the corresponding period of 1859, and representing a growth in the revenue equal to 41½ per cent. The net revenue for the same period has been $35,-147 05 (£7,221 19s 8d stg.,) being an excess of $24,815 18 (£5,099 0s 1d stg.,) over that of the previous year; and it is proper to note that this increase would have been further augmented, had the revenue been relieved from the special charges above referred to by an earlier prosecution of the contract works.

"The interest on first preference bonds was duly remitted for payment in London on 1st July last, and the balance of net revenue deposited to the credit of second preference bonds, the Directors deeming it advisable to form a fund to that account rather than to resume payments upon it until further time had been given for completing the consolidation of the bonds, and for establishing their credit upon a stable basis; an opinion in which they trust the proprietary will concur.

By the return attached it will be seen that the improvement is revenue in common to all the sources of income whether 'through' or 'local,' in 'passengers' or 'freight;'—but is especially satisfactory to observe that the chief increase has been in purely local traffic, beyond the reach of competition, and of stable character based upon the agricultural and exporting power of the line of country served.

With reference to the "through trade," subject as it has been to the strong competition of all the great trunk lines engaged in Western transportation, it is satisfactory to observe that its revenues, net as well as gross have not only been maintained but augmented whilst those of other lines, almost without exception have declined. The significant fact ought to establish confidence in the ability of this company to secure a profitable share of the established traffic independent of any connections or complications with other interests.

The Directors are satisfied that the traffic of the last six months has resulted from a re-establishment of agricultural and commercial activity calculated to yield to the road continuous and stable traffic of like value. The operations in lumber for future years are being largely extended for future years, the stock awaiting transportation being already unusually large, while the harvest of 1860 promises a yield to exceed that of 1849 at least 40 per cent. apart from these considerations the Directors recognize the tariff established last April an important element in the growth of revenues, and one which will continue to exercise a beneficial effect.

Dubuque and Pacific Railroad.

The extension of this road to Cedar Falls, twenty miles west of its present terminus, and one hundred from Dubuque has been decided upon. The work has already been commenced, and is expected to be completed in time for the Fall business of the present season. The road runs through one of the richest and most rapidly improving sections of Iowa, and the additional twenty miles now being constructed, will add largely to its receipts and give a new stimulus to emigration in that direction. Just twenty-one miles added to the southern branch of the Milwaukee and Mississippi Railroad would form an unbroken line of railroad from Milwaukee to the heart of Northern Iowa. The Dubuque *Times* of 20th inst., says:

For some time negotiations have been in progress between the directors of the Dubuque and Pacific Railroad Company and the creditors of the corporation for some adjustment of the debt of the company, whereby a forcible foreclosure and sale

of its property would be avoided, and provision be made for an extension of the road to Cedar Falls during the present fall. These negotiations have finally ended in an amicable arrangement, and we now have the satisfaction of announcing that by virtue of it the road will be unincumbered of debt and extended to the Cedar River in less than one hundred days, with the prospect of a further extension next year to Iowa Falls.

Railroad Earnings.

The following statement shows the business of the Reading Railroad during the month of July, 1860, compared with the same month of 1859:

	1860.	1859.
Received from coal	$237,789 25	$184,295 60
Do. merchandise.	41,787 15	29,804 60
Do. travel, etc.	35,229 85	34,761 52
	$314,806 25	$248,861 72
Transportation, roadway, dumpage, renewal Fund, and all charges	147,611 65	127,803 87
Net profit for the m'th.	$167,194 00	$121,057 85
Do. for previous 7 mos.	712,297 23	614,810 21
Total net profit for 8 months	$879,491 83	$735,868 06

—showing a net increase for the month of $46,187 over corresponding month last year, and a net increase of $143,623 for the eight months of the present fiscal year, as compared with the same time last year.

The earnings of the Hannibal and St. Joseph Railroad for July, 1860, were $69,697 26
Earnings for July, 1859 ..... 50,017 67

Increase $19,679 59

The earnings of the Central Railroad Company of New Jersey, for July, 1860, were, $102,373 58
For the same month last year 79,431 72

Increase, 29 per cent. $22,941 86

The business of the Central Ohio Railroad for July was as follows:

EARNINGS.

From Passengers	$20,123 13
" Freight	24,816 28
" Express	1,707 07
" Other sources	1,672 67
" Mileage on cars	889 24
Total	$49,209 39

EXPENSES.

Transportation department	$9,523 10
Machinery department	9,795 63
Fuel	3,550 03
Total	$22,868 76

Receipts more than expenses, $26,340 61; balance on hand as per last report, $32,902 12.

The following are the comparative earnings of the Pacific Railroad for the month ending July 31st:

Main Line.	1859.	1860.
Passengers	$25,011 53	$21,223 25
Freight	16,111 39	24,531 25
Mails	2,037 50	2,100 00
Total	$43,160 42	$47,854 60
Increase		$4,694 18

The official statement of the July business of the La Crosse and Milwaukee Railroad is as follows:

Receipts in July	$35,426 05
Expenses in July	34,330 91
Net earnings	$1,095 14

The earnings of the Eastern Division of the Ohio and Mississippi Railroad in July, 1860, compared with the same month last year were:

Passengers, freight, 1860	$72,883 48
" " 1859	68,948 49
Increase	$3,934 99

☞ Col. W. O'N. Perkins, Superintendent of the Tennessee and Alabama Railroad, has kindly furnished us with a comparative statement of the business of his road for the years ending 30th of June, 1859 and 1860, as follows:

	1859.	1860.
From Passengers	$44,448 49	$71,959 23
" Freights	27,206 17	52,129 56
" Extra Baggage	947 75	1,185 95
" Mails	2,238 48	2,421 81
" Sundries	148 68	256 36
Total earnings	$75,129 57	$127,952 91
" expenses	27,550 11	40,709 45
Net earnings	$47,579 46	$87,243 46

Per centage for earnings 37 per cent. and 32 per cent. for expenses.

Per centage net earnings 63 per cent. and 68 cent. net earnings.

Gross gains in 1860 over 1859 ..... $52,828 34
Net 39,664 00

☞ The following is a statement of the semi-annual dividends paid by the New York Central Railroad Company since the consolidation.

Dividend	Rate.	Dividend	Rate.
No. 1, 1854	5	No. 8, 1858	4
2, 1855	4	9, 1858	4
3, 1855	4	10, 1859	4
4, 1856	4	11, 1859	4
5, 1856	4	13, 1860	3
6, 1857	4	13, 1860	3
7, 1857	4		

In August, 1853, the market price of shares in New York was 117; in 1854, the price gradually sunk from 113½ in January to 83½ in December; in 1855, the highest price was 100½, and the lowest 83¾; in 1856, the prices ranged from 100 to 89; in 1857 stock sold as low as 53; and for the year ending 30th June, 1860, the price has varied from 70 to 83. It will thus be seen that a stock which since its creation is never paid less than 6 per cent. and which has averaged 8 per cent. a year, has varied in the market in the seven years embraced, from 117 down to 53—a striking evidence that the market quotation is *not* synonymous with true value. The purchaser at 53 evidently made cent. per cent. on his capital, and the seller, probably such by necessity, has been robbed to the same extent. This stock indeed has always been worth its par and often worth a large per centage above par on account of its extraordinary dividends.

☞ The *Indianapolis Journal* says that the grading of the Evansville and Crawfordsville Railroad extension northward from Terre Haute is progressing rapidly. In fact it is nearly all done.

The Council of Evansville, Ind., has leived a special tax to pay the interest on its subscription of $100,000 to the Evansville and Crawfordsville Railroad, and to pay one-third of the principal—$33,333 50—now due. The principal, interest, and exchange will amount to about $37,000. The special levy of 40 cents on the $100 of taxables will yield a revenue of some $18,000. The remaining $19,000 will be provided for by an appropriation from a sinking fund and by a small loan. In a few years Evansville will have its railroad debt paid. The investment, while it has yielded the city nothing in the way of dividends, has been of immense benefit to it in the way of an increase in the value of property.

☞ The railing on the Pacific Railroad was completed on Monday last to the La Mine one mile East of Otterville. The work of laying the rails will now rest a few days, until the timbers for the LaMine bridge are brought up. The bridge is being framed in Syracuse, and, we understand is about finished. After the timbers are brought up, a few days' work will set the track across the LaMine; and then, three days will be sufficient to complete the road to Otterville.

Reading and Columbia Railroad Company.

A meeting of the Directors of this company was held at Litiz, Pa., on the 8th inst., to consult on measures for commencing work on the road. The Lancaster *Union* says:

A committee was appointed and instructed to proceed to New York for conference with the parties in that city interested in the road. It is now pretty certain that $200,000 can be raised along the route. The sum designated to be raised is $300,000, making the amount $600,000 altogether. Two propositions were submitted to the meeting, one of which was that a gentleman of Columbia would agree to take $100,000 worth of stock, and to make the road at the engineer's estimate. The other proposition was that a gentleman of New York had consented to take $200,000 worth of stock, and also to make the road at the engineer's estimate. It is presumed that one of these propositions will be accepted. The prospects of a speedy commencement of this important work are decidedly encouraging.

The Gold Fields of Australia.

The present gold fields of Victoria, which are tributary to the city of Melbourne, have so far given out for the surface digging miners that the latter are seeking new fields of operation, and the merchants and citizens of Melbourne, who have enriched themselves by furnishing supplies to the miners and buying their gold, have become alarmed lest they shall lose this lucrative traffic by the migration of the miners to localities of which other seaports will be the natural trading points. To avert this serious danger to their prosperity, the government has dispatched several parties to explore the still unopened portions of Victoria in the expectation of discovering new gold fields which will furnish profitable employment to the now unsettled mining population, and retain them within the colony, and as a consequence, their patronage for the city and port of Melbourne. The region which it is proposed to open up is a large portion of Gipps Land, in the direction of Snowy river and the other streams which take their rise in the southernmost extremity of the Australian Alps.

In the meanwhile the gold reefs, as they are termed, which are numerous in the old diggings, continue to be worked with the most remunerative results. This kind of mining, however, requires both capital and skill. The Melbourne *Argus* states that on the Inkerman Lead at the Ballarat diggings, one company has obtained from as much of the gutter as they have already worked £120,000, or £240 per foot; another on the same lead, £26,000, or £130 per foot; another, £36,000, or £120 per foot; another, £28,000, or £93 per foot; and another, £8,000, or £58 per foot. From three claims on the Golden Point Lead, the returns are: From the first, £18,505, or £37 per foot; from the second, £36,000, or £45 per foot; and from the third, £15,000, or £300 per foot. None of these claims are worked out, but the gold is found at such depths that thousands of pounds are frequently expended before the vein is reached. Some of the shafts are now down more than 800 feet.

American Railroad Journal.

Saturday, August 25, 1860.

Railroad Reports.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Iron Bridges.

Messrs. A. & P. ROBERTS, proprietors of the *Pencoyd Iron Works,* Philadelphia, have lately completed the erection of an Iron Bridge for the Harrisburg and Lancaster Railroad Company at the crossing of the Conawago Creek, Lancaster County.

The design is that known as the "Whipple Rectangular Truss"—ninety feet total length, proportioned to carry a moving load of 3,000 pounds per lineal foot, subjecting the wrought iron parts acting by tension to no greater strain than 8,000 pounds per square inch of cross section, and the cast iron parts acting by thrust to no greater crushing force than 10,000 pounds per square inch.

This bridge has taken the place of a wooden one; it was contracted for on the 31st day of May last and completed on the 12th day of August, without the stoppage of a single train.

The bridge is used by the Pennsylvania Railroad Company for the passage of their heavy passenger and freight engines.

The Messrs. A. & P. ROBERTS expect to complete the erection of one of Whipple's Bridges,

158 feet span for the Illinois Central Railroad this week.

The Engineer.

Mr. ZERAH COLBURN has returned from England where he has some time resided, and has commenced, in Philadelphia, the publication of a weekly journal entitled *The Engineer* of which the first number has been received. Its contents is made up of articles of general rather than special bearing. We presume its future numbers will be of a more pointed character. There is great want in this country of a journal devoted to our mechanical interests. Philadelphia, which more than any other city, is the centre of these, is probably the best point for the publication of such a journal. Mr. Colburn has selected a good subject and a good plan for its completion.

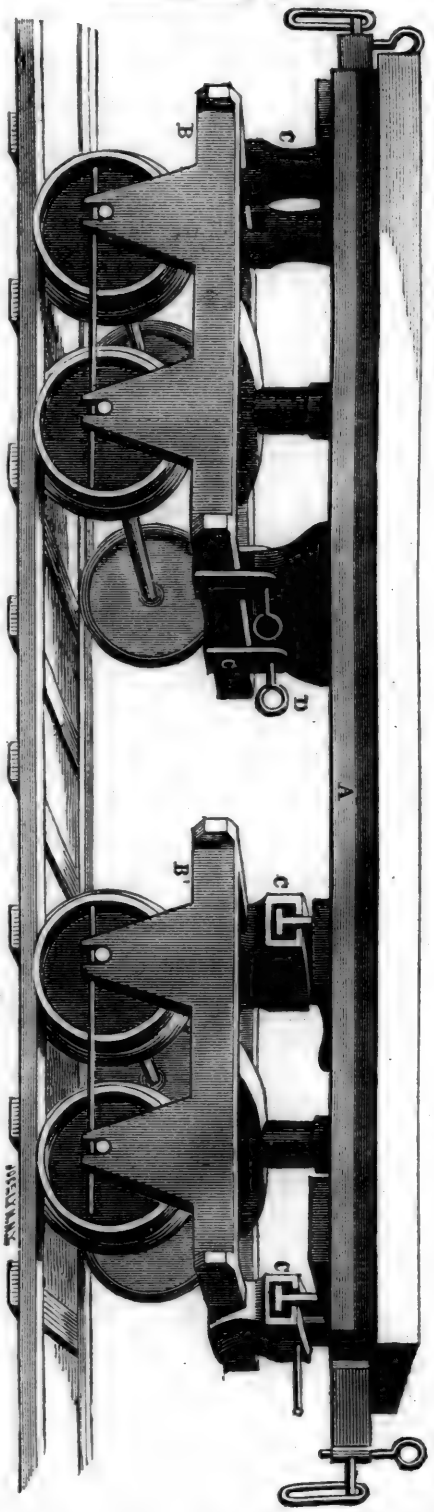
Reversible Railroad Checks.

The New York Central Railroad Company have recently adopted a baggage check which does away with the trouble of having baggage re-checked over the different roads. It is called the *reversible* check, and consists of two pieces. The check attached to the baggage is two inches in length, the one carried by the holder an inch and a half in length; the large check on one side has the initials, "N. Y. C. R. R.," on the reverse, "G. W. R. R.," to Detroit. At the end of the Central road the strap is drawn through the check, and the initials of the latter road are in full view of the baggage-master. The small check bears the initials, "Troy to Detroit." It is an excellent invention, and saves the traveler a vast deal of annoyance and trouble at the ends of the different roads. The Central have checks of the above description over nine different roads to the West.

Cleveland, Painesville and Ashtabula R. R.

At the annual meeting of the stockholders of this road, held in Cleveland, on the 14th inst., the following Directors were chosen: A. Stone, Jr., S. Witt, Wm. Case, T. M. Kelley, W. D. Beattie, H. B. Payne, and W. Collins, Cleveland; J. B. Johnson, Erie, Pa.; James Miles, Girard, Pa.; S. J. Randall, Philadelphia; Hamilton White, Syracuse, N. Y.; E. M. Gilbert, Utica, N. Y.; C. C. Dennis, Auburn, N. Y. They constitute the former Board, with the exception of Wm. Collins, elected to supply the vacancy caused by the death of Alfred Kelley.

At a subsequent meeting of the Board, the following officers were elected:



President, AMASA STONE, Jr.; Vice-President, S. Witt; Secretary, G. B. Ely; Superintendent, H. Nottingham. A. Hills was re-appointed General Freight Agent, A. Ely, Paymaster, and Nicholas Bartlet, Auditor and Registrar.

The half-yearly statement shows the gross receipts to have been as follows:

Six months ending July 1, 1860.....	$508,326 18
Six months ending July 1, 1859.....	453,485 32
Increase.....	$54,840 86

☞ The branch railroad from the village of Hackensack, to connect with the Erie Railroad, about a mile below the Boiling Spring, we understand will be completed the present season. The road-bed over the meadows, about three miles, is built, and about 100 men and 50 horses are at present at work on the line. The length of the connecting line is about five miles, with a branch of one mile to the works of Mr. Rennie, at Lodi.

Moore's Safety Truck.

Above we give a cut of a new Safety Truck patented by CHARLES S. MOORE, Esq., Master Machinist of the Orange and Alexandria Railroad. The cut shows the character of this invention so well that a full description of the same is superfluous. Its object is thus stated in the application for the patent:

"Should a wheel or axle break, they could not by even coming against the remaining wheel, axle, or truck, turn it around from its proper position in relation to the car body, because the extent of motion of the truck out of a right line is limited and defined, and though it may turn to this limit yet it will still keep on the track, and thus save the car, locomotive, or tender, from being thrown off; nor will the car body by such accidental breakage be much, if any, let down or swayed, it will continue on the track and hold the truck parallel, or practically so, to itself, and thus avoid the danger of being thrown off. This construction has proven in practice that a car may be run several miles with a broken axle without leaving the track."

Population of St. Louis.

A census of St. Louis has just been taken by authority of the city government. The result is as follows:

Total white males.....	73,320
Total white females.....	68,346
	141,666
Slaves.....	1,245
Free colored.....	1,019
Total population.....	144,930

Alabama and Florida Railroad.

The general meeting of the stockholders in this company was held at Pensacola, on the 7th May ult., and the officers for the ensuing year elected.

The reports of the President, Superintendent and Secretary, exhibit a very favorable condition of the company's affairs, and a rapid development of the enterprise.

The last cargo of rails required for the road arrived at Pensacola on the 1st of April last, and the 1st July was the day set apart for the final completion of the road to the Alabama State line. The whole length of the line in Florida will be 45 miles; of this length, 32 miles had been completed at the date of the report. This road will connect with the line of the same name in Alabama, which has a length of 115 miles, of which 65 miles from Montgomery southward are already in operation, and the remainder will be brought into use on or about the 1st April, 1861. These roads which will probable be worked conjointly, will connect Pensacola with Montgomery and the North and East, and open an outlet for one of the finest cotton regions of Alabama, and also of the whole west section of Middle Georgia.

Otherwise the connections of this road are numerous, and will supply a large traffic. Regarding these, we abstract complete the remarks of the President in his report:

The completion of the Perdido and Junction Railroad will develope a very extensive pine forest lying along the valley of the Perdido river. The extension of this road in due time to the Tensas river, opposite Mobile, will carry to the markets of Blakely and Pensacola lumber and naval stores of every description drawn from the finest forests in the world—these forests chiefly lie in a natural state, for, from their isolated position, the woodcutter has been excluded from them. The Perdido and Junction road will afford an outlet for their products, and the improvement of the water courses which meander through them, will eventually bring these large forest regions in easy communication with that outlet. The Perdido and Junction Railroad, now under construction, will be completed in September next. The line is about six miles in extent, and connects the Perdido river with our road at a point fifteen miles distant from Pensacola. The company owning this road are preparing to erect mills on the Perdido river that will furnish the first year 18,000,000 feet of lumber; and it is contemplated to greatly extend their operations, and at the same time to afford encouragement to lumber men in forming establishments tributary to the outlet which their

roads will afford. These developments tend directly to the advantage of Pensacola; and their future growth, produced by the final extension of the Perdido road to the Tensas river, will lead to other developments embracing in time a connection with the Mobile and Ohio Railroad; at once securing to Pensacola a share in the lucrative and increasing trade of the Tombeckby and Alabama rivers, and in due time, of the Ohio river. The other connections by railroads with our own, have not advanced towards completion as rapidly as we have anticipated, and as the interests of the respective companies; and the wants of the rich countries they are intended to bring into easy communication with the Gulf of Mexico would seem to warrant. The Selma and Gulf road has made, comparatively, but little progress; and its final connection with Pensacola and Mobile may not be calculated upon in less than three years—if the rate of progress in construction is not increased. In the meantime, the Central road extending up from Montgomery towards Decatur; and penetrating in its route the coal regions of Alabama, will probably inaugurate the first delivery of coal from the mines direct to the Gulf ports. That era will be an important one in the history of Alabama, adding greatly to the prosperity of that and the neighboring States; and to the commercial and political power of the South, in all of which Pensacola will not fail to largely participate. Conflicting local interests and ignorance of the great value to a country of its coal products carried with facility and cheaply to convenient sea-ports, seem to combine in Alabama to prevent the opening of the coal mines to convenient markets—whose rich and varied products would compare with any coal region in the world. But desirable as the coal development in Alabama may be, and important as it is to the interests of Pensacola and of steam navigation on the Gulf of Mexico and beyond, we may not, in the present aspect of things, hope for that interesting result before the expiration of three years. But, in the meantime, the steam lines that will be established in the Gulf of Mexico, on the completion of the line of railroads extending from Pensacola, via Montgomery, Atlanta, Chattanooga and Nashville, to the Northern and Western States; and via Augusta on one side of the mountains, and Knoxville on the other, to the North-eastern States, will require that an abundant supply of coal should be furnished at Pensacola. And it is fortunate that that supply, retarded in Alabama, can be obtained from England. For it is assured that coal can be delivered on the wharves of Pensacola at $5.50 per ton, by ships seeking cotton, lumber and other freights in this port. At this price for coal, and and even at $6 per ton, the question of steam navigation between Pensacola and the ports of the Gulf is decided in favor of the former place. But when the coal mines of Alabama are opened, by at least two lines of roads to the markets of the Gulf, and South American ports—the development of the coal trade will probably equal that of the cotton trade at Pensacola. The remaining line of road intended to connect with Pensacola—the Mobile and Girard—is still progressing slowly but surely, and will finally connect with the Montgomery, Mobile and Pensacola roads. This company is not so potent in means as the Montgomery, and Selma and Gulf roads, derived either from the richness of the country through which its line passes, or from the wealth of its constituency; yet if what the company has done is the earnest of that which is to come, the completion of the road in due time is assured. This and all other similar improvements of the lines of communication in Eastern Alabama cannot fail to afford a perennial source of prosperity to the Gulf ports, of which Pensacola will be a large recipient—to such an extent indeed as to excite in her no feelings of jealousy toward her neighbors; or to grudge to them their prosperity, with a healthful increase, which they now enjoy.

The Superintendent presents a report of the operations of the road for the year. The rolling stock consists of three engines, and one passenger, one box, four platform, and one hand car. The grading and bridging are so near completion, that it is not probable any impediment will hereafter be offered to the track-layers. When it is considered that all this has been accomplished since the 12th April, 1856, when the ground was first broken, all due credit ought to be accorded to the Directors in forwarding the work to the best of their ability.

"Prior to January last," says the report, "we had but one train for all purposes. This train besides doing what was necessary to do for the contractors, under the contract, performed other services for the contractors, valued at $534 45

Since that time one engine and two—sometimes three—platform cars have been almost constantly in the employ of the contractors.

Their work is valued at 3,788 00

Total $4,322 45

This has been at an expense for wages of engineer of $252 25
Fireman 109 25
There has been paid for pumping water for use of engines 193 10
Value of stock killed by trains is placed at 255 00

No part of the road has yet been received from the contractors, the company, however, have expended in keeping up the track on the first 12 miles, $215.98.

A turn table has been built on the ground intended for our main depot.

A railroad depot scale, and shelter for the same, put up at the city station.

A well dug, water tank and pump, fitted up at station Shepard.

At station Cooper the water is conveyed into the tank by a pipe from a spring which is 11 feet above the top of the tank and about 900 feet distant, thus obviating the necessity of employing any one to supply the tank.

Extra side track has been put in at the city station, and the road extended into the bay 88 feet upon trestle work. These things have been done at a cost of $2,336.34.

The Secretary presents the following statements relative to the financial condition of the company:

1. Statement of the receipts and expenditures for the year ending 30th April, 1860.

RECEIPTS.

Subscription to capital stock	$91,485 20
City bonds and subscription	150,000 00
Bills payable	75,893 71
Sales of land	23,638 43
Passenger and freight account	7,857 02
Sale of bonds	195,000 00
Open accounts due individuals	27,945 06
2d mortgage bonds paid contractors	47,302 97
	$619,122 39

EXPENDITURES.

Construction	$532,791 49
Contingent expenses	3,098 62
Stationery	214 15
Printing	422 60
Office expenses	893 74
Postage	45 63
Wharfage	25 67
Profit and Loss	7 00
Damages	191 00
Road	87 74
Machine shop	514 65
Bills receivable	560 76
Equipment	30,586 54
Interest	11,153 34
Movement	6,183 86
Salaries	12,277 96
Discount	11,200 00
Open accounts due by individuals	3,401 58
Cash	5,466 56
	$619,122 39

2. Statement of the resources and condition of the company 30th April, 1860:

Estimated cost of road and equipm't.	$884,000 00
Liabilities embracing open accounts and bills payable	103,838 17
Balance being excess of assets	162,465 79
	$1,150,303 96
Amount paid on account construction.	$532,791 49
Instalments due and collectable	106,000 00
410 first mortgage bond	205,000 00
Second mortgage bond	106,697 03
Bills receivable and open accounts	3,962 34
Equipment on hand to date	30,586 54
Cash on hand	5,466 56
159,800 acres land	159,800 00
	$1,150,303 96

The total amount of land received by the company has been 192,433¼ acres; of which 165,688 was donated by Congress, and 26,355¼ acres being swamp lands by the State. Of this amount 32,232¼ acres have been sold, leaving in the hands of the company 159,801 acres. The Secretary, who is also Register of the Land Department, presents the following account of operations to date:

PAYMENTS.

Sundry disbursements to date	$983 00
Bills receivable on hand	129 16
Open accounts	6 42
Trustees 1st mortgage bonds	5,000 00
Paid into Treasury	23,337 77
	$29,456 35

RECEIPTS.

Sales to sundry persons	$27,224 54
Amount sales swamp land to sundry persons	1,949 43
Interest on sales to date	208 87
Open accounts	73 51
	$29,456 35

Central Stem (La.) Railroad.

The Alexandria, La., *Constitutional* says: "This is a propitious moment to hand around the subscription for the "Great Central Stem Railroad" of Judge Boyce. Some think this undertaking a dream of delirium—but we believe it to be a fixed fact, and we feel assured that Judge Boyce will spend his immense fortune rather than see its failure. The Judge has the will, and with his money there is sure to be a way."

12.	" 18 "		1 to 1	24.	" 32 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.
Sent, free by mail, in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for $7.50.

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.
THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—
1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.
It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, free by mail, upon receipt of the price. For sale at this office. Price $1.

CEMENT ROOFING.

PATENT MICA
AND
Fibrous Cement Roofing.
IT HAS STOOD THE BEST OF ALL TESTS—TIME!
IT fully sustains the high reputation it has gained, as a PERFECTLY RELIABLE, DURABLE and WATER PROOF ROOFING. It is adapted to every variety of Roof, new or old, and is the best and cheapest Cement in use for repairing OLD LEAKY TIN or other Roofs.
ALL WORK WARRANTED.
Cement for sale by the Barrel, and sent to any part of the Country, with printed instructions for use.
Also, for sale, State and County Rights for a portion of the United States.

CHARLES FRODSHAM WATCHES.
TIFFANY & CO.,
550 BROADWAY, NEW YORK,

RESPECTFULLY INVITE THE ATTENTION OF their patrons and the public to an arrangement recently perfected, by which, in connection with Messrs. WILLARD & SON, of Boston, they have added the
EXCLUSIVE SALE OF THE
CHARLES FRODSHAM WATCH
to the specialities of their Establishment.
To every one who finds either a luxury or necessity in accurate time-keeping, this most accurate and durable of time-keepers presents decisive claims. Combining the results of a long-studied application of science and of a superlatively fine finish, its excellence has been distinguished by the unique awards of
THE GOLD MEDAL AT THE LONDON EXHIBITION OF 1851.
THE GRAND MEDAL OF HONOR (THE ONLY AWARD) AT THE PARIS EXHIBITION OF 1855.
And by PRIZES FROM THE BRITISH GOVERNMENT AMOUNTING TO OVER $15,000.
In recommending it to their patrons, TIFFANY & CO., after a very long and general acquaintance with the works of the best fabricants, and having tested Mr. Frodsham's work by trials of extraordinary severity, are confident in asserting its superiority in every desirable respect, over any watch that has ever come under their inspection. For outside proof of its performance they are authorized to refer to the undersigned gentlemen who have purchased the Watch from them:

CEMENTS.

THE LAWRENCEVILLE MANUF'G
CEMENT COMPANY,
OFFICE 96 WALL ST,
NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.
WM. N. BEACH, President.
CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,
Late OGDEN & DELAFIELD,
ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength. For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER,** 104 Wall st. The above CEMENT is used in most of the fortifications building by government. 43

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale, Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direct from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE,** Secretary, 90 Wall st., N. Y.

HOFFMAN'S
ROSENDALE CEMENT,
OFFICE, 93 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship-board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

New York, Saturday, September 1, 1860.

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

Milwaukee and Mississippi Railroad.

At a meeting of the bondholders, held on the 23d ult., a plan was adopted for the re-organization of this company. A resolution, expressive of confidence in the ability and integrity of the Receiver, was passed. They also adopted a report of the committee of bondholders who had conferred with a committee from Milwaukee, recommending that the city of Milwaukee may receive the second-class preferred stock for their claim of $234,000 and interest—provided the city assent to the agreement within sixty days. The following gentlemen were elected Trustees and Attorneys to act for the subscribers to the agreement: John Catlin, Louis A. Von Hoffman, L. H. Meyer, Wm. Schall, Allan Campbell, William Wilkinson.

Lake and River Navigation.

The State Engineer and Surveyor in compliance with the law of 1854 entitled "An Act for the incorporation of companies formed to navigate the lakes and rivers" made his usual annual report in March last. This has been recently published and a copy furnished us by George R. Perkins, Esq., Deputy State Engineer. From this we learn that there are within the State of New York seventeen companies that derive their powers from the provisions of this law and these have made returns of their condition as required thereby.

The following tables, abstracted from the report contain summaries of all the important information that permits of tabulation.

1. STATEMENT of the capital and debt of each company:—

Companies.	Capital paid.	Debt.	Total.
American Steamboat	$67,400	$13,687	$71,087
American Transportation	270,000	250,114	520,114
Black River Steamboat	10,000	.....	10,000
Buffalo Elevating and Storing	67,600	15,350	82,950
Buffalo and Toledo Transportation	125,000	.....	125,000
Catskill Steam Transportation	20,000	20,043	40,043
Harlem and New York Navigation	45,000	.....	45,000
Lake Erie and Buffalo Steamboat	10,000	.....	10,000
New York and Albany Propeller Line	40,000	.....	40,000
New York and Long Island Steamboat	5,774	9,075	14,849
New York and Western Towing	55,000	25,882	80,882
Northern Transportation	300,000	13,686	313,686
Northern Transportation Line	65,000	15,664	80,664
Ontario Steamboat	40,000	27,759	67,759
Port Henry and Whitehall Towing	10,000	.....	10,000
Western Transportation	839,000	171,151	1,010,151
Total	$1,969,874	$562,363	$2,532,237

2. STATEMENT of the vessels and hands employed, the amount of receipts, and the dividends on capital during the year:—

Companies.	Employed.—Vessels.	Employed.—Hands.	Gross Receipts.—Freight.	Gross Receipts.—Other.	Gross Receipts.—Total.	Am't Divid'd.
American Steamboat	8	84	$762	$28,502	$29,264	.....
American Transportation	146	1,015	510,086	55,038	565,123	.....
Black River Steamboat	2	7	4,380	.....	4,380	.....
Buffalo Elevating and Storing	2	..	.....	12,000	12,000	.....
Buffalo and Toledo Transportation	3	70	66,250	1,557	67,802	$12,500
Catskill Steam Transportation	1	20	7,925	16,405	24,330	.....
Harlem and New York Navigation	2	22	3,659	34,428	38,087	4,500
Lake Erie and Buffalo Steamboat	2	95	7,240	49,349	56,589	2,500
New York and Albany Propeller Line	3	38	37,009	6,493	43,502	.....
New York and Long Island Steamboat	1	14	1,793	5,481	7,284	.....
New York and Western Towing	1	160	8,804	71,465	80,359	.....
Northern Transportation	12	244	232,011	21,586	253,597	.....
Northern Transportation Line	41	300	200,000	35,000	235,000	14,625
Ontario Steamboat	6	136	24,361	42,540	66,901	.....
Port Henry and Whitehall Towing	1	5	.....	12,329	12,329	4,900
Western Transportation	160	1,000	474,786	35,347	510,133	.....
Total	386	3,210	$1,579,157	$427,521	$2,006,678	$39,025

The information further than contained in the above tables, furnished by the report, will be found in the following descriptions of the companies severally.

American Steamboat Company. Owns three Steamboats—the New York, 995 tons, the Northerner, 905 tons, and the Jenny Lind, 466 tons; and operates on Lake Ontario and River St. Lawrence touching at Ogdensburg, Prescott, Morris-

town, Brockville, Alexandria Bay, Clayton, Cape Vincent, Toronto and Lewiston. Principal office —Ogdensburg, St. Lawrence Co., N. Y. The company has been dissolved and its affairs are in the hands of E. B. Allen, J. G. Averell and W. J. Averell, receivers appointed by the court.

American Transportation Company. Owns 18 propellers and 133 canal boats. The propellers are the Iowa 981½, Potomac 818½, Chicago 758½, Buffalo 689, Alleghany 601, Edith 559, Forest Queen 467, Niagara 450½, Pocahontas 426½, Cataract 393½, Scioto 384, Spaulding 380, and New England 351½—total 7,262 tons. The canal boats average 100 tons measurement. The company during the year sold three propellers, one steamtug and six canal boats; and three propellers were lost. The business of the Company is transacted on the Hudson and East rivers, the Erie Canal, Buffalo Creek, Lake Erie, Detroit river, Lake St. Clair, St. Clair River, Lake Huron Lake Michigan and all the navigable rivers connected therewith. Principal office—Buffalo, Erie Co., N. Y. Officers for 1859-'60—Franklin Lee, President, and James C. Evans, Treasurer and Secretary.

Black River Steamboat Company. Owns one steamboat of 150 tons, and one lighter of 50 tons. Navigates the Black River from Lyon's Falls to Carthage 42½ miles. Principal office—Lyon's Falls, Lewis Co., N. Y. Officers for 1859-'60—Lyman R. Lyon, President and Acting Treasurer; N. B. Sylvester, Secretary, and Walter Whittlesy, Superintendent.

Blanchard Steamboat Company. Insolvent and property sold. The only steamboat owned by the Company was burned, and nothing is known to exist except judgments against the company. Charles H. Trask, Assignee.

Buffalo Elevating and Storing Company.—Owns two elevators, valued at $120,000 and transacts business on Buffalo Creek and Hatch's Slip. Principal office—Buffalo, Erie County, N. Y. Officers 1859-'60—Hiram Niles, President; W. H. Abell, Treasurer, and S. S. Guthrie, Secretary.

Buffalo and Toledo Transportation Company. —Owns three propellers, the Orontes 259, the Euphrates 587, and the Araxes 593—total 1,769 tons; and transacts business on Lake Erie between Buffalo, Erie, Cleveland, Sandusky and Toledo. Principal office, Buffalo, Erie Co., N. Y. Officers 1859-'60—Dean Richmond, President, and Thos. D. Dole, Treasurer and Secretary.

Catskill Steam Transportation Company.—Owns one steamboat, 341 tons, and navigates the Hudson River between the harbor of New York and Catskill Creek. Principal office, Catskill, Greene Co., N. Y. Officers 1859-'60—Geo. H. Penfield, President, and Isaac Pruyn, Secretary and Treasurer.

Harlem and New York Navigation Company. —Owns two steamboats—the Sylvan Grove, 283 tons, and the Sylvan Shore, 217 tons; and operates on the East and Harlem rivers and in the harbor of New York. Principal office, Harlem, New York Co., N. Y. Officers 1859-'60—W. H. Colwell, President; Henry P. McGown, Treasurer, and J. N. Watson, Secretary.

Lake Erie and Buffalo Steamboat Company. —Charters two steamboats, the city of Buffalo, 2,100 tons, and the Western Metropolis 2,000, and operates on Lake Erie between Buffalo and Cleveland. Principal office, Buffalo, Erie Co., N. Y. Officers, 1859-'60—John Stryker, President, and R. B. Chapman, Superintendent, Treasurer and Secretary.

New York and Albany Propeller Line.—Owns two propellers and one receiving barge, viz.: the Western World, 442 tons, the Erastus Corning, 442 tons, and the Dutchess County, 189 tons. Principal office, Albany, Albany Co., N. Y. Officers, 1859-'60—Benjamin Akin, President; Samuel Schuyler, Treasurer and Superintendent, and Robert Courtney, Secretary.

New York and Long Island Steamboat Company.—Owns one steamboat, the Ocean Wave, 270 tons, and operates upon the East River, Long Island Sound, Huntington Bay, and Stoney Brook and Port Jefferson Harbors. Principal office, Port Jefferson, N. Y. Officers, 1859-'60—Reuben H. Wilson, President, and Thomas T. Ritch, Treasurer and Secretary.

New York and Western Towing Company.—Owns about 200 mules and horses with their harness, and one canal boat, 175 tons. Principal office, Albany, Albany Co., N. Y. Officers, 1859-'60—William Coffin, President and Treasurer, and Albert H. White, Secretary. The Secretary's address is No. 118 Broad st., New York City.

Northern Transportation Company.—Owns 12 propellers, 4,190 tons, and transacts its business on the rivers Detroit, St. Lawrence and St. Clair, and the Lakes, Ontario, Erie, St. Clair, Huron, and Michigan and the waters connected therewith. Principal office, Ogdensburg, St. Lawrence Co., N. Y. Officers, 1859-'60—Philo Chamberlin, President; Charles L. Thompson, Treasurer, and John H. Crawford, Secretary.

Northern Transportation Line Company.—Owns two steamboats, one propeller, two sailing vessels and 36 canal boats, and operates on the waters of the East River, New York Bay, Hudson River, Champlain Canal, Chambly Canal, Richelieu River and the St. Lawrence. Principal office, Whitehall, Washington Co., N. Y. Officers, 1859-'60—Thomas T. Vaughan, President, and Oliver Blascom, Treasurer and Secretary.

Ontario Steamboat Company.—Owns six steamboats, viz.: the Bay State 935 tons, the Ontario 832 tons, the Cataract 577 tons, the Niagara 573 tons, the Montreal 295 tons, and the British Queen 291 tons; and transacts business on Lake Ontario and the river St. Lawrence, operating between Prescott, Morristown, Brockville, Alexandria Bay, Clayton, Cape Vincent, Kingston, Sackett's Harbor, Oswego, Charlotte, Lewiston, Toronto, and Ogdensburg. Principal office, Oswego, Oswego Co., N. Y. Officers, 1859-'60—Samuel Farwell, President; J. B. Penfield, Treasurer and Secretary, and H. N. Throop, Superintendent.

Port Henry and Whitehall Towing Company. —Owns one propeller, the John H. Reed and transacts business on Lake Champlain. Principal office, Port Henry, Essex Co., N. Y. Officers, 1859-'60—Jona. G. Whitherbee, President, and Pierre Dupries, Secretary.

Western Transportation Company.—Owns 14 steam propellers, one steam tug, two sailing vessels and 143 canal boats. The propellers are as follows:—Plymouth 846 tons, Mayflower 624 tons, Mt. Vernon 578 tons, Dunkirk 542 tons, Old Concord 457 tons, Mary Stewart 414 tons, Omar Pasha 344 tons, Illinois 530 tons, Saginaw 407 tons, Mohawk 789 tons, Tonawanda 822 tons, Neptune 636 tons, Free State 768 tons, Missouri 589 tons. The company's business is transacted on the waters of the East River, New York Bay, Harlem River, Erie Canal, Niagara River, Buffalo Creek, Lake Erie, Cuyahoga River, Maumee River, Detroit River, Lake St. Clair, River St. Clair, Lake Huron, Lake Michigan, Milwaukee River and Chicago River. Principal office, Tonawanda, Niagara Co., N. Y. Officers, 1859-'60—John Allen, Jr., President; E. L. Fursman, Treasurer, and B. A. Root, Secretary.

So far as these reports go, they are exceedingly valuable. They are however very imperfect, *first*, in information, and *second*, in the number of companies embraced. In the latter connection we would ask why only a few of the joint stock companies in the steamboat interest are required to report annually on their affairs to the exclusion of all others and the far greater number. Why do not our laws compel the *ferry* companies to disclose their condition? Why are not, indeed, all other companies incorporated under the laws of the State compelled to do the same thing? It is not that we wish to pry into their individual affairs, but that we require the information for general economical application. With regard to the amount of information to be educed from such companies, we can only say that it ought to be full and explicit. We ought not only to have the number and tonnage of the vessels employed but also their power (of steamers) and the number of trips made with the amount of freight and number of passengers and the direction of each carried. We ought also to be informed on the charges for freight and its value. Apply even the requirements of the Railroad law to this interest, and a large step towards perfection would be obtained; but we would go further than this and embrace also the information stated by the State Engineer in his last railroad report to be desirable. In the document referred to, the State Engineer says p. 17:—"During the past ten years great and important changes have been made in the management of railroads, and there are now many conditions and circumstances connected with the business operations of our railroads which cannot be brought out under the present form of reporting. For instance we are unable to distinguish the way freight from that which passes over the entire length of the roads, neither can we determine whether the movement is to or from tidewater. We have no separate account of live stock which is transported, no special account of the milk business; and there are many other particulars which it is important to have given in detail which cannot now be reached." If this extension of detail is necessary to be reported by railroad companies, is it less important that navigation companies should comply with the same rule? Both are alike engaged in the movement of persons and property, the one by land and the other by water, and it is alike important for both to state particulars. The principle is the same in both cases and, if carried out, a much more accurate idea of the vast extent of the internal commerce of the country than is now possessed would be elicited.

Journal of Railroad Law.

POWER OF A CORPORATION TO PURCHASE; HOLD; AND RE-ISSUE ITS OWN STOCK.

The question as to whether stock, that is repurchased by the corporation issuing it, is canceled by the act of purchase by the corporation; or whether it still exists in specie, as stock held by the company in the character of purchaser, is considered in the case of the City Bank of Columbus *vs.* Bruce *et al.* This case decides that in the absence of prohibition by statute a corporation may purchase its own stock, hold it unextinguished and afterwards re-issue the same.

The plaintiffs were holders of a note given by the defendants Bruce & Fox, to the Columbus Insurance Company for a certain amount of its stock; the note having been endorsed by the company to the plaintiff.

One of the defences relied upon by the defendants was that the note upon which the action was brought was invalid in the hands of the Insurance Company, because it was given for a subscription to the stock of the company without a compliance with the provisions of its charter. Section second of its charter was: "The capital stock of this company shall be one hundred thousand dollars, which may be increased, at the will of the stockholders to three hundred thousand dollars, divided into five thousand shares of twenty dollars each. At the time of subscribing, there shall be paid on each share five dollars, and the balance of each shall be subject to the call of the directors, and shall be secured by indorsed notes, payable on demand, or other property or stock."

It appeared that the Columbus Insurance Company began business with a capital of $100,000. It afterwards resolved to increase its capital to $300,000. In 1842 the company resolved that any stockholder indebted to it, on stock notes might pay by transferring to the company stock to the amount of $113 for $100 of such indebtedness. Under this resolution some of the persons who had taken the additional stock issued as above stated, surrendered their stock to the company, to the amount of about $133,000.

The directors afterwards adopted a resolution that the capital stock be increased to $300,000, and that the president and secretary, or such person as they might appoint for that purpose, "be authorized to receive subscriptions of stock to the amount of ninety thousand dollars; or so much as may be necessary to make the capital stock up to three hundred thousand dollars," upon certain terms therein specified, which authorized the reception from subscribers of notes secured by mortgage, indorsement or stocks. Under this resolution stock was issued amounting to $32,000, among which was the note on which this action was brought.

The plaintiff had a verdict, and the judgment rendered therein having been affirmed at a general term the defendants appealed to the Court of Appeals, which also affirmed the judgment of the Court below. The following is that portion of the opinion of the Appelate Court bearing upon the point under consideration.

SELDEN J. Among the numerous points raised upon the trial of this cause, there are several which, in the view I take of the case it will be found unnecessary to consider. It is insisted, on the part of the defendants that the note upon which the action is brought was invalid in the hands of the Columbus Insurance Company, because it was given for a subscription to the stock of the company, without a compliance with the provision of section two of the charter; which requires among other things, that the time of subscribing there should be paid upon each share $5, and that the balance should be secured by indorsed notes, payable on demand, or by other property or stocks, to be approved.

These provisions being applicable only to an original subscription for stock, it becomes necessary to see whether the note in question was given upon such a subscription. To ascertain this it is unnecessary to notice the history of the company prior to 1842. In that year, the company being then in full operation with a capital of $300,000, the amount authorized by its charter, the board of directors met and resolved that any stockholders, indebted to the company on stock notes might have the privilege of paying any part or all of such indebtedness in the capital stock of the company, at a rate specified in the resolution.

Under this authority, stock was surrendered or transferred to the company, in payment of notes, to the amount of $133,000. There seems to be no ground for questioning the validity of this transaction. I am not aware of any common law principle which forbids it, nor is it shown to have been in contravention of any provision of the charter of the company, or any other of the statutes of Ohio. In the case of Taylor *vs.* The Miami Exporting Company, it was held that a bank might receive its own stock in payment of a debt, and might hold it as it did its other corporate property.

The subsequent resolutions of the board of directors of the Insurance company, viz: that of May 22, 1849, by which it was resolved to increase the capital stock of the company in the sum of $50,000, and to receive subscriptions for that amount, and that of August 13th, 1849, authorizing similar subscriptions to the amount of $90,000, are to be construed with reference to the circumstances under which they were adopted. As previous to the transfer of the $133,000 of stock to the company, in payment of stock notes, the full amount of stock authorized by the charter had been issued, neither the directors nor stockholders of the company had power to add to that amount. The directors may have supposed that the stock transferred under the resolution of 1842 became *ipso facto* extinguished, and that the capital of the company was thereby *pro tanto* diminished; but I do not regard that as the necessary consequence of the transfer. It might or might not have that effect, at the option of the company, and would require, I think, some manifestation of such an intent to produce that result. As nothing of this kind was shown, it follows that there was no authority for the issue of any new stock. I see nothing, however, to prevent the re-issue and sale by the company of the stock so transferred; and, in absence of any proof to the contrary, the presumption is, that the directors intended to act within the scope of their powers, by selling the stock on hand, instead of issuing new stock, which they had no power to create. The terms used in the resolution are by no means conclusive as to the intent of the directors. They may have adopted the form of a subscription as the best mode of obtaining purchasers for the stock transferred to and held by the company, and there is no positive evidence to conflict with such an inference. All the stock issued to the new subscribers, therefore, should I think, be deemed a part of the stock so held. This conclusion disposes of several of the points raised by the defendants counsel. It shows that the requirements of the charter in reference to the original subscriptions have no application to the case. The directors needed no special authority to enable them to transfer the stock. It was clearly within the scope of their powers as the managing officers of the company. There was, therefore, a sufficient consideration for the note.

Niagara Falls Suspension Bridge.

Report of JOHN A. ROEBLING *on Its Condition, on the 1st of August*, 1860.

After an absence of two years, I have again visited the Niagara Railway Suspension Bridge, and have during a stay of three days, on the 18th, 19th and 20th of July, made a thorough examination of the work. I now present to you the following report:

The Niagara Bridge was opened for railway traffic on the 18th of March, 1855; the lower floor for common travel was completed and in use the year previous. The number of trains and trips of single engines, which at the present time pass over the Bridge in twenty-four hours, averages about forty-five. This great traffic accounts for the rapid wear of the rails, many of which require renewal.

After a thorough examination of all parts of the work, I am unable to report any change.

The camber of the floors and the deflection of the cables, as you well know, depend upon the temperature of the atmosphere. The relative level of the floors is the same as it was in 1855.

In order to be better enabled to judge whether the stiffness of the superstructure has been impaired by a five years' traffic, I placed a leveling instrument between the towers on the New York side, and observed the process of gradual deflection caused by five trains.

A train, composed of the engine "Essex," and tender, of 35 tons weight, drawing 10 empty cars, produced a deflection in the centre of	0,462 feet.
A small engine, drawing 2 loaded passenger cars, 1 baggage car and 1 loaded cattle car	0,540 "
Another light engine with 5 loaded passenger cars and 1 baggage car	0,520 "
The engine "Essex" and tender alone	0,315 "
The same engine returning with 8 loaded cattle cars, each holding 17 to 18 cattle of the largest size	0,789 "

A short, but heavy train, such as the last, when in the centre of the bridge between the stays, produces the greatest deflection, comparatively. A longer train, loaded at the same rate and extending over the limits of the stays, deflects the work but little more. In proportion, as the ends of the floor are weighed down, the centre is kept up. By comparing the above observations with those of 1855, we discover no essential difference. The great experimental train, which covered the whole bridge with loaded cars, propelled by two engines, produced a deflection of ten inches. A similar train passed over now will do the same.

The extreme rise and fall of the floor, owing to the contraction and expansion of the cables, amounts to more than two feet. But the cables being at liberty to contract and expand, this process can never affect their strength.

In my report of 1855 I stated the aggregate ultimate strength of the four suspension cables at	12,000 tons.
Perman't weight, supported by cables.	1,000 "
Tension resulting	1,810 "
Proportion of permanent tension of strength	1:6.63
Tension produced by a train of 250 tons	452 "
Aggregate tension	2,262 "
Proport'n of work'g tension to str'gth.	1:5.30

This liberal allowance of strength and freedom from vibration will insure the durability of the cables.

* * * * * * *

The woodwork of the Niagara Bridge, being kept well painted and otherwise well-protected, will last for forty years and more. The old wooden St. Clair Bridge, at Pittsburg, Pa., which I removed to make room for a new Suspension Bridge, recently completed, has stood exactly forty years. All its principal timbers of pine and oak, on removal, were found good and sound. A portion of this material, after being well tarred, has gone into the new suspension floor, and will no doubt render good service for another forty years.

My views of the durability of the cables have undergone no change since 1855; they have only been strengthened by additional experience. This being a subject of great importance and of general interest, I embrace this opportunity to express myself more fully, and thus perhaps to contribute towards a better understanding of the nature of iron.

This fact is well known that wrought iron under certain conditions will undergo certain radical changes. And so will all kinds of matter. The material universe is not by any means constituted upon the principle of *immutability*. Material existence is but a theatre of change, of breaking down, of reduction and of reconstruction of the elements of matter. The Egyptian pyramids are even now undergoing a slow process of disintegration. The dry air of that region, slow in action, is still sure to do its appointed work. And as all human fabrics being but material constructions, will have to succumb to the same inexorable law, we cannot expect that the Niagara Bridge will form an exception.

Two kinds of changes are known, which will affect the strength of iron and other metals. The one is wrought by the chemical process of oxidation, and can be guarded against effectually, and is so guarded in the Niagara Bridge. All iron and wire within reach are kept well painted, and thus preserved against rust. The anchor chains and their connections with the cables, inside of the anchor masonry and in the rock below, after three coats of paint, are protected by the cement grout, which forms a solid envelope, excluding air and moisture.

But aside from the mechanical protection thus afforded, I depend principally, as was explained in my report of 1855, upon the well known chemical action of calcareous cements in contact with iron. Oxygen has a greater affinity for lime than iron. So long, therefore, as the cement will combine with oxygen, or in other words, has not become completely crystalized, which is a very slow process inside of heavy masonary, the iron will be protected. The cement, not exposed to the air, when setting slowly, has a tendency rather to expand than to contract; but suppose there should be cracks around the anchor bars, large enough to admit air and moisture. Water will then find its way through those cracks, but on reaching the iron, will be more or less impregnated with cement and thus add another protecting coat. The chemical principle, which I have explained here, I apply daily in my factory for the preservation of wire against dampness. I have also carried on direct experiments for a number of years, which have convinced me of the preserving property of calcareous cements in damp situations.

* * * * * * *

But iron under certain conditions will undergo another change, which is not so well understood, and is indeed as yet a partial mystery. And this fact has been seized upon as an invincible argument against iron bridges generally, and against the Niagara Bridge especially. I refer to the supposed and popularly so-called *granulation* of fibrous wrought iron.

Although this subject has engaged my attention for a series of years, and I have taken pains to obtain correct information, I yet hesitate to express any decided opinions, that would cover the whole field of investigation. The question at large I consider open yet. This much only I believe to be settled, that good iron will undergo no change in course of time, unless it is acted on by great heat, or is under the influence of strong continuous vibrations under tension.

As an exception to this last proposition, may be cited the case of old anchors and chains, which, after being exposed on the ground or in the ground, a great length of time, had become considerably rusted and reduced in strength. Aside from rusting, magnetic influences were supposed to have been at work in destroying the strength of these irons. But it should be remarked, that none of these cases have been sufficiently well examined to warrant sound conclusions. It is true, that the earth forms a great magnet, whose magnetism is maintained by the sun; and that the magnetic condition of all metals is more or less depending upon the great parent magnet. A steel magnet, that has lost its power or tension, when buried in the earth, will be restored by its magnetic currents. But how far the cohesion and elasticity of wrought iron may be affected by these currents, we are yet ignorant of. When a bar of iron is drawn apart by a tensile strain, the fractured ends are magnetically excited, and will attract iron filings, at the same time that they become heated. Both phenomena, magnetism as well as heat, will always accompany the forcible rupture of iron, as can be readily ascertained by experiment. The same phenomena are also exhibited when iron is hammered cold, the heat in this case being more apparent than the magnetism. .

The cohesion and elasticity of wrought iron, although different properties, appear to be closely related. In speaking of elasticity, I mean the natural elasticity, and not what is produced by the forced process of tempering. And here may be pointed out a marked, physical difference between steel and iron. While the hardening or tempering of steel can be carried to almost any degree, that of the latter cannot.

Whatever destroys or impairs the elasticity of iron or steel, will also affect its cohesion. And this fact has also a significant magnetic bearing. Tempered or hardened steel possesses more tensile strength than soft steel. Now when tempered steel looses its hardness by annealing, it assimilates nearer to soft iron in its relation to magetism. Red-hot iron is not attracted by a magnet, while a steel magnet entirely looses its magnetic properties on being heated red-hot. Another remarkable fact is, that artificial as well as natural magnets, when *overloaded*, become weakened. And so does the cohesion and elasticity of an iron or steel bar become weakened by overloading.

The limit of elasticity, or of the *recuperating* force, as it might be termed, of iron and steel is generally stated at one-third of their ultimate strength. I am of the opinion, that this is much *over*-estimated for soft puddled iron, and *under*-estimated for good hammered charcoal irons, and still more for steel.

* * * * * * *

The opinion prevails that a well drawn out fibre is the only sure sign of tensile strength. This, however, is true only when applied to *ordinary* qualities of bar or rail iron. The fact is different with good charcoal irons and with steel. The greatest cohesion is accompanied by a fine close-grained uniform appearance of texture, which, under a magnifying glass, exhibits fibre. The color is a silvery lustre free from dark specks. The finer and more closely-grained the texture, the nearer the iron approaches to steel. Those who are familiar with good Swedish or Norway irons, will support these statements. These facts alone should be sufficient to disprove the erroneous notion that good iron and steel, which should always be granular, will become so only by vibration, and will thereby lose their strength. But it is important to keep in mind the distinction between a fine uniform granular fracture, and a coarse crystaline fracture. Where coarse crystalization appears, there is a want of contact and compactness, consequently of cohesion and strength generally.

Wire cables, car-axles, piston-rods, connecting-rods, and all such pieces of machinery, which are exposed to great tension as well as torsion and vibration, should be manufactured of iron which not only possesses great cohesion, but also a high degree of hardness and elasticity. The best car-axles now in use, are those made of soft steel by Krupp, in Germany. This steel is manufactured from the spathic ore or natural steel ore, of the celebrated mines at Muessen in Siegen, Prussia. A correct report on these axles was given to me by one of the Prussian Commissioners of Railways, in whose district Krupp's works are located. They are safe in cold weather and seldom known to break. This proves that soft steel with more of a granular texture than fibre, possesses a much greater elasticity and strength than the best fibrous iron; and it also furnishes another strong proof against the granulation theory, so much credited in this country.

* * * * * * *

The capacity of iron to resist vibration and tension differs much in different qualities, and still greater is this difference when the irons are exposed to a very cold temperature. The tubular bridge at Montreal will not last as long as one in Great Britain of the same dimensions, material and workmanship, and rendering the same service; and still less than the tubes over the Nile in Egypt. One hard winter in Canada will be as trying to the structure as ten years are in Great Britain.

In order to examine the fitness of various qualities of iron for the manufacture of wire rope, I undertook, during the hard winter of 1856, at my establishment at Trenton, a series of experiments, when the thermometer was five to ten degrees below zero. The samples for testing, about one foot long, were reduced in the centre to exactly three-quarters of an inch square, and their ends left larger, were welded to heavy eyes, making in all a bar of three feet long. Thus prepared, they were thrown outside the mill, covered with snow and ice, and left exposed for several days and nights. Early in the morning, before the air grew warmer, a sample, enclosed in ice, would be put into the testing machine, and at once subjected to a strain of 26,000 pounds, the bar being suspended in a vertical position, left free all around. A stout mill hand, armed with a billet of one and a half inch in diameter and two feet long, then struck the sample horizontally a number of blows, hitting the reduced section as hard as he could. The blows were counted and continued until rupture took place. Care was taken to maintain a tension of twenty-six thousand pounds during this test, by screwing up the lever, while the sample kept stretching. Other means for producing vibration were attempted, but none proved so effective as the hitting with an iron bolt. I would remark here, that most of these irons would support from seventy to eighty thousand pounds per square inch; and that good samples of three-quarters of an inch square, would support a strain of twenty-six thousand pounds for a whole week, with no visible stretching, provided all vibration and jarring was avoided. But the least jar would produce a permanent elongation.

Without going into the details of these interesting and instructive experiments, I will only state that the number of blows which the different samples resisted, when encased in ice, ranged from three to one hundred and twenty. Inferior qualities of a crystaline texture would break at the third or fourth blow. Good samples of refined puddled bar resisted very well, and went up to sixty blows, while the better qualities of hammered charcoal irons, supported up to one hundred and twenty blows, stretching and drawing all the time. Indeed, it seemed a wire-drawing process on a rough scale. On the tension being reduced to twenty thousand pounds, some good samples resisted the almost incredible number of three hundred blows, before breaking.

Such qualities of iron may be depended upon for the construction of wire-cables and car-axles. They will be safe at the North Pole, while inferior qualities may answer very well in warmer latitudes.

* * * * * * *

All irons form alloys of pure iron, mixed with

carbon and other impurities. A certain amount of impurities in the shape of good cinder appears to be necessary to impart strength and cohesion to this metal, and also to make it malleable, and to give it welding properties. The purer the iron is, the higher the heat at which it will weld. Compare for instance good Swedish iron with common puddled bar. While the latter will weld at a low heat, the former requires a much higher heat. Compare their fracture and color. The good Swedish bar will exhibit either a fine granular appearance or fibre, accompanied by a silvery lustre, showing comparative purity; the puddled bar will be of a dark color, with a graphit lustre, and will show a coarse texture or loose fibre.

During the process of puddling, as well as of blooming, the melted pig-iron is mixed with cinder, and this mixture, which will adhere by cohesion, prevents the formation of large crystals, which is the tendency of pure iron in a molten state. Now by working (bringing to *nature*, as the puddler calls it,) this mixing and crystalization is promoted. The subsequent squeezing and rolling of the puddled ball, or the hammering and shingling of the bloom, will have the effect of condensing, laminating, reducing and drawing out these crystals, at the same time removing and squeezing out the superabundant cinder from between the metallic crystals. Thus the drawn out fibre is composed of an aggregate of pure iron threads and leaves, enveloped in cinder.

Pure iron as well as very impure iron is weak; the maximum strength and toughness is obtained by a certain mixture of pure iron with carbon and cinder, thorough worked and incorporated. When the fibrous and laminar aggregation becomes so dense as to be fit for the manufacture of steel, then are by this very process sufficient impurities expelled, and the greatest degree of cohesion is obtained. Hence strong steel can only be made of strong iron, no matter what chemicals may be administered during the process.

Keeping the above process before our mind, we may now understand why even the best fibrous wrought iron, when exposed to long continued vibration under tension, or to tortion, bending or twisting, must inevitably become brittle, b*ecause the iron threads and laminæ become loosened in their cinder envelopes.* But the cohesion between the iron and its cinder once destroyed, and its strength is gone. Now whether cohesion is the result of magnetic attraction (according to Fraday,) or otherwise, this process appears to be purely mechanical. But let the explanation, which is here offered, be correct or not, the fact remains that fibrous iron and all kinds of iron and steel, will be rendered brittle by vibration and tension, or by bending and twisting, *without* undergoing any mysterious change in its molecular arrangement.

It is only within the last hundred years that wrought-iron has become a *necessity* on public and private works. Large structures, entirely composed of iron, are of a still more recent date. Long experience on a large scale is therefore wanting. But as far as it goes, the opinion is fully sustained that good iron, not overtaxed by tension and vibration, and otherwise preserved, will prove of the most durable building materials at our disposal.

The Menai Chain Suspension Bridge has now stood about thirty-six years, and is still considered a safe work, although it has, for the want of stiffness, on several occasions, suffered severely from gales. The old Wire Suspension Bridge, at Friburg, in Switzerland, has been in use about twenty-seven years, but it does not possess enough of strength and stiffness to guarantee its safety much longer in its present state.

It should be remembered that there are many suspension bridges in this country, as well as in Europe, built without any regard to stiffness, and are therefore constantly subjected to vibration, which must greatly limit their durability.

The cables of the Niagara Bridge, on the other hand, are free from vibration, consequently will last as long as the nature of good wrought-iron will permit, when subjected to a moderate tension, not exceeding one-fifth of its ultimate strength. This durability I am unwilling to estimate at less than several hundred years.

Morris (N. J.) Canal.

This canal extends from the Delaware river at Easton to the Hudson river at Jersey City, opposite New York, 102 miles. The Lehigh coal trade enters the canal at Port Delaware, in the borough of Philipsburg, partly by canal and partly by railroad. That by canal is locked from the Lehigh canal into the Delaware river, and crosses the river by a rope ferry, and leaves the river by an inclined plane, 35 feet high.

The track of the Belvidere Delaware Railroad passes over this plane on a bridge, and the track of the Lehigh Valley Railroad passes over that bridge on another bridge, making three rail tracks precisely at the same point, one above another, having the appearance of three stories. It frequently happens that a canal boat on the plane, and a coal train on each of the roads, are all in motion at the same instant, and at the same vertical point, and diverging from that point, each to pursue its own appropriate line of communication to the seaboard, or the city of New York. At the head of the inclined plane is a large shipping basin connected with the Lehigh Valley Railroad, by a branch railroad, provided with coal shutes for shipping coal directly from the Lehigh Valley Railroad into boats at this point.

Two miles from Port Delaware are the three furnaces of the Trenton Iron Company, known as Peter Cooper's furnaces, which consume about 30,000 tons of coal per annum, and give employment to 500 men. At this point the canal leaves the Delaware river and ascends the valley of a mill stream called the Lopatcong, passing a village called Green's Mills, also several locks and planes, to Port Warren, a small village at the foot of plane nine, west. This is a double track plane, 100 feet high and 1,600 feet long, and passes a boat in each direction at the same time, and occupies less than five minutes in making the passage. All the planes are operated by water power, and at this plane the water is used under a vertical head of 55 feet. This plane brings the canal upon the table land between the valley of the Lopatcong and of another mill stream called the Pohatcong. Crossing this table land and continuing up the valley of the Pohatcong, the canal passes the villages of Stewartsville, New Village and Broadway, and reaching the foot of plane seven, west, it mounts in one lift 73 feet, to the high table land between the Pohatcong, and the valley of the Musconetcong river. Near the head of this plane is the beautiful village of Washington, and in this village the railroad of the Delaware, Lackawanna and Western Railroad Company crosses the canal at an elevation just right to allow an easy shipment of coal into boats. This company has erected at this point extensive coal shutes and other fixtures for shipping coal and other freight from the railroad to the canal and from the canal to the railroad. This is near the village of Oxford and the old furnaces known as the Oxford furnaces.

The coal brought to the canal at this point is from the Wyoming Valley, and is known as Scranton coal. The amount is about one-third of all the coal carried on the canal. From Washington the canal passes up the valley of the Musconetcong through the villages of Port Colden and Port Murray to the city of Hacketstown, and thence still along the same valley until it comes upon the level of the waters of the river, and forms a slack water navigation; thence leaving the valley of the river at the village of Waterloo, it mounts by a rapid succession of planes to the village of Stanhope, and thence through an artificial lake of 500 acres, used as a reservoir to feed the canal, and by aid of another plane, it reaches the summit level on the top of Schooley's mountain, having ascended 760 feet above the Delaware river at Easton, and being 914 feet above tide-water at Newark. At this point comes in the main feeder, from Lake Hopatcong. This is a natural lake of great depth, covering about 2,800 acres, and must be drawn down 12 feet to bring the surface up the lake on the same level as the surface of the water in the summit level of the canal. This reservoir feeds the canal westward to the Delaware river, and eastward 27 miles to the point where the feed is taken from another natural lake, called Greenwood Lake, which covers 2,500 acres, and can be drawn down about 12 feet. These lakes insure a full and even supply of water at all times, without the risk of any inconvenience to the navigation from drouths, however severe or protracted they may be.

There is a navigable feeder to the outlet of Lake Hopatcong, and a lift lock into the Lake, and a steam-tug on the Lake constantly towing the boats to and from the ore landings. From 30,000 to 40,000 tons of zinc ore, iron ore and Franklinite are shipped annually from this Lake. From the summit level the canal descends, by a succession of levels, as rapidly on the east side of the mountain as it ascended on the west side, till it reaches the village of Dover, a manufacturing town on the Rockaway river; thence, following the valley of this river four miles to another manufacturing town, called Rockaway, there descending another plane; and thence along the same valley four miles further, to another like town, called Powenville; and one mile further to the great nail works at the Boonton Falls, on the Rockaway river, known as Fuller, Lord & Co.'s Iron Works. These Iron Works embrace a blast furnace, rolling mills, and nail machines to make twelve hundred kegs of nails per day, and give employment to six hundred operatives. All the works are driven by water power, the water being taken from the river at the head of the falls, and discharged into the canal at the foot of plane 7, east. At this point the canal leaves the valley of the Rockaway river, passing down two more planes to the intermediate table lands between the valleys of the Rockaway and Pompton rivers, and crossing the Pompton river by an aqueduct, reaches the Passaic river at Little Falls on that river. The canal crosses this river below the Falls by a stone aqueduct, 60 feet span, and 60 feet above the water. Here are the extensive freestone quarries of New Jersey, so much noted for the fine texture of the stone. Trinity Church, New York city, is built with stone from these quarries. The Passaic river falls 50 feet at this point, giving a large water power, now partially used for manufacturing purposes. The canal continues down the river on the same level, through the city of Paterson, a purely manufacturing city, of 20,000 inhabitants—situated at the Great Falls (90 feet) on the Passaic river. All the water power is now used, and, in addition, steam power has been extensively introduced.

At the lower end of the 17 mile level on the canal is the village of Bloomfield, which is another extensive manufacturing town. Five miles from Bloomfield is the city of Newark, the largest city in the State. The canal runs nearly through the centre of the city, a distance of three miles, affording facilities for distributing coal at convenient points along the whole distance. Leaving Newark, the canal crosses the Passaic river, the horses crossing on a bridge and towing the boats across the river. The boats cross the Hackensack river in the same way.

On the east side of the Hackensack river, the company has erected a steam engine of 100 horse power, to drive a large wheel, by means of which one hundred thousand gallons of water is raised per minute from the Hackensack river into the canal, to insure a full supply of water at all times.

At Jersey City the company has erected extensive wharves, piers and basins, for the convenience of the trade of the canal, and particularly for the re-shipment of coal and iron.

From Washington to Powerville, a distance of over 40 miles, the canal passes through a region of country all the way interspersed with magnetic iron ore and limestone, presenting some of the best locations for blast furnaces now unoccupied in the country.

There are twenty-three inclined planes, eleven west of the summit and twelve east of the summit. The greatest elevation of any one is 100 feet, and the least is 85 feet, and the average sixty-three feet each. Experience has demonstrated that these are better than locks, because by them the

company annihilate lockage or elevation, making the practical effect the same as if the canal were level, because a mile of canal with a plane in it, is passed as quickly as a mile of level canal. There are twenty six lift locks on the whole line from Easton to Jersey City. The elevation between Lakes Erie and Ontario could be overcome by one plane, instead of the tortuous route and tedious lockage of the Welland Canal. We mention the fact simply to help forward a great national work, which must be done if the States are to retain the trade of the West. We are assured by most competent engineers, that a plain can be made that will pass any craft that will pass the Sault Ste. Marie Canal, or any craft that is engaged in the carrying trade on the Lakes, in half an hour, from the level of one Lake to the level of the other Lake, carrying the vessel all the way in water, and that this can be done for less than half the money that would be required to make locks for the same craft.—*Phila. Ledger.*

South-western (Ga.) Railroad.

The annual meeting of the stockholders of this company was held on the 9th ult., at which the report of the Directors was presented, showing the result of the operations of the road for fiscal year ending July 31, 1860. The net earnings during that time, after paying all ordinary and extraordinary expenses, amounted to.....$385,012 29
To which add premium and discount. 3,841 53

$388,853 82

Disbursed as follows:

Feb'y dividend, 4 per ct...	$93,424 00	
Interest on bonds.....	27,632 50	
Annuity to city of Macon.	1,250 00	
		122,306 50
		$266,547 32
Aug. divid'd, 4 per cent..	$116,876 00	
And an extra dividend of 5 per cent.	146,095 00	262,971 00
Leaving a surplus of.....		$3,576 82

The debt of the company is as follows:

1st. 7 per ct. bonds, endorsed by the Central Railroad and Banking Company, not convertible into stock, falling due in 1861		$47,000 00
Do., falling due in 1862....		55,000 00
		$102,000 00
2d. 7 per ct. bonds issued for the Americus extens'n, falling due in 1863....	$11,000	
Do., falling due in 1864.....	18,000	
Do. do. 1865.....	14,500	
		43,500 00
3d. 7 per cent. bonds issued for extens'n beyond Smithville, falling due in 1867.....	$1,000

Total funded debt.....		$396,500 00

The bonds of 2d class are convertible into stock, whenever demanded by the holders. Of the third class, there are convertible into stock, whenever demanded, $58,000; after June, 1861, $53,000; and after June, 1865, $140,000.

The current debt of the company, payable in cash, is small, being—

For balances due other companies.....		$6,080 70
Do.	of estimates not called for.	1,249 80
Do.	Dividends unclaimed.	4,588 00
Do.	Invoices of articles purch'd	5,500 00
Do.	due contractors	2,494 22
		$19,912 72

The funds of the company have been constantly loaned at 7 per cent. interest, secured by stocks. The balance called for by the Treasurer's statement is $308,469.14. It consists of money on hand and in Bank, $87,186.16, and bills receivable, $221,282.98. The whole of the bills receivable, except $6,994.55 will be paid, with interest due and to grow due thereon ($2,809.17) on the 15th of August, (the time at which the dividends declared are payable). The above $6,994.55 will be paid on the 1st December next. The interest made on loans amount to $72,350.10. On the 15th August, the amount will be $75,059.27. The money has been paid on the railroad, except $45,498,14, the balance in hand after paying the August dividends.

Four hundred tons of rails to continue relaying, have arrived. The cost of the same—about $20,000—will be payable in the course of the month. The balance of cash and bills receivable, after paying the dividends, $45,498.14, is ample to pay the current debt and the cost of the rails.

There being no longer any object in keeping the extension accounts separate in the books, the sum of $1,513,418.85—the cost of road, so far, beyond Smithville—has been added to the pre-existing account of cost of road and equipment, and hereafter the extension stock as well as the original stock will appear in one account.

The whole cost of the road and equipment to 31st July has been $3,770,425.34. This amount will be increased by the sum of $5,860.89, being for estimates not yet called for by contractors and by the further expenditures hereinafter shown.

When the last annual report was presented, the stock of the company was still selling under par. The Board did not suppose that the holders of bonds would, to any great extent, convert them into stock. The business of the company immediately after August, 1859, was very prosperous, and the stock went up rapidly in the market. The consequence of this was, that the holders of bonds converted them into stock rapidly. The amount of capital allowed by law is $3,500,000, and *now*, without the allowance by the Legislature of a further increase of capital, there cannot be a stock dividend. This will be made apparent.

The stock issued is....		$2,921,900 00
Stock due to contractors for work done....	85,961 91	
Yet to be issued to contractors.....	15,917 36	
There are bonds which can be converted into stock at the periods before stated	294,500 00	
		$3,318,279 27

That the road, with its equipment, is fully worth $4,000,000, and would pay dividends of *eight* per cent. per annum on that sum, with certainty, no one can reasonably doubt.

If the stockholders, at their next annual meeting, shall order the capital raised to four millions of dollars, and the Legislature shall allow the increase, a stock dividend, sufficient to cover what has been taken from profits of the road, can be made, with reliance upon dividends at the rate of eight per cent. per annum. The Board will apply to the Legislature for an increase of capital, and they do not apprehend that their request will be refused. But upon mature consideration of the subject, and after having consulted, informally, some of the large stockholders, they are, unanimously, of opinion that it will be best not to increase the capital by a stock dividend, even if we shall obtain the right to increase. They believe that regular semi-annual dividends of five per cent. can be made on a capital of $3,500,000, and think that the stock, on that basis, would be preferable to an eight per cent. stock on an increased capital. Considering the receipt by the stockholders of the extra 5 per cent. dividend, the Board is fully convinced that the true policy is now to keep the capital at $3,500,000—looking to dividends of ten per cent. But the Board will obey the instructions of the stockholders in this respect, if it shall be their pleasure to instruct.

Upon the conversion of the bonds of the company into stock and the issuing of stock to contractors, the capital stock will be $3,318,279.27. There are bonds not convertible into stock to the amount of $102,000—which must be paid in cash in 1861, 1862, but the Board desires to anticipate the payment of them. The Board has agreed to issue to the Central Railroad and Banking Company, one hundred thousand dollars of stock at par, and it is intended to apply the money to the payment of these bonds. The Central Company, besides endorsing this company's bonds to the amount of $210,000 without any commission or charge whatever, when we were about to extend our road beyond Smithville to the Chattahoochee, at the request of this company, passed a resolution to take one hundred thousand dollars of the stock of this company at par, whenever called on by this company to do so. At that time the stock of this company was under par. Without this assurance and support from the Central Company, the Board would not have undertaken to extend the road—thus supported and encouraged they did not hesitate to go on. This Board was glad of the opportunity, therefore, to show to the Central Company how highly the liberality of that company was esteemed, by granting them one hundred thousand dollars of stock at par, after the dividends of this day.

The Board indulged the hope of reporting at this time, the completion of the road and the settlement of the accounts for the same. There has been a little delay—which is satisfactorily explained by the Chief Engineer, who gives the assurance that the road will be opened to the river Chattahoochee, both at Fort Gaines and Eufaula, within thirty days.

There will be yet required, funds for the road, as shown by the Chief Engineer's report, to build the bridge at Eufaula and to finish entirely the road and depots, $233,294 14. This amount will be payable in Stock, Bonds and Cash, in the following proportions:

Stock..... ....$14,119 62		
Bonds	84,280 80	
Cash ....134,893 72—		$233,294 14

It has been shown above, that upon the conversion of the Bonds of the Company into stock, and upon the issuing of stock to contractors, the capital stock will be $3,318,279 27. Add to this, $100,000 to be issued to the Central Company, and the amount will be $3,418,279 27. There will be left a margin of stock yet to be disposed of, of $81,720 73. This stock can be sold at a premium, and the proceeds applied to the road, thus reducing the above amount of $233,294 14.$151,573 87
The bonds to be issued as above..... 84,280 80

Will reduce the amount to.....$67,292 57

Which can be raised at any moment, by a sale of bonds.

Then, at this period, the stock will be full..... ....$3,500,000 00	
And the bonds will be....	151,573 87
Making cap'l and b'd debt together.	$3,651,573 87

Upon this plan, the Bonds hereafter to be issued, *cannot be made convertible*, or the period of conversion must be postponed. The outstanding bonds which *can be converted* into stock *may not* be converted—nevertheless, the result will be as stated, that, at the close, if the estimates of the Chief Engineer, be sustained, the combined capital stock and debt will not exceed $3,651,573 87. In the judgment of the Board, the interest and dividend of *ten* per cent. per annum can be paid on that sum.

The account of profit and loss after the addition thereto of the surplus of $3,576 82, before shown, will be $358,555 85. The last mentioned sum shows the amount of earnings which, from time to time, (after paying dividends of 8 per cent. per annum) have been expended on the road and its equipments. There should be added thereto, the sum of $24,072 05—which heretofore has been carried to the credit of cost of road from forfeited stock, making $380,627 90. The opinion has been expressed, that the road would certainly pay

eight per cent. per annum, on a capital of $4,000,000, and that, upon an increase of capital being allowed by the Legislature, a stock dividend to the amount of near $400,000, could safely be made. If that plan were pursued, the item of "profit and loss" would be wiped out by the stock dividend.—Upon the plan recommended by the Board, the account of profit and loss must be closed by carrying the same to the credit of cost of road—reducing the cost so much. Then the Stockholders will be reimbursed for earnings which have gone into the road—by the holding of a ten per cent., instead of an 8 per cent. stock.

Chicago and Northwestern Railroad.

The first annual Report of this Company embraces a period of ten months to April 1, 1860. During five months of this time the business was conducted upon two disconnected portions of the road, trains not running over the completed road until Oct. 17 last, while during the other five months, from Nov. 1 to April 1, 1860, the road had nothing like a fair business, nor was it prepared to do it until the close of the Winter and the opening of the Spring. About the 1st of July the contractors commenced work on the road, and on the 6th of October following, the Company ran a train over the entire road, from Chicago to the City of Oshkosh, about 194 miles, having meanwhile built three large, substantial bridges over the Rock River, and completed 63 miles of road, including some six miles of side-track, and erected the necessary depot buildings and water stations on the new line of road.

Except for the delay in the arrival of iron, they would have been able to run over the entire road some fifteen days earlier than they did.

The moneys subscribed by bondholders for the completion of the road, to wit, ten per cent. upon all their bonds, and three-quarters of one per cent. for expenses of sale and re-organization, (including a debt due trustees, and incurred while operations on the road before sale,) have all been collected, with the exception of about $9,000. The sinking fund bonds to be issued, for which, however, the Company retain in hand until such payment is made.

The entire cost of the construction of the fifty-seven miles of new road, and of the additional six miles of side track up to April 1, 1860, the close of the fiscal year, including rights of way and depot buildings, as per the Secretary's annual statement, amounts to $532,304 67.

The earnings of the road from June 2, 1859, to April 1, 1860, about ten months, were	$384,659 15
The operating expenses in the same time were (or about 58 per cent. of the earnings)	222,586 78
Net earnings	$162,072 37

There was also expended for taxes, $11,093 44; for legal expenses, and profit and loss (loss of money by fire), $3,730; and on account of accident to excursion train 1st Nov., 1859, in rebuilding cars and expenses incidental, $7,428 29—making a total of $22,251 73.

Its earnings for March last were	$48,000 00
For April	51,000 00
And for May	62,000 00
For three months	$161,000 00

These earnings were made in a country suffering greatly from the late general depression, and especially from a total loss of its corn-crops last year, and a loss of a great part of its wheat and other crops. Such a degree of failure and destitution of all crops in this generally productive, rich, and beautiful country, never occurred as last year. On the other hand, such full promise of abundant and extensive crops, of every kind, this same region of country never presented, as at the present moment.

The present season has been an earlier and a finer one for the farmer on the line of this road, and in its entire vicinity, than any ever enjoyed by them.

They have had more than a month's extra time in which to prepare and sow their Spring crops, and have improved the opportunity well, and the breadth sown is estimated at nearly double that of any preceding crop.

If the present crop ripens well and is well harvested, of which there is now such good promise, then, with a fair and sufficient equipment, this road, it is estimated, will earn, from and after the 1st of August next, an average of $70,000 per month, equal to $840,000 per annum, or about $4,300 per mile per annum; and it would not surprise us, with a full crop and fair prices, if it exceeded this moderate estimate 10 or 20 per cent, and during the months of heavy business this Fall, the expenses will not probably exceed 40 per cent.

The funded debt of the road is as follows:

Sinking Fund 1st mtge. 7 per cent.	$1,250,000
General 1st mtge. 7 per cent	3,600,000
Second mtge. 6 per cent.	2,000
Depot mtge. 8 per cent.	245,000
Total	$7,095,000

The other liabilities of the Company, at the date of the report were $174,000, due to R. H. Winslow, which has been partly paid since, and which is offset by $150,000 of the Sinking Fund bonds pledged as collateral. The amount required to pay interest on the entire mortgage debt is $479,100, and according to the estimate of business in the report from August 1, the road will fully net that amount, and probably a handsome surplus. The coupons of the general 1st mortgage are funded to Feb. 1 next, and those of the 2d mortgage to May 1 next. The sinking fund coupons have been regularly paid in February and August since the bonds were issued.

Chartiers Valley Railroad.

A meeting of the friends of this road was held in Washington, Pa., on the 24th ult. The President, Hon. J. K. Morehead, submitted a statement of the condition of the road, and the plan by which he expects to hasten its completion. The Washington *Reporter* says:

All that is required to complete the road is $100,000, of which the President agrees to raise $70,000 in Alleghany, provided the remaining $30,000 of stock be taken by Washington county. The money will not be required to be paid unless the whole amount is raised. The subscription proposed will be *preferred* stock, bearing an interest of 8 *per cent.* and therefore no one can lose by any sum he may subscribe. The President will subscribe $10,000. Such is his confidence in its being a paying road to the preferred stockholders.

The Pennsylvania Transportation Company is willing to pay an annual rent of 40 per cent. per annum, (which will be equal to $72,000 annually,) for twenty years, and put the road in first class order, equal to any road in the country. There will be two daily passenger trains from Pittsburg to Wheeling, and an accommodation train to each of these places, and two daily freight trains. The Hempfield Road will be leased by the same company.

Wealth and Taxation in Great Britian.

Recent official tables show three general results: First, that the burden of taxation in England is unfairly borne by the working classes. Secondly, that the taxation of or duty upon the necessaries of life forms too large a portion of the public revenue. Thirdly, that the burden of taxation per capita, has gradually fallen from seventy-four shillings to forty-five shillings per annum.

First, as to Custom duties. The working classes, it is ascertained, pay over seven millions sterling on three articles, Tea, Sugar, and Tobacco, while the upper classes pay on the same articles a fraction over two millions.

Thus, on Tobacco, the gross duty levied was £5,500,000, an article which enters largely into consumption among the poorer classes, who contribute forty per cent. of the aggregate duty.

The proportion of tax upon each person, at different periods, would seem to have been as follows:

Year.	Population.	Taxes.	Tax per head. Shillings.
1810	17,000,000	£57,000,000	67.1
1820	20,000,000	74,000,000	74
1830	22,500,000	58,000,000	51.6
1840	25,500,000	51,000,000	40 9
1850	25,000,000	55,000,000	40.8
1859	29,000,000	66,000,000	42

The increased wealth of Great Britian in the same time furnishes a more equitable basis of taxation. For instance, one per cent. upon the property of the country would produce sixty millions sterling, which is about the ordinary annual expenditure.

The additions to the aggregate wealth of the country are indicated by the following summary:

Year.	Population.	Estimated Wealth.	Wealth per head.
1801	£16,000,000	£1,800,000,000	£112
1811	18,000,000	2,100,000,000	116
1841	27,000,000	4,000,000,000	150
1859	29,000,000	6,000,000,000	206

By removing or reducing the tax or duty on tobacco, this article would be more freely used among the people, and the tax upon property, real and personal, might with equity be enlarged.

Sleeping Car on the New York and Erie R. R.

The following description of a newly invented Sleeping Car, which the New York and Erie Railroad Company have recently placed on their road, is from the N. Y. *Tribune:*

The entire length of the car, including the platform, is 65 feet, and it is 11 feet wide, and 8 feet high. It has seats for sixty passengers, which can be readily changed into double or single berths to accommodate fifty-two sleepers. The wood work of the seats is St. Domingo mahogany; the back and cushions of the seats are covered with royal purple plush, and the berths are inclosed with satin damask curtains falling to the floor. The aisle between the seats is covered with Brussels carpet, and the lamps, upholstery, &c., are in keeping with the general fitting up of the car. At each end of the car are wash-rooms, supplied with marble basins, and every necessary convenience for the toilet.

Near these rooms heaters are placed, which, by a patented arrangement, throw the heat equally over the car and through a window into the wash-rooms, keeping the water from freezing in the coldest weather. The ventilating apparatus is of the most perfect character. A body of water under the car is forced up on either side into a recess, where it breaks like the spray of a fountain, falling back into the reservoir. The air entering the car passes through this water, being cooled and purified from all dust, and finds its entrance through ventilators along the aisles between the seats. This creates a current from the centre outward, which prevents the entrance of dust, cinders, or smoke, through the open winders, and

drives out all impurities of the vitiated atmosphere. The planning and building of this car was under the direct supervision of Mr. H. J. SWEETSER, Division-Superintendent. The cost of the car was $8,000.

New York and Erie Railroad.

As we near the first of September much interest is felt as to the measures which may be adopted to restore the credit of the Erie Railroad Company. It was understood when the decree of foreclosure under the fifth mortgage appeared, some time since, that the management had effected arrangements for paying off the second mortgage bondholders. On the first of September the interest on these bonds falls due, and it is expected that that time will be selected as the most convenient opportunity for reimbursing the principal, at least such an intention is implied in the large purchases of the bonds at 102a102½ by parties who are supposed to be well informed.

The silence of the company on the subject very naturally excites remark in some quarters; but enough is known to encourage the expectation of a speedy removal of this, as well as of all obstacles standing in the way of an unconditional release of the concern from the court, and a harmonious transfer of the road, on the 20th of November next, to the new Erie Company, agreeably with the acts of the New York, New Jersey and Pennsylvania Legislatures.

The future of the Erie Railroad, with this successfully accomplished, seems brighter than ever before, and its new start under the cheering auspices seen on all sides will mark a new era in the railroad history of the country, not less important in its bearings than that which followed the downfall of the concern in 1856 and '7. The company will enter upon 1861 with a clean balance sheet, for by that time all floating obligations will be paid; this, we understand, being the first consideration after the adjustment of the second mortgage.

At some time within the next sixty or ninety days interest payment will probably be resumed on the back coupons of the mortgage issues in default since the receiver took possession of the road, on the 9th of August, 1859. The interest account on all the mortgage issues will stand the 1st proximo as follows:

1st mortgage	..	2⅓	per c't.	accrued	Sep. 1st,	1860
2d "	..	3½	"	"	"	"
3d "	.	10½	"	"	"	"
4th "	.	99.10	"	"	"	"
5th "	..	8¾	"	"	"	"

The total amount of mortgage bonds, as per Receiver's books, 15th August, 1859, was:

			Int. payable.
1st mtg.	$3,000,000,	due 1867.	1st May & 1st Nov.
2d "	4,000,000,	due 1859.	1st Mar. & 1st Sept.
3d "	6,000,000,	due 1883.	1st Mar. & 1st Sept.
4th "	3,705,000,	due 1880.	1st April & 1st Oct.
5th "	1,253,500,	due 1888.	1st June & 1st Dec.

$17,958,500 total.

The unsecured bonds, in accordance with the terms of the re-organization plan, are to be converted into preferred stock, thus leaving the bonded debt of the new company, upon which interest accrues, about $18,000,000 as above, a reduction of nearly $7,000,000. On this basis the account of the company the next fiscal year, commencing with October 1st, 1860, with gross earnings of $6,000,000, which is the estimate of those most familiar with the prospects of the line, would stand as follows:

Receipts from October 1st, 1860, to October 1st, 1861		$6,000,000
Operating expenses, 55 per cent.		3,300,000
Net earnings		$2,700,000
Int. 7 per c't. on $18,000,000.	$1,260,000	
Preferred stock, 7 per cent. on $11,000,000	770,000	2,030,000
Leaving to common stock		$670,000

The expenses are estimated at 55 per cent. which is above the rate of 1856, when the receipts reached $6,350,000. With this large volume of business the coming year the advantages of the Long Dock Improvement over the unwieldy transportation arrangements with the Piermont terminus, will be sensibly felt, so that 55 per cent, expenses is more likely to be above than below the correct amount. The Long Dock Improvement it is expected will be in successful operation by the middle of November.—*Evening Post.*

Mississippi and Missouri Railroad.

The Mississippi and Missouri Railroad is making steady and sure progress westward. The track is laid several miles west of Iowa City, and the contractor gives assurance that it will be opened to Marengo, thirty miles west of Iowa City, by the middle of September. This town is surrounded by a rich and populous portion of the State, and the opening of the road to that point will add largely to its business. The rolling stock of the line we learn is already taxed to its uttermost capacity, and the strife for cars at the different stations, to market the accumulating proceeds of the abundant harvest, has become active and interesting. Time and energy will furnish a satisfactory solution to these slight troubles. The next section of the road, thirty miles between Marengo and Grinnell, is mostly graded, and a large amount of ties are already delivered. It will be completed early in the Winter or Spring of 1861. Grinnell is 115 miles west of the Mississippi, leaving, when the road reaches that point, only about 200 miles more to complete it to the Missouri. The importance of the line to our city, and to the country through which it passes ought to secure its completion early in 1862. It could be done if the money could be provided, within the next six months.

The amount of business that the road will command will astonish its most sanguine friends. Besides the trade, it would attract from Kansas, Nebraska, and the Upper Missouri, there are 30,000 people at Pike's Peak, who would contribute very largely to its traffic. The entire country west of the Mississippi is settling very rapidly, and the direct connection with Chicago and the seaboard which this road would afford, would both accelarate the development of that vast fertile region, and secure for our city, the Rock Island Railroad, and the roads connecting with it from the East, a largely increasing and lucrative business. On every account, therefore, it is very important that this line, connecting as it will with the Great Central Pacific Railroad, should be completed at the earliest day possible.—*Chicago Press.*

Illinois River Railroad.

This road is now completed from Pekin, on the Illinois River, to Virginia, Cass County, a distance of fifty-eight miles. A train of platform cars runs daily over the entire line of road, and is doing considerable business in the way of carrying freight. It is expected that by the first of next week a passenger train will be placed upon the road. We are informed that negotiations are on foot which it is hoped will result in the completion of the bridge over the Illinois River at Pekin and the building of the track from that point to Peoria, within the next sixty or ninety days. For the present, a steam packet plies between Peoria and Pekin, running in connection with the trains on the Bureau Valley Road. The Illinois River Road is to be operated by the Chicago and Rock Island Company, and when completed, trains will run through from Chicago to its southern terminus. It will prove a valuable feeder to that road, and contribute not a little to the rapidly growing commerce of our city.

The public are mainly indebted to the untiring energy and business tact of Hon. R. S. Thomas, of Cass County, President of the road, for the opening of this important thoroughfare. The road has been built during a period of unparalleled financial pressure, and in the face of obstacles and discouragements that would have induced almost any other man to abandon the work in despair. On more than one occasion he saved the road by a pledge of his individual credit. The result is no less creditable to his energy and public spirit than to his clear-headed business tact and sagacity.—*Chicago Tribune, Aug.* 13.

General Railroad Intelligence.

We learn that the present Governor of Massachusetts, Hon. NATHANIEL P. BANKS, has been tendered the appointment of Vice-President and resident Manager, in Illinois, of the Illinois Central Railway, made vacant by the recent resignation of Capt. GEORGE MCLELLAND. And the probability is that Gov. BANKS will remove to Chicago at the close of his present term of office in Massachusetts, and accept the new appointment.

Mr. MCLELLAND will immediately take the position of President of the Eastern Division, and Superintendent of the whole line of the Ohio and Mississippi Railroad. Mr. McL. has been connected with the Illinois Central Railway for some time as Vice-President, and is a practical railroad man.

Dr. Jeptha Fowlkes, Gen. C. B. Stuart, Major E. A. Blanch, and Messrs. DeGraffe and Smith, the managers in the prosecution of the work on the Southern Pacific Railroad, have arrived at Marshall, and have perfected arrangements for a vigorous prosecution of the work. Under their contract, Messrs. DeGraffe and Smith are to have fifty miles of the road completed in fifteen months. In order to accomplish this, the road will be divided into sections and sub-let to planters.

W. A. DUDLEY, Esq., the Commissioner who sold the Covington and Lexington Railroad, gives notice that the holders of unpaid coupons due before September, 1858, must present them to him for payment before the 1st day of February next, or no payment will be made on them. The second instalment of the purchase money of the road will be due October 5, when the Commissioner will be ready to pay the coupons of the second mortgage bonds due March, 1859, and the coupons of the preferred thirds, due December, 1858, as well as a second instalment on the preferred incomes.

It is stated that the Board of Directors of the Bellefointaine line have declined to accept the resignation of Mr. JOHN BROUGH, as President. This, of course, settles the question of his accepting the Presidency of the Marietta and Cincinnati Company, which had been tendered him by the Trustees.

The Chicago *Press* states that arrangements have been made for the completion of the Sterling and Rock Island Railroad within the next six or eight weeks. Five hundred tons of the iron are already at Chicago, and will be forwarded to their destination. The four thousand tons of iron necessary for the entire road are all purchased, and will be delivered as fast as it can be laid. The ties are nearly all delivered, and the grading and bridging are about finished. The managers mean to have it done in time to bring the crops along the line of the road.

The Oswego and Syracuse Railroad has declared a semi-annual dividend of three per cent. The Oswego *Times* says that "probably at no previous time has the Oswego and Syracuse Railroad been more prosperous than during this summer and up to the present time. Its freighting business has been heavy, and the travel more than proportionately large."

The proposed South Amboy and Woodbridge Railroad is now advancing, and the right of way through Perth Amboy has been obtained. When five thousand dollars additional stock is subscribed the New Jersey Railroad will commence building the road, and it will be completed in four months.

The September interest on the bonds of the Rome and Watertown road will be paid, on the 1st inst., at the People's Bank in this city, and also the principal of the bonds falling due at that time. This company have always met their bonds and interest at maturity. The early classes of their bonds are now maturing annually and promptly paid. Their long bonds, due in 1860, are also being gradually paid off by a fixed annual contribution to the Sinking Fund sufficient to pay the entire issue at maturity—the fund being regularly invested in the purchase of that class of bonds.

W. H. WARD, Esq., of Auburn, N. Y., has received instructions from the English Admiralty to carry out a final series of experiments at Woolwich dockyard with his improved system of ocean telegraph signals, preparatory to its adoption in the royal navy. Mr. Ward's system has already been recognized by the Emperor of the French and the United States Government.

Atlantic and Great Western Railroad.

This road, which is destined to become one of the great through lines of the continent, has been completed from its junction with the New York and Erie Railroad at Little Valley to Jamestown, and the occasion been celebrated with all becoming enthusiasm. From an account of the enterprise published in the Jamestown *Journal* of the 25th ult., we take the following details of its history and progress:

"This great enterprise, which has for a decade of years absorbed the interest of capitalists and commercial men, as well as the business public, both east and west, and which in its vastness of design unites the valley of the Mississippi (and ultimately the Pacific slope) to the great emporium of the Atlantic shore, has reached a stage of its completion that assures its speedy and indisputable success. Its line traverses the very gardens of the States, the central region through Pennsylvania, Ohio and Indiana, so well known to producers and buyers as the great market ground between the lakes and the gulf states, and it will, when completed, be the grand artery of commerce and travel through the country.

On the 6th day of April last the negotiations which had been for some time going on between the Erie and New York City Railroad, and the Atlantic and Great Western Railroad Company, were brought to a close satisfactory to all the parties in interest. The result was the adoption by the latter company of thirty-eight miles of the Erie and New York City Railroad line. The principal part of the work done upon this thirty-eight miles was in grading.

On the 26th of the same month the engineers of the new company placed their instruments upon the line for the first time, and about the first of May the contractors and engineer corps commenced operations at the junction with the New York and Erie Railroad, near Little Valley.

On the 3d day of July the iron was laid down to Randolph, sixteen miles from the New York and Erie Junction. The subsequent progress has been more speedy, as larger forces of men have been employed on the work.

The Atlantic and Great Western Railroad has run its first train of cars into Jamestown, opening thirty-three miles of this great thoroughfare of travel and transport. The vigor of the English engineer, the coolness and energy of his American associate, Mr. Hill, and the almost incessant urging of the work by the able contractors, Messrs. Doolittle and Streator, have achieved this result. Such a systemization of labor, such a skilful selection of architects and workmen, and such a husbanding of time, material and resources, have been seldom seen, even upon the largest public works.

The enterprise has been literally driven through—not, however, with any lack of the most thorough oversight and execution. Sixteen hundred men have been employed in all departments of the enterprise, and all kept sharply at work by the admirable organization of the forces by the contractors. As a specimen of the rapidity of the operations, we may mention that the track laying, when unobstructed, was carried on at the rate of one mile per day, and that on one day, two-and one-fifth miles were laid. The work has been prosecuted for the last two or three days in the midst of heavy storms of driving rain, and even at that 'the night has been joint laborer with the day.'

On board the train were Messrs. Kennard and Hill, chief engineers; Messrs. Minot and Marsh, officers of the New York and Erie Railroad, and Signor Deosdado, agent for Don Jose de Salamanca, and Signor Navarro, agent for the Duke de Rienzares, and other representatives of the Spanish interest in this country; John Goddard, Esq., of London; Robert Thallon, Esq., of New York.'

Ohio Railroad Reports.

The Senate Committee, of which the Hon. WM. O. COLLINS is chairman, introduced a resolution, which was passed on the 24th March last, requesting that each railroad company in Ohio, incorporated under any act of the State, should file a report in the office of the Secretary of State, on or before the 20th of October, 1860, setting forth the condition and operations of such company previous and up to the first day of September. The object of this resolution was to secure the greatest possible amount of information in regard to the corporate powers, organization and construction, capital stock, indebtedness, characteristics of the lines, track and structures, machinery and equipments, business and revenue, expenses, &c. The resolution is in no way compulsory, and is, therefore, entirely optional with the companies to give the information asked for or not; but in view of the fact that some future action in regard to the railroad laws of the State may be taken by the Legislature at its next session, it appears to us that it is desirable that they should have the most reliable information before them. There would then be less danger of doing injustice to any company through ignorance.

The Senate Committee has published a circular, which has been addressed to every railroad in the State, embodying a statement of what kind of information is desired, and we trust that each company will respond promptly. It would not only furnish a basis for legislative action, if any should be deemed necessary, but would result in a compilation of most valuable statistics in regard to the extent and progress of the net-work of railroads in Ohio. We hope, therefore, that the Committee will meet with the cordial co-operation of all practical railroad men.

Dubuque, Marion and Western Railroad.

We learn that a contract has been let to Mr. Crosby, of Marion, for the grading, bridging and tieing of this road, from Anamosa to Marion. The company have also ordered a suit to be commenced against the Cedar Rapids and Missouri River Railroad Company to set aside the land grant resumption act, passed by the last Legislative Assembly. This act purports to resume the grant into the hands of the State and regrant it to the Cedar Rapids Company on the ground of forfeiture, although by the terms of the grant no forfeiture could take place before the first day of December, 1865. The Dubuque, Marion and Western Company know their rights and are able to maintain them. Our readers will recollect that the more formidable claim of the Des Moines River Navigation Company to about 108,000 acres of the best of these lands, set up under half a dozen acts of the Legislature of the State, was held to be worthless by the Supreme Court of the United States in March last. The Cedar Rapids and Missouri River Railroad Company are inevitably doomed to share the same fate. Suit will be commenced against them in a few days.—*Dubuque Daily Times, August* 21.

Completion of Minot's Rock Light.

The new lighthouse on Minot's Rock has been completed, and last evening the lantern was lighted up for the first time, to test the power of the light. The lantern was covered so as prevent the light from being seen by inward bound vessels, but was open toward the shore. The light was a very powerful one, and could be seen from a great distance. By the side of it the lights on the light ship seem like farthing candles. We congratulate the mercantile community upon the completion of this important light before another season of storm and disaster. The work has been prosecuted to completion with much vigor by Capt. Alexander of the Engineer Corps, the Superintendent, to whom great credit is due for its early completion. —*Boston Journal*, 23d.

Railroad Earnings.

The receipts of the Grand Trunk Railway of Canada for the week ending August 11, were..... $52,784 17
Week ending August 13, 1859..... 38,874 41

Increase in 1860..... $13,909 76
Total traffic from July 1st, 1860 ..... $322,714 13
Same period last year 238,917 21

Increase..... $83,796 92

The Receiver's report of the Ohio and Mississippi Railroad, for July, is as follows:

RECEIPTS.

Balance on hand from June account...		$33,004 51
Freight earnings of June...	$1,651 76	
Passengers prior to July	10,434 86	
Freight do.	6 673 33	
Passenger earnings in July..	32.165 50	
Freight do. ..	18,749 70	
From other sources..... ..	10,399 47	
		80,075 12
Total.....		$113,099 68

DISBURSEMENTS.

Paid on account 1st mortgage bonds, due January 1, 1860....	$15 015 00	
Interest and discount.	575 12	
Office and other expenses.	693 23	
On acc't balance due other roads	102 61	
Charges advanced on acc't other roads	1,745 97	
On account of June arrearages	4,450 37	
Current operat'g expenses, and construction work for June.....	63,561 85	
		86,144 25
Balance carried to August acc't		$26,935 43

The earnings of the Cincinnati, Wilmington and Zanesville Railroad for July were $14,627 66, and the expenses $12,456 83. The total of receipts above repairs was $2,171 83. The amount due the Company, July 31st, was $9,819 95. The liabilities contracted by the present Receiver, and remaining unpaid amount to $12,486 04.

Cincinnati Stock Sales.

BY KIRK & CHEEVER.

For the week ending August 27 1860.

RAILROAD COMPANIES will oblige us by sending us copies of their Reports as soon as they are published.

Atlanta and West Point Railroad.

The gross earnings of this road for the past fiscal year ending June 30th, 1860, were:

From Passengers	$201,938 46
" Freights	193,557 03
" Mail	20,540 76
" Sale of engine "La Grange"	2,000 00
Total	$418,036 25

The expenditures have been:

For conducting transportation	$38,383 88	
For maintenance of way	52,691 99	
For maintenance of motive power	50,093 59	
For maintenance of cars	9,830 52	
For insurance and taxes	1,209 25	
	$152,209 18	
In addition to the above, there has been paid for—		
New depot at Hoganville and extension of Atlanta depot	4,911 73	
Two new engines	17,425 19	
25 new freight cars	15,650 00	
150 tons new iron	9,868 25	
Fencing the road, new water station, and miscellaneous	8,852 93	
Making a total of		$208,917 28
And leaving as net income from the year's operations		$209,118 97

The increase in receipts over the previous year was:

From passengers	$22,061 88
From freight	31,916 40
Total increase	$53,978 28

The ordinary current expenses have been slight-

ly reduced, while the extraordinary expenses are increased by the purchase of new engines, cars and iron rails as may be seen by inspection of the foregoing statements.

The number of bales of cotton hauled, is 72,906, being 9,887 more than in the previous year, and probably very near the maximum that ever will be carried in one season upon the A. & W. P. railroad.

The increase in the number of passengers carried, as well as in the income from that source, compares well with former years—a result peculiarly gratifying in view of the active competition since the completion of rival Southern and Western routes.

The engine and car equipment consists at present of 16 locomotive engines, 7 passenger cars, 4 baggage cars, 85 freight box cars, 20 freight stock cars, 5 freight coal cars, 20 freight platform cars.

Two new freight engines have been placed upon the track, and two more are ordered for delivery before the next winter's business commences. The repairs are still, as heretofore, done by the Georgia Railroad Company at their shops in Atlanta and Augusta.

The road-bed and track have been well kept up, and the repairs conducted with economy and discretion.

The following is an exhibit of the condition of this company, on the first of July, 1860.

ASSETS.	Dr.
Road outfit and real estate	$1,192,389 76
Bills receivable	202,421 31
Due by agents and corporations	87,375 90
Excess of material on hand	9,568 50
Cash on hand	105,630 17
	$1,597,385 64

LIABILITIES.	Cr.
Capital stock	$1,250,000 00
Bonds of the Company	126,000 00
Due connecting roads	41,100 11
Due for expenses and dividends	9,518 50
Profit and loss	170,767 03
	$1,597,385 64

President—Hon. John P. King.

Directors—Andrew J. Berry, Jesse McLendon, John E. Robinson, Richard Peters, Pleasant Stovall, Hon. Orville A. Bull.

General Superintendent—Geo. G. Hull.

Secretary and Treasurer—Wm. P. Orme.

Hudson River Railroad Depot.

The new depot of the Hudson River Railroad Company about to be built at the foot of Broadway will be one hundred and sixty feet on Broadway and one hundred and sixty feet on Greenwich, with a depth of two hundred feet. The ground cost $220,000, and it is the intention of the company to put up a building which shall not only furnish every possible accommodation for passengers and freight, but shall be an architectural ornament to the lower part of the city. Their depots in West Broadway and Eleventh avenue will be reserved as local stations. The company are now receiving freight daily at that point and carting it up to their lower depot. The rails of the Ninth Avenue road will probably be laid down town early in the fall, when the Hudson River Railroad Company will immediately put on cars for the transportation of their freight. The route of the Ninth Avenue road, upon which the Hudson River Railroad Company will do all their business, is down Washington street, through Battery Place, and up Greenwich street.

Louisville, Frankfort and Lexington Road.

This line is 94 miles in length. It is composed of the Louisville and Lexington railroad, extending from Louisville to Frankfort, 65 miles, and the Lexington and Frankfort railroad, thence to Lexington, 29 miles. The annual meeting of the stockholders in these roads was held on the 31st of July, at which the annual reports for the fiscal year ending June 30th were presented. In accordance with the articles of agreement adopted at the previous annual meeting, these two roads have been operated during the past year as one; the net earnings, after the payment of all operative expenses, being divided between the companies in the proportion of the lengths of their respective roads. The receipts from the joint operations of these roads were:

From passengers	$212,133 69
" freight	165,982 37
" mails	8,963 00
" miscellaneous	3,299 11
	$390,377 17

And the expenditures were:

Repairs of road	$44,983 19	
" locomotives	20,738 21	
" cars	25 249 44	
" bridges	6,171 83	
" rails	4,336 08	
" buildings, etc.	5,857 25	
Fuel	22,876 76	
Wages	49,581 49	
Chairs and spikes	3,016 70	
Cross-ties	6,011 76	
Ballast	7,984 18	
Miscellaneous	14,427 74	
		211,234 18
Net profits		$179,143 04

Compared with the preceding year, the gross earnings of the joint roads show an increase of $2,148 77

The expenses an increase of 1,092 99

Making the increase in net earnings $1,050 78

The revenue from passengers shows an increase of $20,362 56, or 10.6 per cent.; while that derived from the transportation of freight decreased $20,402, or 10.9 per cent. The diminution in the freight earnings is due principally to the falling-off in the number of hogs transported during the months of November and December.

Louisville and Frankfort Railroad.

The proportion of gross and net earnings and expenses applicable to this road is as follows:

Earnings	$270,053 08
Expenses	145,183 23
Net profit	$124,869 85

While the gross earnings show an increase of only $2,006 89, the expenses have been reduced $8 918 08—thereby making an increase of $10,924 97 in the net earningss.

Of the net revenue $19,584 97 have been expended in the purchase of materials for the use of the road, and the remainder has been appropriated to the payment of interest, and the maturing debt. The reduction of debt during the past year has been $84,097 87. Since July 1, 1855, it has been reduced $296,096 87, besides the expenditure during the same time of $45,680 27 in the re-construction of the Frankfort bridge, and the investment of a large amount in station houses, water stations, ballasting, etc.

The board have full confidence in the ability of the road hereafter to earn sufficient to meet the bonds as they mature, and to pay on the present amount of stock semi annual cash dividends of 3 per cent., commencing Jan. 1, 1861. The stock and indebtedness of the road now amounts to $1,161,588 91, while the cost is $1,502,094 61. This difference has been paid out of the net earnings, to the amount of which the stockholders will be entitled to stock, whenever it will be advisable to declare it.

After providing for the July interest, there remained $5,000, which, together with bills receivable, and real estate not required for the purposes of the road may be used for the further reduction of the debt.

Balance Sheet, July 1, 1860.

Capital stock		$741,069 40
State of K'y, for right of way, etc.		74,519 50
City of Louisville bonds		149,000 00
Railroad bonds matured July 1, 1860,		36,000 00
" " old and new		197,000 00
Cash dividends unclaimed		585 36
Profit and loss		464,566 30
		$1,662,740 56
Construction	$1,375,359 61	
Proportion of rolling stock	126,735 00	
Stock in other roads	6 540 00	
Real estate	39,066 64	
Proportion of materials	62 609 52	
Cash in New York to pay bonds	36,000 00	
" " " interest	7,108 89	
Bills receivable	3,600 32	
Cash	5,720 58	
	$1,662,740 56	

President—Edward D. Hobbs.

Directors—Robert G. Courtenay, T. T. Shreve, E. H. Hobbs, R. C. Hewitt, T. Merriwether, J. W. Kalfus.

Superintendent—Sam'l Gill.

Secretary and Treasurer—W. H. Beynroth.

Lexington and Frankfort R. R.

The proportion of gross and net earnings and expenses applicable to this road is as follows:

Earnings	$120,324 09
Expenses	66.050 90
Net profits	$54,274 19

The gross earnings show an increase of $136 88, the expenses an increase of $10,006 07—making the decrease in net earnings $10,142 95, which is attributed to the same cause as that above alluded to. Notwithstanding this decrease in net earnings, they have been sufficient to justify a declaration of 7 per cent. in dividends, provide the proper sinking fund for the payment of the debt, and increase in an amount more than one per cent. upon the stock, the renewal and contingent fund. Large amounts have also been expended in ballasting, widening cuts, building station houses, etc., which has added to the value of the company's property.

Balance Sheet, July 1, 1860.

Capital stock	$514,409 44
Bonds	130,000 00
Dividends unpaid	1,891 50
Sinking fund	12,500 00
Renewal and contingent fund	37,337 26
Stock profits	22.439 65
Profit and loss	6,287 77
	$724,865 62

Construction	$590,401 20
Proportion of rolling stock	52.300 50
Bonds receivable	38.000 00
Bills receivable	8,191 03
Real estate	978 84
Proportion of materials	30.338 19
Cash	9,656 06
	$724,865 62

President—EDWARD D. HOBBS.

Directors—Benj. Gratz, M. C. Johnson, F. K. Hunt, P. Swigert, W. A. Dudley, John Carty.

Superintendent—SAM'L GILL.

Secretary—E. S. DUNCANSON.

The completion of the Lexington and Big Sandy railroad to Mount Sterling, and the Shelby railroad from Hobbs Station to Shelbyville, is urged upon the attention of the stockholders of both roads, as being calculated to materially strengthen their line as a competitor for the business of the adjacent country, and add largely to its net revenue.

The equipment of the entire line consists of 12 locomotives, 10 passenger, 5 baggage, and 160 freight, stock and platform cars.

Pacific Railroad of Missouri.

Passenger trains have commenced running on this road to Otterville, 176 miles west of St. Louis. The heaviest work on the line west of Jefferson City was between Syracuse and Otterville—one mile costing for grading alone some $65,000; and progress has, therefore, been slow. From Otterville west all the way to Jackson county, the work is light. The grading is well advanced as far as Sedalia, and the road will be opened to that point in December next. Upon the Southwest Branch track laying has been resumed, and trains will soon be running to Dillon, with the promise of reaching Rolla, county seat of Phelps in December.

Henderson and Nashville Railroad.

Track-laying was commenced on this road at Henderson, on the 20th ult. Rails sufficient to iron five miles had arrived and the length will be completed by the 1st October, and a second five miles will probably be opened by the 1st December. On the southern end of the line the work is being constantly and vigorously prosecuted. From the State line toward Hopkinsville twenty miles have been graded and are now ready for the reception of the iron. Trenton District, in Todd county, has voted a large subscription of stock, and Christian county a subscription of $300,000. With these means, besides others, which can be made available, it is certain that the road will speedily be built through Todd and Christian counties, leaving but the gap of Hopkins and Webster. This gap will soon be filled, and before the close of 1861 the communication between Nashville and Henderson will be entirely by rail.

Improved Car Coupling.

The following notice of a newly invented Car Coupling is from the Cincinnati *Enquirer*:

The patentees claim for it that a train of any number of cars can be coupled by simply backing them together, and a boy ten years old, standing upon the platform of a passenger car, or on top of a freight car, out of all danger, can uncouple a single car or an entire train, either when in motion or standing still, on a level or on a grade. No backing or "stacking up" of the train is necessary before uncoupling; and, by the use of this invention, an engineer, seeing danger ahead, could detach the whole train as easily and as quickly as he could sound the steam whistle, and thus prevent a catastrophe from dragging the train after the locomotive off the track or over an obstruction.

The New Pipes over the High Bridge.

The work of laying the new seven-feet pipe over the High Bridge will be commenced shortly, so far as the reception and manufacturing of the boiler iron plate for the pipes is concerned, the first consignment having been received. An iron pipe of seven feet diameter will be something of a curiosity, being the largest ever manufactured in the world. The work of lowering the Croton pipes in the Eighth-avenue, for a distance of a mile and a half, from five to ten feet, without interfering with the flow of the Croton water, has just been completed, and the avenue filled in and up to its level. This is a work that reflects the highest credit upon the Chief Engineer of the Croton Department, A. W. CRAVEN, Esq., who planed it, and GEO. S. GREEN, Esq., the Assistant Engineer, under whose personal supervision the work was commenced and carried to successful completion.

Bank Dividends.

The Bank of Louisiana has declared a semi-annual dividend of 5 per cent., payable to New York stockholders, less exchange, on the 3d of September, at the Merchant's Bank of this city.

Flint and Pere Marquet Railroad.

About ten miles of rail has been laid between Saginaw and Flint, on the Flint and Pere Marquet road, and progress is being made at the rate of three-eighths of a mile a day.

Alabama and Florida Railroad.

The Pensacola *Observer* of 8th ult. says: "We have the pleasing intelligence this morning that the last rail has been laid on the Florida end of the Alabama and Florida Railroad, and that track-laying will be prosecuted instantly and vigorously from the State line towards Montgomery.

☞ The Vicksburg, Shreveport and Texas Railroad has been extended across the Bayou Macon, and the cars are now run to Delhi.

The Production and Consumption of Coffee.

The quantity of coffee produced in the world is as follows: Brazil, 519,000,000 lbs.; Java, 202,500,900 lbs.; Ceylon, 105,000,000 lbs.; St. Domingo, 75,000,000 lbs.; Sumatra, 30,000,000 lbs.; Cuba and Porto Rico, 30,000 000 lbs.; Venezuela, 30,000,000 lbs.; Costa Rica, 15.000.000 lbs.; Mocha, 7,500,000 lbs.; English West Indies, 7,500,000 lbs.; Manilla, 4 500.000 lbs.; French and Dutch West Indies, 3.000,000 lbs. Total, 1.024,000,000. The consumption of coffee is estimated in the following manner: The whole of North America consumes 327.500,000 lbs., being in the largest proportion; France, Switzerland, Spain, Italy, Portugal and adjoining islands, consume amongst them only 202,500,000 lbs.; Germany, including Austria, 292,500,000 lbs.; Holland and Belgium, 142.500,000 lbs.; Denmark, Sweden, Russia, Finland and Poland, only 75,000,000 lbs. among them, owing, probably, to the fondness of those nations for something stronger. Great Britain and Ireland consumes about 60,000,000 lbs.

Notice to Contractors.

ENGINEER'S OFFICE, COVINGTON & OHIO R. R.,
At Callaghan's, Alleghany County, Va., 27th Aug., 1860.

SEALED PROPOSALS, addressed to the undersigned, and endorsed "Proposals," will be received at this office until 12 o'clock M. of Wednesday, the 26th of September next:

For the construction of a Tunnel near 3,700 feet long, 15½ miles west of Covington;

For the grading of a temporary Railroad track over the above tunnel;

For the grading of about one-half mile and completion of the grading of one mile of Railroad, at and near Covington;

And for the cross-ties required for twenty-five miles of Railroad track and sidings, between Covington and the White Sulphur Springs.

The Specifications and plans of the work, and the form of contract, which states fully the terms and conditions upon which the above work will be let, may be had and seen at this office, on and after the 12th of September next.

The right is reserved to accept such proposals as will best secure the faithful construction and completion of the work, according to contract, and to reject any or all that are not satisfactory.

No transfer of the allotment of any work will be allowed.

Persons proposing for work, who may be unknown to the undersigned, are expected to present satisfactory references.

By order of the Board of Public Works.
3t35 CHARLES B. FISK, Chief Engineer.

RAILROAD IRON,
52 LBS. per yard, at New York and Hampton Roads, Va., and a market.
The attention of Companies requiring Rails is asked to the above cargoes of Superior Welsh make, to arrive in September.

11. " 18 "		¾ to 1	23. " 32 "		1 to 1
12. " 18 "		1 to 1	24. " 32 "		1½ to 1

The Tables are printed in clear, bold type on tinted paper; sheets 25x16 inches. They may be used by candle-light without injuring the eye-sight. Each sheet is complete in itself, and embraces all that is wanted in connection with the Base or Slope designated, whether on level or side hill cross section.
Sent, free by mail, in separate sheets, at 25c. each; or the whole, handsomely bound in cloth, in one volume, for $7.50.

ENGINEER'S FIELD BOOK,
By C. S. CROSS, Civil Engineer.
THIS work is designed as a pocket companion, and embraces, in the most compact form, all the necessary tables for prosecuting railroad surveys. It is subdivided as follows:—
1st. The method of staking out railroad curves and keeping field notes.
2d. Railroad curve tables for expeditiously determining the points at which commences the curving.
3d. Application of the Prismoidal formula in determining the quantities of excavation and embankment of canals and railroads from transverse sections.
4th. Excavation and embankment tables for expeditiously determining the cubic yards from mean area.
It is a plain, clear and most valuable book for practical Railroad Engineers. Sent, free by mail, upon receipt of the price. For sale at this office. Price $1.

CEMENT ROOFING.

PATENT MICA
AND
Fibrous Cement Roofing.
IT HAS STOOD THE BEST OF ALL TESTS—TIME!
IT fully sustains the high reputation it has gained, as a PERFECTLY RELIABLE, DURABLE and WATER PROOF ROOFING. It is adapted to every variety of Roof, new or old, and is the best and cheapest Cement in use for repairing OLD LEAKY TIN or other Roofs.
ALL WORK WARRANTED.
Cement for sale by the Barrel, and sent to any part of the Country, with printed instructions for use.
Also, for sale, State and County Rights for a portion of the United States. DITTO, PORTER & CO.,
Successors to JOSEPH DITTO & Co.,
207 Broadway, cor. of Fulton st., N. Y

GUTTA
PERCHA
ROOFING,
IN Rolls which anybody can put on; waterproof, elastic, durable, fire-proof; needs no repairs; costs about half as much as Tin, and lasts twice as long.
These Roofs are suitable for any style of building. They can be steep or flat, or of any required inclination. Also,
LIQUID
Gutta Percha Cement,
Preferable to paint for covering Tin Roofs, protecting them for many years from rust, and rendering them water tight.
Samples, Terms, Price, etc., furnished on application.

SUPERIOR CAR BOX OIL,
At 25 per cent. below the cheapest Lubricating Agent in use.

THE Oil is chemically pure; is entirely free from Gum and Acid; and at thirty-eight degrees below freezing point retains its perfect limpidity.
LOSEE & BOGERT, Agents.

OIL! OIL!
PEASE'S
IMPROVED ENGINE and SIGNAL OIL,
FOR
RAILROADS, STEAMERS, PROPELLERS,
AND FOR EVERY CLASS OF
MACHINERY AND BURNING.

PRACTICAL TESTS, by Engineers and Machinists, of Thousands of Gallons, PROVE this Oil to be superior for Burning, and TWENTY-FIVE per cent. more durable than Sperm Oil, for Lubricating, and the only Oil that is in all cases reliable, that will keep bearings cool, and
WILL NOT GUM.
In no case has it failed to meet the approval of the consumer.
The SCIENTIFIC AMERICAN and MANUFACTURER'S JOURNAL, after testing this Oil, pronounce it superior to any other for Lubricating—For sale ONLY by the Inventor
F. S. PEASE, 61 Main st., BUFFALO.
Reliable orders filled for any part of the United States or Europe.

CEMENTS.

THE LAWRENCEVILLE MANUF'G CEMENT COMPANY,

OFFICE 96 WALL ST.,

NEW YORK.

THIS Company manufacture **ROSENDALE HYDRAULIC CEMENT** of a superior and uniform quality, and are constantly receiving it **fresh** from their Works at Rosendale. Particular attention paid to grinding **fine,** and packing in superior casks. We warrant it to set under water, and attain a hardness excelled by no Cement manufactured. It has met the approval of Government, and we are at present supplying the fortification now in course of erection, together with Water Works and Public Buildings. For sale upon favorable terms by addressing.

WM. N. BEACH, President.

CHAS. E. LAWRENCE, Sec'y.

DELAFIELD & BAXTER'S,

Late OGDEN & DELAFIELD,

ROSENDALE CEMENT.

WE are prepared to enter into arrangements for supplying our CEMENT for public works, or other purposes. We **warrant it equal in every respect** to any manufactured in this country. It attains a great degree of hardness, sets immediately under water, and is a **superior article** for masonry coming in contact with water, or requiring great strength. For sale in tight barrels, well paperred, on application at their office, by **DELAFIELD & BAXTER, 104** Wall st.

The above CEMENT is used in most of the fortifications building by government.

45

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight, and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co. N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which, if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

Rosendale Hydraulic Cement.

THE NEWARK AND ROSENDALE CEMENT COMPANY are now receiving **fresh from the Mills** their approved ROSENDALE CEMENT, warranted **pure** and **free from quick lime,** and which has given such **general satisfaction** in the various government and other public works in which it has been used. Purchasers and shippers should be careful to get the **genuine ROSENDALE CEMENT,** branded "NEWARK AND ROSENDALE," "H. WILDE." This Cement does not swell and burst the hoops when stored in warm climates. It is packed in tight **kiln dried barrels,** and is specially adapted for safe shipping on long voyages. Terms reasonable, which may be known by addressing.

JOHN H. STEPHENS, President, Newark, N. J., or **HENRY WILDE.** Secretary, 90 Wall st., N. Y.

HOFFMAN'S ROSENDALE CEMENT,

OFFICE, 92 WALL ST., NEW YORK.

THE LAWRENCE CEMENT COMPANY are prepared to receive and execute orders for their Cement, to any extent that may be required. They would particularly call the attention of purchasers to the distinguishing brand of their manufacture, viz.: **HOFFMAN'S ROSENDALE CEMENT.** This seems to be necessary, as they have established a reputation for the superior quality of their Cement, and there are various other brands offered, as "Rosendale" Cement. It has the unqualified approbation of the most eminent Architects and Engineers, being used in almost every department of the Works under Government. It is put up in the most careful manner, each barrel being well lined with paper, and will be delivered on ship board, in this city, on the most favorable terms. Particular attention given to shipping orders, and Freight obtained on the best terms.

M. W. WOODWARD, Secretary.

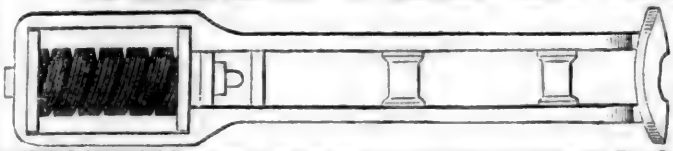
THE HUMPHREYSVILLE MANUFACTURING COMPANY,

(SUCCESSORS TO DWIGHTS, FRENCH & CO.)

SEYMOUR, CONN.,

ARE prepared to fill, at short notice, of the best materials and workmanship, orders for **Wrought** and **Cast Iron Work**, fitted ready for use, for the building or repairs of **Passenger** and **Freight Cars**, complete or in part.



A sample wrought iron truck can be seen at our office. **No. 5 Gold st., NEW YORK.**

We also manufacture—

BEST FAGGOTTED CAR AXLES,
SALISBURY IRON CAR WHEELS,
WROUGHT IRON BOLTS, NUTS & WASHERS,
RAILROAD JACK SCREWS, ETC.

RAYMOND FRENCH, Pres't, Seymour, Conn. **WM. H. MARSHALL**, Treas'r, No. 5 Gold st., N.Y.

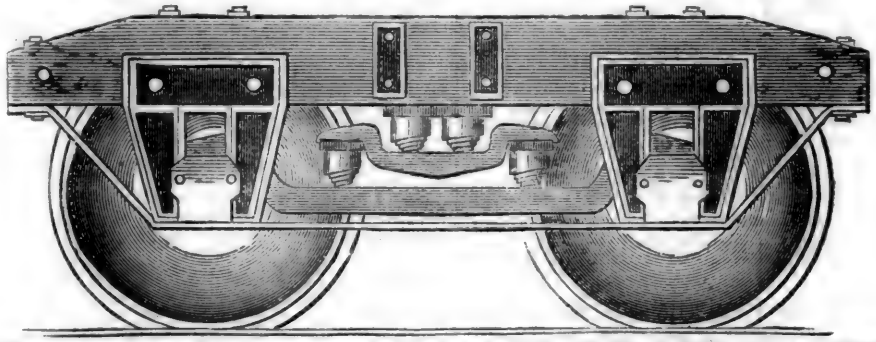
STEEL CAR SPRINGS,

MANUFACTURED BY THE

PATENTEE,

Carlos French,

SEYMOUR, CONN,



THESE SPRINGS are now in use on many of the **leading Railroads** East, South and West. Samples can be examined and Price Lists obtained at **No. 5 Gold st., NEW YORK.**

THE METALLIC CAR SPRING COMPANY

OF NEW YORK,

Manufacturers of PATENT CONICAL VOLUTE STEEL CAR SPRINGS.

OFFICE, 54 WILLIAM STREET, NEW YORK,

WITH increased capital and facilities, and ability to meet all orders promptly, this Company respectfully invite the attention of Railroad Managers, Car and Engine Builders, and others interested in Railroad Machinery and Economy, to these Springs, and the improvements in their application. Orders and correspondence solicited.

CHARLES D. GIBSON, Treasurer. **COURTLANDT PALMER, Pres't.**

OUR NEW RAILROAD MAP FOR 1860.

We are now prepared to supply our subscribers with copies of this MAP—the condition being *the payment of their dues to the close of the current year.* A copy of the Map, neatly done up in pocket form, and pre-paid, will invariably accompany our receipt for the same.

We also have them for sale. Price: Mounted on rollers, **$3.00**; do., colored in counties, **$4.00**; in pocket form with cover, **$1.00**—the latter sent by mail, pre-paid, upon receipt of the price.

The Victoria Bridge.

"Seven mighty cities claimed great Homer dead,
Through which the living Homer begged his bread."

We do not pretend to state the exact degree of parallelism between the claims put forth for the birthplace of the immortal poet, and those for the authorship of the famous Victoria Bridge. Enough to say, that at the very instant the touch of royalty has legitimized this wonder, and given it rank and place among the great works of the earth, (previous to which ceremony it was like a young man not come to his estate, or a young miss not yet brought out, both of which are mere possibilities, having no determinate place in the public voice,) a mighty contest is going on as to the person entitled to have his name carved on the massive entablature (in letters more durable than brass), as the deviser or author of the structure.

Who is the happy man to be immortalized, we cannot yet state. To prove who he ought to be, is endeavored to be set forth in a pamphlet which we have just had the honor of receiving—to wit: Mr. Thomas C. Keefer, Civil Engineer, born and reared in the Canadas, and of some note there before the commencement of the great work. At what period it first entered the mind of mortal that at certain seasons of the year, a *bridge* over a river rendered impassable by forming or floating ice, would be a desirable thing, we will not pretend to say. Under such circumstances, it would be natural for a person to say: "I wish there was a bridge over the ugly stream." But such a suggestion is to be hardly tolerated, as the idea of a bridge might, to the dismay of the present candidates for immortality, be carried back 200 years.

But to come down to the realm of certainty, it is in evidence, to our own eyes, that Mr. Keefer *did* propose, in detail, a plan for a bridge on its present site as early as 1851, before the design for the Victoria Bridge was openly promulgated. His plan, however, had nothing brilliant or sparkling about it. Mr. Keefer's ideas, at the time, seem to have been drawn from a very prosaic way of studying the *ice phenomena* of the St. Lawrence, which he proposed to meet by the common and simple devices in vogue both in the United States and Canada, in similar emergencies. He stated in a very plain and simple manner the whole case, and proposed a structure, which for novelty or originality, provoked neither surprise nor comment in the profession, if we except general terms of commendation, but which seemed well adapted to the object to be accomplished. Its only objectionable feature was its cost, some $1,500,000. The foundations were to be crib-work, filled with stone; the superstructure wood, with perhaps a centre span of iron.

Excellent as was Mr. Keefer's design, it met with no response. All approved it, but no one suggested its adoption. Why, we never could understand. Perhaps it was too simple and commonplace. We can well imagine why it should create no enthusiasm. So slight a work, and so small a deviation from the common mode, would never have adequate force to attract to the new channel, the "commerce of the West." But a structure, the cost of which would run hard into the millions, would stand a conclusive demonstration of the value of this new route, and put to silence all cavillers and doubters. The occasion was no ordinary one. The actors in it consequently must be equal in dignity and importance. The first mechanical engineer in England was called over to design the plan and inaugurate the undertaking. The millions required were eagerly supplied. The structure now proudly spans the St. Lawrence. Royalty itself has given it its last touch. The only thing that disturbs the universal satisfaction, is the contest for the *authorship* of the great work.

But, after all, should the authorship of this work be freely conceded to Mr. Keefer, the great question really is, not whether it is to be sought, but whether he can afford to wear the honors. The work is a vast one, but after the Britannia Bridge, one of the simplest problems possible in Civil Engineering. It was only a question of *dollars.* Such being the case, if it had cost $15,000,000, instead of $7,500,000, it should have reflected twice the credit upon its author. The credit really due for the construction of any work is measured by the economy of expenditure with which it accomplishes its object. The days of the Pyramids are past. We want no more works which are only ostentatious and useless displays of riches and power. If the St. Lawrence could have been spanned by a structure costing $1,500,000, and adapted to every want of commerce, then one costing $7,500,000, instead of being a theme of praise and self-gratulation, should be one of censure and condemnation. To summon royalty to consecrate it, is to use power and place to sanction a great wrong. What was the contract with the English stockholders, who furnished the money—that it should be judiciously and economically expended, and in a manner that would make the investment a productive one. If this has not been done, there has been unfair dealing, deserving the severest censure, instead of being elevated into a virtue, through the influence and patronage of the noble and great.

We know that, for the present, we have taken the

unpopular side. A person who does not join in the universal pæan is set down as a man of unseasonable manners, and a churl. But we have only to wait a bit. Suppose the bridge should produce nothing to the stockholders, would not the recent ceremonies be regarded as pretty tall specimens of tomfoolery? Would the unfortunate persons who furnished the money derive any particular balm from this laying on of princely hands? Would it not rather add to their sense of mortification? Would not the author of so vast a mischief be rather an object of reprobation than praise? If so, we advise Mr. Keefer not to put in his evidence just yet. If he does, he may be inclined to become non-suited before he is through with his case. His strong card consists in showing that he is *not* the author of the present structure. The credit of it will in five years from this time finish up any engineer, for this continent, to say the least. No engineer can expect position and employment in this country who in his plans and work does not always maintain a proper relation between the amount of his expenditures and the objects sought to be accomplished. There is no such relation in the case of the Victoria Bridge, which must soon come to be regarded as the most *discreditable* piece of engineering on this continent, notwithstanding the vastness of the work, the imposing ceremonies which signalized its completion, and the number of pilgrimages made to it by curious and wonder-loving sight seers.

Macon and Brunswick Railroad.

We rode down to the Railroad Bridge lately with Judge Cochran, the President of the Macon and Brunswick Railroad Company, following, for the greater part of the way, the railroad track. The distance of the bridge from town is about five miles, and this is all graded with the exception of less than half a mile to the bridge. An embankment of about five feet on an average for this distance remains to be thrown up, and this is being rapidly done by a large force. Capt. J. H. Andrews is the contractor for this grading, and is pushing it ahead rapidly. Beyond the bridge, the grading is nearly done to a distance of about twenty-eight miles from town. The superstructure of the road is also in fair progress. A little short of two miles of the track has been laid, and this part of the work is going on at the rate of about a mile and a half per week.

The bridge is nearly done. The frame-work is all up, and the flooring and enclosure are about all that remain to be done. This structure is 322 feet long, and rests in the centre and both ends upon solid stone abutments handsomely laid in cement. It is a truss bridge—the main stringers formed by three pieces of thirteen inch square timber, while the upper stringers are a little lighter, and the whole framework is interlapped and bound together in a manner perfectly surprising to the novice in bridge building. It is the best and strongest specimen of bridge framing we ever saw —not only in its design, which was quite novel to us—but in the character and accuracy of the work.

* * * * * * *

The road on reaching the Ocmulgee bottoms, takes a bee line, and follows it, we are told, without a single deflection for eleven miles. It has a five foot embankment about all the way through the bottom on this side, and the soil is a tenacious clay which will furnish, in time, a capital road-bed. The immense and beautiful growth of timber in these bottoms will open a new and large supply of fuel for this market, while the country beyond will furnish new supplies of lumber. Both are getting too scarce in Macon. We hope by next December to see thirty miles of this road in operation, and that it will reach a point opposite Hawkinsville by spring. It is certain that the enterprise, under the zealous and efficient direction of Judge Cochran, is being pushed forward with energy, judgment and economy.—*Macon Telegraph.*

Journal of Mercantile Law.

OF THE PRESENTMENT OF NOTES AFTER BUSINESS HOURS FOR PAYMENT; WHEN UNDER THESE CIRCUMSTANCES IT IS SUFFICIENT.

When a note is made payable upon a certain day, and at a certain place, the law will presume that the intention of the parties to the contract is that the note should be presented at the designated place during the business hours of the appointed day, and if not so presented the endorsers are discharged from all liability. But this rule, being founded upon reasons arising from the circumstances under which men generally transact their business, it is liable to change when the presentment, although made after the business hours of the day, yet is made during the day and under circumstances which ensure to the maker and endorser all the advantages which they would have had, had the presentment been made during business hours.

A peculiar case, illustrating this principle, has been decided by the New York Court of Appeals. The action was brought by the Bank of Syracuse against John Hollister, as endorser of a note made by one F. Hollister, for the payment of $2,750, one year from date, at the Bank of Utica.

It appears that on the 9th of April, 1852, when the note became due, it was brought by a clerk of the plaintiff to the paying and receiving teller of the Bank of Utica, who was also a notary public, at his boarding-house in that city, at half-past six in the evening, and delivered to him for collection or protest. He went to the Bank, found the outer door locked, and could not obtain admission. He then made a demand of payment of the note of himself, standing upon the steps before the outer door of the Bank, and then went to his boarding-house and made out the notice of protest, and deposited it in the post-office before seven o'clock, the mail leaving at eight, directed to John Hollister, Buffalo, his place of residence. It further appeared, by evidence of the teller and notary, that the maker of the note had no funds in the Bank, and that no one called at the Bank to pay the note, or inquired for it during business hours, which closed at four o'clock, P. M.

Upon this state of facts, the judge at Special Term held that there had been no sufficient demand of payment, and ordered judgment for the defendant, which was affirmed by the General Term of the Court; but the Court of Appeals thought differently, and reversed this decision. The following is the opinion of the Appelate Court:

HARRIS, J.—Two questions are involved in the decision of this case: First. Relating to the time of presenting the note for payment. Second. The manner of presentment.

As to the time: The note was payable at the Bank of Utica. By making it thus payable, the maker agreed that the note should be paid during the usual business hours of the day upon which it matured. The holder also agreed that the note should be presented for payment within the same time. In giving effect to the contract, the law presumes that the parties intend to conform to the known and established course of business at the place where their contract was to be performed. The general rule therefore is, that where the note is payable at a bank, it must be presented for payment before the usual hour of closing the banking-house.

Thus in Parker *vs.* Gordon, a bill was payable at a banker's, whose usual time for closing his shop was six o'clock. The bill was presented after that hour. The shop was closed and the clerks gone. In an action against the drawer of the bill, it was held that the presentment was not sufficient. But though the presentment is made after business hours, it will be sufficient, if a proper person be found at the place to give an answer. In Garnett *vs.* Woodcock the bill was payable at a banker's in London. It was presented for payment in the evening of the day when it became due. A boy returned for answer, "No orders." Lord ELLENBOROUGH said upon the trial: "I think it perfectly clear that if a banker appoint a person to attend, in order to give an answer, a presentment would be sufficient, if made before twelve at night." So where a draft, payable at the bank, "was presented for payment in the afternoon of the last day of grace, after regular banking hours, and the cashier of the bank being there, refused payment because there were no funds there belonging to the acceptor, it was held that the cashier, whose duty it was to attend to business of this sort, being at the bank, and having returned a negative answer, and it appearing that the acceptors had provided no funds, the demand was sufficient." In the latter case, Lord ELLENBOROUGH said, in answer to the objection that a bill had been presented after business hours: "In general, it is not sufficient. It will not do if nobody is there to receive; but if somebody is there, and the person presenting the bill gets an answer, it is sufficient."

BAYLEY, J. also said: "If it is presented after the usual hours, it is at the peril of the person presenting it; for, if nobody is there, it will not do; but if there is, then it is immaterial at what time it is presented."

The latter Judge, in his *Treatise on Bills*, also says: "A presentment at a banker's, out of the usual hours, will be objectionable, if the banker, or any agent on his behalf, were there at the time of such presentment." So, also, Chitty says: "A presentment at any time in the day or evening is sufficient, if an answer be given by an authorized person." It was not too late, therefore, to present the note for payment at half-past six o'clock, if an authorized person could be found at the bank to give an answer.

We are, therefore, next to consider the manner in which the note was presented. It had been delivered to the teller of the bank, he being a notary for the purpose of demanding payment and giving notice to the indorser. He was the very officer to whom the note should properly have been presented for payment. He was the person of whom the maker of the note should have inquired for the note, if he had come to pay it. If the money had been deposited to meet the note, he would have received it. He had been at the counter of the bank during the business hours of the day. He knew, and testified, that no person had inquired for the note, and that the maker had no funds in the bank. What, under such circumstances, was it necessary for the teller to do, in order to charge the indorser? He was the agent of the holder of the note to demand payment, and was at the same time the proper officer of the bank to answer the demand either by paying the note, or by refusing

to pay. Had funds been provided to meet the note, he would have paid it. Knowing the fact that there were no funds, the teller, nevertheless, went to the banking-house, and, finding the outer door locked, made a demand of payment of himself as the paying officer of the bank. Had he unlocked the door and entered the building, he being the person authorized to pay or refuse payment, it could not have been doubted that the demand was sufficient. This, of course, would have been an idle ceremony. The teller knew this, and, therefore, abandoned his attempt to enter the bank. I think, however, that he did enough to satisfy the condition upon which the indorser was to become liable. Suppose the note had been delivered to the teller before the close of banking hours, he would have had nothing to do but to give notice of non-payment. No formal demand would have been required. It would have been enough for him to be satisfied, either from his own knowledge of the fact, or an examination of the books of the bank, that there were no funds there to pay the note. Suppose that, when he went there, the teller had gained admission, he would then have had nothing to do but to return back and give the appropriate notice to the indorser. No proclamation, no clamorous demand, was required. This view of the question, I think abundantly sustained by authority.

His Honor here cites several authorities, and concludes by reversing the judgment of the Supreme Court and ordering a new trial.

Grand Trunk Railway of Canada.

The London Directors havd issued the following explanatory statement to bondholders:

"From the tenor of the communications received at this office since the announcement was made public that the payment of the interest due on 1st instant on the preference bonds would be paid, but that that due on the company's ordinary bonds would be postponed, the London directors are led to believe that an erroneous opinion prevails not only in reference to the causes of this temporary suspension, but also in regard to the disposal of the proceeds arising from second preference bonds. It will be remembered that at the meeting of the shareholders held in London on 30 March last, a statement was submitted showing that in addition to this preference capital 1,500,000*l.* was required to pay off the then existing liabilities of the company, and to provide such further station accommodation, rolling stock, &c., in Canada, as are needed to enable the company to work efficiently and economically the anticipated traffic. Authority to raise this amount was subsequently given at the meeting of the company held in Montreal on 23d May last, but the directors have not as yet been able to put it in force. As regards the recent subscription for the second preference bonds to complete the amount of the original Government loan, only 84,000*l.* was subscribed for by the public (producing about 66,000*l.* sterling), which sum was applied to the payment of pressing and unavoidable engagements. A large proportion of these bonds were hypothecated with individuals for loans and advances, and were taken by the parties with whom they were deposited at the same prices at which they were offered to the public, and the residue have either been disposed of in accordance with the conditions on which loans had been made upon them, or remain hypothecated as collateral security for advances to the company. This operation relieved the company from important liabilities maturing; but it was not thereby placed in available funds out of which the interest now postponed could have been paid. The directors here have communicated to the Canada board their views as to the remedies that ought to be applied in the present critical position of the company's affairs, and if they ask the patience of the bondholders until full consideration can be given to their representations, they act from a conviction that the interests of all will be best consulted by avoiding any precipitate movement. The replies to these representations may be expected by the end of next month, and when received, a further communication will be made to the bondholders."
—*London Railway Times, July* 21.

Milwaukee and Mississippi Railroad.

The annexed is an abstract of the agreement of the bondholders of the Milwaukee and Mississippi Railroad Company, dated July 30, 1860, for the purchase of the road at any foreclosure sale, and the re-organization of the purchasers:

First: Each First mortgage bondholder, being a subscriber to the agreement, receives a new First mortgage bond, convertible into the first class Preferred Stock, secured by a mortgage of all the property of the company, real and personal, for his principal, and the first class Preferred Stock for his interest, on the First and Second Section bonds, to January 1, 1861; on the Third Section bonds to July, 1861; on the Southern Wisconsin Line bonds to January 1, 1862. The mortgage to be for 30 years, at 7 per cent., and not to exceed $2,556,000 (which is the present amount of all the First mortgages above-named). The company to provide annually the sum of $204,480, (being 8 per cent. on $2,556,000,) and, after paying interest at 7 per cent., the balance to be applied as a sinking fund, to redeem, at par, semi-annually, an equal amount of First mortgage bonds. The bonds to be thus paid are to be drawn for. Scrip stock to be issued with each bond, with power to vote thereon, if the same can be legally issued under existing laws, if it cannot, then application shall be made the Legislature for the necessary authority.

Second: The 10 per cent. Second mortgage bondholders, being subscribers to the agreement, to receive, for principal and interest, first class Preferred Stock (in the same class with the interest on the First mortgage bonds).

Third: The Third mortgage bondholders, being subscribers to the agreement, to receive the second class Preferred Stock (with the City of Milwaukee).

Fourth: The City of Milwaukee, if they assent to this agreement within the time limited, to receive the second class preferred stock for their Second mortgage of Southern Wisconsin Line, and for their $234,000 claim.

Fifth: The floating debt-holders to receive common stock for their debt and interest, provided they sign the agreement and surrender the evidence of indebtedness to the Trustees on or before the 15th day of September, 1860.

Sixth: So much stock as remains, after deducting the above amounts from $7,500,000, to be divided pro rata among the stockholders (about 67 per cent.)

The position of the new company, under this agreement, will be about as follows:

Amount of mortgage debt (for which the same amount of first class Preferred Stock is to be reserved, or scrip stock issued therefor)		$2,556,000
Amount of first class Preferred Stock issued:		
For inter't on First mort. b'ds.	$411,466	
For Second mortgage bonds, principal and interest	678,536	
		1,090,016
Amount of second class Preferred Stock issued:		
For City Second mortgage Southern Wisconsin Line	$345,920	
For claim of City	290,910	
For Third mortgage bondholders, about	450,000	
		1,086,830
Common Stock:		
For floating debt	$525,347	
For $3,452,800 old st'k reduced as required by law, about 33 per cent.	2,211,807	2,767,154
Total		$7,500,000

Abstract *of the Report made by Isaac Seymour, Esq., Receiver, to the Bondholders, Aug.* 24, 1860.

Earnings from May 10, 1860, to July 31, 1860		$156,045
Cash on hand, May 10		10,343
Total		$166,388
Ordinary expenses	$105,583	
Paid old indebtedness	55,144	
		160,727
Cash on hand, Aug. 1, 1860		$5,661
Amount due for old indebtedness, and ordered to be first paid by the Court		$35,111
Estimated cost of improvem'ts and repairs that are needed		115,580
Total		$150,695

Abstract *of the Indebtedness of the Milwaukee and Mississippi Railroad Company, with interest to Sept.* 1, 1860, (*as furnished by the Company*).

Due employees, &c., preferred by order of Court		$35,112
Notes secured by mortg. of real estate.		21,378
1st mortg. 10 per cent. bonds, due July 1, 1861	$74,000	
1st mortg. 8 per ct. bonds, due July, 1862	526,000

Capital stock, general issue.	$2,685,000	
Issued for Farm mortgages	767,800	
		3,452,800
		$9,305,224

In addition to the capital stock above-named, the City of Milwaukee holds $325,000 as collateral security for its Second mortgage, on the Southern Wisconsin Line.

Extract *from the report of the Committee, appointed to confer with the Committee of the City of Milwaukee, to the Bondholders, Aug.* 24, 1860.

The undersigned, a committee appointed by you to confer with a Committee from the City of Milwaukee, beg leave to report, that they met with the Committee of the city, and after such mutual conference and consideration of the views and claims of the city, and that the representatives of the City of Milwaukee claim—

That their Second mortgage on Southern Wisconsin Line is as good as the Second mortgage on the main line, and that therefore it is not correct and fair to convert their Second mortgage into a preferred stock of a class inferior to a Second mortgage on the main line.

* * * * * * *

There is, no doubt, some appearance of justice

in the claim. The city, however, should consider that the plan is a compromise plan, and that the First mortgage bondholders have made large concessions; hence, that if instead of conceding on her part, she insists on her full claims, the First mortgage bondholders will not be satisfied to go into the same class preferred stock for their interest with Second mortgages on both main and Southern Wisconsin Line.

According to section 12 of the agreement of the 30th of July, now unanimously adopted as "the plan," modifications are dependent on the vote of the "majority in interest of each class of subscribers, of mortgage bondholders, on which suits of foreclosure are now pending," at any regular or special meeting of subscribers duly called.

If the City of Milwaukee insists on her claim, which we are not prepared to dispute as unjust, then the First mortgage bondholders will decline funding their interest in the same class preferred stock, with the Second mortgage on main and Southern Wisconsin Lines, but claim to be entitled to fund their interest in First Preferred Stock, and that the Second mortgages then convert capital and interest into Second Preferred Stock, Third mortgages receiving Third Preferred Stock. The plan throughout to be modified in sense to fully carry out their views, and so much of the adopted plan as is not in accordance therewith to be considered null and void.

Considering the original position of the city and the Railroad Company with reference to the $234,000, your committee have offered to recommend that $150,000 of said sum be considered as Third mortgage, and be entitled to same rights in reorganization as the Third mortgage bonds now out. The representatives of the city have rejected this view of the matter, and claim the same position for their Southern Wisconsin Second mortgage as for main line Second mortgage. Your committee do not advocate the city's claims, but leave it to the meeting to decide the question.

The Second mortgage on main line were and are a Second mortgage on a finished line, and bear 10 per cent. interest.

The Second mortgage on Southern Wisconsin Line, were and are a second lien on an unfinished line, and bear only 7 per cent. interest.

The committee now propose as a compromise that the city be allowed to receive for their $234,000 claim the same preferred stock as Third mortgage holders receive on condition that the city waive their claim as to Second mortgage on Southern Wisconsin Line, and accept the proposal for $234,000 within sixty days.

The time within which the agreement may be signed is extended to September 15, 1860.

A Self Dumping Railroad Car.

Mr. A. Cooley, of Philadelphia has recently patented a self dumping railroad car, the particular features of which are thus given in the *Railroad Register*:

The "invention consists of a car, with a body of any suitable form, and having, at or near its opposite ends, flanged wheels turning on permanent axles, and having any convenient number of hinged doors carrying flanged wheels, the whole being combined with rails so constructed and arranged that as the car traverses the same, the above-mentioned doors may be self-opening, thereby discharging the load, and self-closing, thereby forming the bottom of the car ready for the reception of another load."

Without confining himself to the precise form of car illustrated and described in the schedule referred to in his patent, or to any particular number of doors, he claims as his invention and desires to secure by letters patent.

"The body of the car having, at or near the opposite ends the wheels turning on permanent axles, and any convenient number doors carrying wheels; in combination with rails so constructed and arranged that, as the car traverses the said rails, the doors may be self-opening and self-closing as set forth for the purpose specified."

Lexington and Big Sandy Railroad.

The purchasers of this road, who paid $60,000 for it at the sale under the decree of the Fayette County Court, have held a meeting and appointed a Committee to solicit a proposition from the Louisville and Frankfort Railroad Company to complete the line to Mt. Sterling. The purchasers manifest a disposition to take hold of the work at once, and eventually complete it at an early day. We hope to see the work carried forward with energy.

Boston and Maine Railroad.

The earnings of this road for the fiscal year ending May 31, 1860, were:

From Passengers		$533,532 46
" Freight		337,538 77
" Rents		10,733 65
" Mails		9,798 75
" Interest		14,022 23
Surplus P. S. & P. R. R.		10,000 00
		$915,625 86
And the expenses were:		
Repairs of road	$71,630 24	
" bridges	39,442 26	
" buildings, etc.	27,739 55	
" locomotives	34,007 22	
" cars	24,513 92	
Passenger expenses	63,087 35	
Freight "	56,695 21	
Wood	49,339 40	
Coal	5,633 91	
Oil and waste	9,195 19	
Miscellaneous	76,745 52	
Rent of Danvers road	7,500 00	
		565,529 77
Net earnings		$350,096 09
Charged for renewals of iron	$27,703 51	
Do. for depreciation of locomotives and cars	6,215 25	
		33,918 76
Balance		$416,177 33
The balance of earnings on the 31st May, 1859, was		$428,931 79
The earnings over expenses, 1859-'60, were	$416,177 33	
From which deduct two dividends, 8 per cent.	332,456 00	
And there remains after paying dividends, etc.		83,721 33
		$512,653 12
Add excess of appropriation for land bills	$568 66	
Add Danvers Railroad Sinking Fund	6,523 84	
		7,092 50
		$519,745 62
Deduct loss on old freight bills	$405 98	
Deduct loss on Manchester & Lawrence R. R. Methuen Branch and contract accounts	8,541 09	
Deduct allowance made on settlement with Newburyport R. R. Co.	11,681 41	
		20,628 48
Leaving balance of earnings 31st May, 1860		$499,117 14

Compared with last previous year the earnings and expenses are as follows:

	1858-'9.	1859-'60.
Gross earnings	$818,681 22	$915,625 86
Expenses, renewals, etc.	370,222 23	416,177 33
Net earnings	$448,458 99	$499,448 53

—being an increase for the year 1859-'60 on the net earnings of $50,989 54.

The miles run by trains in 1859-'60 was 553,484, viz: by passenger trains 367,244, by freight trains 175,960, by wood trains 1,167, by gravel trains 4,336, and by extra trains 4,777. The total in 1858-'59 was 533,294. Increase last year 50,190 miles.

Passengers carried in the cars	1,821,495
Passengers carried one mile	27,004,491
Merchandise carried in the cars, tons	263,447
Tons carried one mile	7,292,101

The road operated by this company includes the Boston and Maine proper and the Danvers and Newburyport railroads under lease with the following mileage:—

Boston and Maine Railroad	74.26 miles
Branches (Methuen, Medford and Great Falls)	8.79 "
Total road owned by company	83.05 "
Danvers railroad	9.20 "
Newburyport railroad	26.00 "
Total road operated	118.25 "

The equipment consists of 32 locomotive engines, 54 passenger cars, 19 baggage cars and 587 freight cars of various descriptions.

The following accounts of the road and its connections are from the President's Report. The very interesting and important facts set forth therein are worthy of attentive perusal by all having the direction of railroad property.

"It is now twenty-four years since the first section of this road was opened, from its connection with the Lowell Road at Wilmington, to Andover. Twenty years have elapsed since it was put into operation as far as Exeter, N. H., and fifteen years since the cars were placed upon the Extension road terminating at Haymarket Square in Boston. Almost all of the iron, with the exception of some portions of the track in New Hampshire, which was originally laid, has been replaced by new rails. A very large proportion of it more than once. The wooden cross-ties or sleepers have been renewed, perhaps twice upon an average. The structures over Charles, Miller and Mystic rivers have been almost entirely rebuilt. The most expensive draw-bridges have been replaced by others on an improved principle. The principal wooden bridges have been thoroughly repaired, strengthened, or re-constructed. The road-bed has been kept up, and is in a better condition than ever. The masonry has been renewed wholly or partially as the case required. The fences have been thoroughly repaired, and new fences have been recently erected where necessary, so that the road is, in this respect, as well guarded from the trespasses of cattle as can reasonably be expected. The road now is in such a condition that, for a period of five or ten years to come, it will not require any more repairs, probably less, than for a like period of time recently expired. The same remarks will hold good in reference to the rolling stock, machinery and fixtures of the road.

These suggestions are intended to apply, particularly, to the Boston and Maine road, and not to the Newburyport and Danvers roads. There the construction is much more recent. The iron is not sufficiently worn to require much renewal. Many of the old sleepers have been replaced with

new, and many more are in the process of being laid down. After some expenditures in grading up the road-bed, repairing and building fences, renewing the masonry and replacing a small quantity of the iron, that road will require no more outlay than is usual for a road of similar amount of business. Indeed, whether we regard the nature of the soil, the surface of the country traversed, or the very small amount of bridging, the Newburyport and Danvers may be considered, in their physical aspects, as a favorable line of road.

These remarks are made to show the permanent character and value of your investment. If, since the road has been in operation, its superstructure rolling stock, etc., have been substantially changed and renewed, and if, for a series of years in the future, it can be kept up to its present state of efficiency with the same expense as in years past, you certainly have one of the most important elements of the data necessary to form an opinion upon this interesting subject.

The prospect of a continuance of an equal or greater amount of traffic along the line of the road—its relations with connecting roads—the liability of being interfered with by competition from other roads, constructed or to be constructed, are other elements of weighty consideration in estimating the value of this corporate property.

In order to show the magnitude and progressive character of this corporation, it may be stated that, for ten years immediately preceding June 1, 1860, the gross amount of revenue was the sum of $8,007,081 45, or $800,708 14 per annum on the average.

The amount received during the first five years of this term was	$3,705,015 81
The amount received during the second five years was	4,302,065 64
The average amount received annually during the first term was	$741,003 16
The average amount received annually during the second term was	860,413 12
The average annual excess of the 2nd term was	$119,409 96

It will be observed, also, that the whole effect of the financial shock of 1857 was visited upon the latter five years of that period. No such general prostration of business occurred during the first five years.

This exhibition of the progressive character of this road speaks well for its future destiny. We know of no reason why the receipts may not continue to increase. True, the increment may not be as great, but it will, in all probability, be regular and permanent."

CONNECTING ROADS.

The report devotes considerable space to the connecting roads.—In reference to the Manchester and Lawrence, the directors recommend a modification of the contract with that company, which will expire December 31, 1861, as its terms are unfavorable to the interest of their own. A settlement has been finally made with the Danvers Company, by the payment of 25,000 in addition of $125,000, the original amount guarantied for the lease of that road for 100 years. The whole amount, $150,000, will be due from the Danvers Company at the expiration of the lease. Of the obligations guarantied, the Boston and Maine Company have purchased and own $71,000. Since the last annual report, this company have leased the Newburyport railroad for a period of 100 years, for the sum of $300,000; $75,000 of which was paid in liabilities against the road, and $225,000 in cash, By the terms of the lease, at its expiration, the total sum is to be a debt due from the Newburyport to the Boston and Maine Company. By these contracts the latter company secures the control of 36 miles of road, for a period of 100 years, by a total investment of $450,000. The Portland, Saco and Portsmouth, dividends on the share capital of which, at the rate of 6 per cent., have been guarantied by the Boston and Maine, in connection with the Eastern, has always gained the dividend paid, and has recently paid to the Boston and Maine $10,000, from surplus earnings. The Maine extension has always been a successful and profitable work.

The results of the past prosperity of the road, so far as it has reached the stockholders, is shown in the unbroken succession of dividends paid since the completion of the line in 1838. These are 44 in number and have been paid as follows:

The officers of the Company for 1860-'61 were:

President—FRANCIS COGSWELL, Andover, Mass.

Directors—James H. Duncan, George W. Kittredge, Daniel M. Christie, Peter T. Homer, Israe M. Spelman, Henry Saltonstall.

Superintendent—WILLIAM MERRITT, Boston.

Clerk—JAMES C. MERRILL, Boston.

An English Opinion of American Securities.

Attention has been drawn to the recent improvement in American securities, and particularly in railway securities. It is due less, perhaps, to the actual rise of "the quotations" than to certain active movements, and the revived confidence in particular lines. Of course there must be some reason for any such movement; and, indeed, the facts are very simple, and scarcely beneath the surface. In the first place, the causes of the decline which took place in American railways a year or two ago are as clear as the causes why the harvest in this country is now so late. We have had a very dull summer, with much rain; hence wheat has be slow to ripen, and the harvest doubtful. In America railways depend, to a great degree, upon the carriage of agricultural produce. The harvests of 1857 and 1858 were bad throughout the greater part of the United States and the North American continent, and the yield of 1859 was very partial; hence a decided contraction in the business of railways, with a corresponding diminution in the value amongst those who are governed so much as the commercial classes are by temporary appearances. The sequel, however, has shown us that even this cause has a partial and transient operation. It is not only that the seasons vary for good as well as for evil, but such is the vast growth of the Anglo-Saxon colony, which is only by degress working out the conquest of the American continent, that the increase of population, the extension of agriculture, and the general spread of industry have increased the use of the railway to such an extent as nearly to compensate the immediate cause of the decline. Although the crops of the three years, 1857, 1858 and 1859 were deficient, still the produce forwarded from Chicago in 1859 almost equalled that of the abundant year 1856; the growth of population and the extension of culture having, within that short period, so far made good the actual failure in the crops. A country whose resources exhibit this extraordinary vigor, and sustain this power of recuperation, must not only have a perpetual tendency to increase any favorable reaction as compared with the unfavorable, but must create a constant developement in the average returns. Indeed, we have done nothing more than utter a truism with regard to the well known condition of the United States.

There is another interesting fact that bears upon the subject. Corn is more bulky than live stock, and is less convenient to carry than flour; and what has been the proportion of their transport? In the latest years the corn has been converted more and more into flour or into live stock; and we see, accordingly, that the transport of corn does not increase in the ratio of flour, while the gross transport of cereals does not increase in the proportion of live stock. The business of the railways is becoming intrinsically more valuable, as well as collectively greater.

Another interesting fact is, that even those railways which have been most depressed h ve still

proved valuable to their shareholders. We do not speak upon generalities or abstract ideas. For instance, the Great Western Railway of Canada, which was said last year to yield no return, has yet, from the day of its opening down to the 31st of January, 1860, yielded to its shareholders an average dividend of 4 per cent. per annum. Any one desiring to see how this part of the case is made out will find the facts and figures stated with the fullest detail in a pamphlet, published by Effingham Wilson, a "Letter on the origin, present position, and future prospects of the Great Western Railway of Canada," written by Mr. William Lance; the man perhaps, who knows more about such American securities than any other in London.

The growth of business in the American Union is such as almost to exceed the imagination of us comparatively slow English. Again we will give an instance. The great centres at which the trade in Western produce is collected and sent forward Eastward are Milwaukee, Chicago, St. Louis and Cincinnati, whence it is carried forward to the Atlantic and to Europe. The growth, even of the most recent of these places is something that would have looked miraculous half a century back. Within the life of men who are still in their vigor an Indian track was the only guide from Chicago to the Mississippi. So late as 1830 land was of so little value in the neighborhood that a gentleman who is known declined to take possession of some conceded to him for services during the Black Hawk Indian war, saying that "he had sufficient garden ground." Still fewer years back, farmers living within a hundred miles of Chicago found that the expense of "teaming" their wheat to that centre was so great as to exceed the value of the article in the market, a fact at which we need not wonder, since in some parts of Russia the cost of transport equals the value of the article within a distance of thirty miles. But Chicago is not in Russia. Fifteen years ago there was not a single line of railway entering the city; it now commands a traffic of 4,736 miles. These railways have cost, on a moderate estimate, £23,000,000 sterling; but what a transformation have they not effected in the place. The "garden ground," to which we have referred, is now in the very centre of the city, and worth some millions of dollars. Farms whose owners could not "team" to Chicago now team in a different sense, for the whole region for miles around is constantly loading the market of that central depot; and the twenty-three millions sterling which the line has cost have created property and produce worth millions upon millions, the toll upon the railway being an exceedingly small percentage on that value.

These are substantial facts, very intelligible to most English minds. They are evidently sufficient to explain why railway property has declined in the United States, and also why the value has rebounded so remarkably; but we have not yet made the reader appreciate the true extent of the rebound, the real proportion between the value of railway property on side of the Atlantic and on the other. In England we are wont to consider that our property is the great model in regard to security, to certainty of returns, and to everything else that is desirable. As compared with some other countries, we may, perhaps, be justified in boasting. Certainly, we see just now plenty of reasons why English speculators should look very much askance at Lombardo-Venetian railways, in comparison even with the least successful of our own lines. But if we turn Westward the comparison is altogether reversed. We have already mentioned the percentage paid upon an unsuccessful American line; compare this with our own lines. surely we have vicissitude enough here! It is not long since the Great Western was paying only two per cent., yet it is really one of the most valuable lines in the kingdom; and, from peculiar circumstances connected with the proportions of its fixed liabilities and its present developement, its shareholders may comfort themselves with the certainty that their new prosperity will continue and expand. Hence the striking rise of value in the market. It is a very short time since the shareholders in the London and North-western looked down upon the poor Great Western; but this year, through various circumstances, including parliamentary competitions, and of the preposterous policy of undertaking a dead weight in "defensive lines," the princely London and North-western is down to two and a half dividend.

When the comparison with the American railways is extended, however, the returns are still more striking. In the official report on the railways of Great Britain, Capt. Galton gives railway statistics for the year 1857, comparing the results in this country and in the United States:

	England.	United States.
Miles constructed and in use	9,119	26,210
Total cost of all in use.	£304,989,826	£216,887,750
Net earnings	4.7 per cent.	6.7 per cent.

A considerable number of the American railways, however, could scarcely be expected to make any large return. Some were intended to improve the value of the land through which they passed; and although unquestionably they will pay in the end, they are less to be regarded as commercial investments for ordinary railway purposes than as investments for the improvement of land, even though the railway were conducted at a loss. In some few cases American railways have been even less satisfactorily planned, having been undertaken solely to justify a grant of government land. If, therefore, we take any number of the more strictly commercial lines, we shall find a considerable increase in the proportion of net returns. We have before us a list of fifty American railways, constituting a very fair representative class; and we take a similar number of English railways, including the metropolitan and other leading English lines. They show the following totals:

	Cost.	Gross Income.	Net Revenue.	Per Cent.
English.	£247,019,626	20,004,723	10,502,315	4.25
Americ.	54,454,393	9,225,268	4,429,441	8.06

It is needless to add a single word—the figures speak for themselves. To the shareholders the American railways are twice as valuable as the English, although American lines do not call for such vast outlays of money as ours have done, are not nearly so heavy in the working expenses, nor so dear for the traveler.—*London Chronicle, Aug. 20th.*

Charlton and Randolph Railroad.

The work on this railroad is progressing finely. Messrs. Kelly have about 300 hands employed, and are going ahead with an energy and rapidity seldom surpassed. About five and a half miles of the road east of Huntsville are already graded, and need but little more to be done to be put in readiness for the ties. Recently part of the force was transferred to the west of the town, and about half a mile is there graded. The work will be pushed forward to Salisbury, in Chariton County, as rapidly as possible. It is expected to reach that point by the first of December. The heavy grading will be commenced shortly. Heavier work is required in and adjacent to Huntsville, than at any other place between Moberly and Salisbury. The contract for ties will be let out next week, and if the President can make satisfactory arrangements for the iron, which is highly probable, the whole road will be completed and in running order to Salisbury by December.

We have but little doubt that Brunswick will remain the western terminus but a short time. The people of the counties west, have taken hold of the matter in such spirit as leaves no doubt of their success. Carroll County has 25,000 acres of swamp lands. This, with a subscription of $50,000, is sufficient for that county. The people will willingly subscribe these. Ray County, next west, has just subscribed $200,000. The people of Clay County, who lately made a large subscription to the Kansas City and Cameron Railroad, since they have seen such fine prospects of the construction of the Missouri Valley Railroad, have so changed their policy to favor this road, as to reduce their subscription (by compromise) to the other, to $100,000.—*Huntsville Recorder.*

Death of Jacob Strader.

We are called to the melancholy duty of recording the death of almost the last of the pioneer boatman of Cincinnati, Capt. JACOB STRADER, who closed a long and useful earthly career Tuesday morning, bearing with him to the great hereafter the regrets of a host of personal friends and the universal esteem of his fellow citizens.

The Captain was a native of New Jersey—born in August, 1795—his parents were in moderate circumstances, and his youth was spent at the plow. Entranced with the glowing accounts of the Great West, he gathered up his little property, and, in 1817, found himself in Cincinnati in the employ of J. W. PIATT, banker, corner of Broadway and Columbia, in the Broadway Hotel—a banking institution, by the way, of no little importance in those days, as many of our old citizens well remember. He was successively engaged in milling, dry goods and commission and grocery business. His first essay in steamboating was on the first General Pike, built in 1818—first commanded by Capt. PENNYWAIT, then by ROWAN, STRADER being clerk.

The first Pike was a sternwheel boat, cabin below, no hurricane roof—a small, inconvenient little craft, whose significance and inefficiency would now excite only wonder and derision, and yet she was in that day thought to be quite the handsome thing by himself and Mr. GORMAN, long and well known afterwards under the firm of STRADER & GORMAN. The second, known as the "Little Pike," was built. This was the first attempt at sidewheels and cabin on deck. STRADER took command and Capts. SUMMONS and ARMSTRONG, pilots on the first Pike, were retained. These gentlemen afterwards for many years, and until their death, were in command of STRADER'S boats. Their next effort at progress in boat building was the Ben Franklin, called the White Cimneyed Ben. They built also the boat Portsmouth, Capt. EDMONDS, the Guyandotte, Capt. SEMBLE, followed by a still further advance towards steamboat comfort in the second Ben Franklin, called the Green Room Ben, from the fact of her having a ladies' cabin a half story above the deck. They owned the Commerce, Swiftsure, Long Pike, Mobile Ben, and many other boats, in all twenty-three including some eight or nine Pikes and the same number of Franklins—each new boat being an improvement upon the last, until the present Jacob Strader and Telegraph are models of all the latest improvements in steam navigation, being in comfort and splendor compared with the first Gen. Pike what Judge ESTIE'S dwelling is to a primitive log cabin, or a street railroad car to an omnibus. In 1830, Capt. STRADER secured the mail contract between Louisville and Cincinnati, having, since the first Pike, established a regular packet line between those ports. This contract he retained until he sold out to the present company, in 1846. In 1837, Capt. STRADER retired from personal charge of his boats, after a faithful and successful service of nearly twenty years, during which no history of steamboating can record any experience more prudent or prosperous than his.

But Capt. STRADER has had more to do with the history of Cincinnati than this. He was among the pioneers in the establishment of the first railroad to Cincinnati, the Little Miami, of which Gov. MORROW was the first President, and he the second, remaining at its head until declining health compelled him to resign some few years since. He was also the head of a large banking-house—JACOB STRADER & Co. In 1844, in company with the late Mr. A. HARKNESS and Mr. FOSDICK, he founded the immense cotton factory on Third and John streets. The structure and machinery upon it cost some $200,000 more. It is still in successful operation. Capt. STRADER has seen an immense city gradually rise about him; and he has himself been largely instrumental in her success and prosperity. He has seen a long generation rise and fall before him—he has bid farewell, one after the

other, to an host of the confreres of his early life and activity, until he saw the army of patriarchs, to whom this generation is indebted for their splendid heritage, dwindle down to a little band of gray heads, who are rapidly diminishing under the relentless fiat of old father Time. Years and infirmities increased upon the old Captain, until now, the few old friends and fellow pioneers of his youth are called upon to say farewell and God be with you on the final trip to that port where so many have gone before.—*Cin. Commercial.*

Commerce of New York.

The annual report of the New York Chamber of Commerce has been published in an octavo volume of 364 pages. The volume contains the proceedings and special reports of the year 1859; a list of members, January, 1860, with the by-laws in force; also the laws of the State, passed 1860, in reference to commercial matters; and elaborate reports on the following subjects for the year 1859: Asia, (Commerce with); Assay Office, New York; Banks; Battery extension; Boot and shoe market; California trade; Canals of New York; China trade; Clearing houses of New York; Coal trade; Coffee trade; Coinage; Collisions at sea; Coolie traffic; Cuba trade; Currant trade; Decimal weights and measures; Domectic manufactures of New York; Drug trade; Dry goods trade; Dye woods; Encroachments on the harbor; Fire in cotton ships; Frauds in cotton; Freights: Eruits; Hemp market; Hudson river; Indigo; Insurance, Marine and Fire; Key West Wrecks; Leather trade; Lumber trade; Magnetic telegraph; Naval stores; Newark Bay; Population and debt of New York City and State; Quarantine; Reciprocity treaty; Rice; Salt production; Saving banks; Sandy Hook; Staves; Sugar; Taxation in New York; Tea trade; Tobacco trade; Turpentine; Weights and measures; Wine and liquor trade, &c.

One of the most valuable contributions to the Chamber of Commerce reports, is the annual summary of marine losses, showing the number of ships, steamers, barques, brigs and schooners lost each month of the year, with the amount of loss on each. The official documents are also of value, and find a prominent place, viz: Treaty with China; progress of debt, taxation, and real and personal property, each year since 1805.

The executive committee acknowledge interesting and acceptable details contained in the official and other reports of the following gentlemen—information highly necessary to illustrate the important subjects under consideration: Hon. Howell Cobb, Secretary of the Treasury of the United States; Hon. William B. Reed, of Philadelphia; Professor John H. Alexander, of Baltimore, Md.; Professor Alexander Dallas Bache, Superintendent United States Coast Survey; James Ross Snowden, Esq., Director of the United States Mint; D. H Craig, Esq., of New York; D. T. Valentine, Esq., Clerk of the Common Council, New York; J. H. Upton, Esq., Special Agent of New York Board of Underwriters.

New Orleans and Ohio Railroad.

Matters of great interest to our road, and to our city, have transpired within the past three days. Judge Brown, the President of the Mobile and Ohio Railroad, reached our city on Wednesday last, and after an interview with the President and Board of the New Orleans and Ohio Road, and an address to the people of our city on Thursday night, the preliminary steps were taken with a view to the ultimate consolidation of the two roads, and the early completion of the road from Paducah to Union City, where it connects with the trunk of the Mobile and Ohio Road. To facilitate the important interests pending, Henry Enders, Esq., resigned his position as a member of the Board, and Judge Campbell resigned his position as President of our road, when Judge Brown was immediately elected a member of the Board and President of the company, and Judge Campbell was elected Chairman of the Finance Committee, and vested with the powers of President in the absence of Judge Brown.

If arrangements connected with the right of way, &c., in Tennessee can be favorably arranged the road will be promptly pressed to completion, and the cars will be running through from Mobile to Paducah before the 1st of January next.

We cannot refrain from calling the attention of St. Louis and Cincinnati to the above. The bare statement of the facts is sufficient to indicate to the intelligent business men of those cities that the connection of the Ohio River at this point with the extreme South is now beyond doubt, and is suggestive of the high importance on their part of an early connection with Paducah by branch lines from the Illinois Central and the Ohio and Mississippi Roads. The importance of this matter ought not, and, we believe, will not be overlooked by them.—*Paducah (Kentucky) Herald.*

Vicksburg, Shreveport and Texas Railroad.

This road has been completed to Delhi. The opening of the road to that place was made the occasion of great rejoicing. The Floyd *Louisianian* makes the following remarks on the advantages to Vicksburg and the country through which the road passes from its extension thus far towards its final termination:

The southern portion of Carroll, lying west of the Bayou Macon, has long felt the necessity of a railroad, and her interests have materially suffered from the want of a direct and speedy communication with the Mississippi river.

Our bayou, for at least one-half of the year, is useless for the purposes of navigation. The completion of the railroad to Delhi will give unsurpassed facilities to travel, for the reception of freight and the transportation to market of the agricultural products of our parish. We but reiterate what we have said, that that portion of the parish of Carroll lying west of the Bayou Macon, known as the "Bayou Macon Hills," is the best planting country in the South above overflow. The lands, on account of their inaccessibility, until within the last few years, have been overlooked. We think the prospects of this portion of our parish the most cheering; and we confidently anticipate a rapid emigration of good and substantial planters to our fertile country.

We can congratulate the city of Vicksburg, as well as our own citizens, on the completion of this road to Delhi; for if her merchants and business men will only use the proper exertions, they will secure a large, lucrative and constantly increasing business.

Injunction Upon a Railroad.

We learn from the Troy *Whig* that an injunction has been served on the parties who purchased the Albany, Vermont and Canada Railroad, to prevent their taking up the rails on the line of the road from the Junction to Eagle Bridge. The Troy and Rutland Railroad Co. are the parties on whose motion the injunction has been issued. During the last week the owners of the line commenced removing the rails, whereupon Judge Gibson, as Attorney for the road, made out the necessary papers and procured a temporary injunction from Judge Peckham. The matter is to be argued before him in this city on Monday night. J. B. Gale, Esq., is Attorney for the defendants, whose President is James Forsyth, Esq. If decided in favor of the moving parties the rails must remain in their present position. Of course they have reasons of their own for so desiring. The injunction is claimed on the ground that the company has no right to abandon a franchise. Both sides will be represented here by able counsel, and the principles decided will be quite important as precedents.

James River and Kanawha Canal.

At an adjourned meeting of the stockholders of the James River and Kanawha Company, held last night, the Committee of thirteen, to whom had been referred the agreement entered into between E. de Bellot des Minieres for a French company of capitalists, Thomas H. Ellis for the Board of Directors of the James River and Kanawha Company, and Alex. R. Holladay for the Board of Public Works, for the sale of the James River and Kanawha Canal, made a report, which was adopted almost unanimously, only three votes being cast against it.

The report states that the further action of the Legislature will be necessary to make the agreement final. It fixes the capital of the new company at no less than twenty nor more than thirty-five millions of dollars—requires one million of dollars' worth of registered stock to be deposited with the Commonwealth, four hundred thousand dollars with the present company, and three hundred thousand dollars with the State, to pay for the Kanawha improvement, when the works are to be transferred.

It also provides for the completion of canal to the Ohio river in eight years, and the enlargement of the Dock in ten years—and provides for immediate repairs to the canal between Richmond and Buchanan, including dams, bridges, aqueducts, &c., for an annuity to the State of $135,000, which is to be perpetual.

After the reading of the report, a resolution was offered by Mr. Grattan, and a scale vote being called, was adopted, as follows: Ayes, 11,372; noes, 3. It reads thus:

Resolved, That the agreement reported by the Committee be and the same is hereby approved, and that Thos. H. Ellis, President of the company, be and he is hereby instructed to execute the said agreement on the part and in behalf of the James River and Kanawha Company, upon the execution of the said agreement by E. de Bellot des Minieres, in behalf of himself and the parties he represents.

Gen. Taliaferro, from the Committee, offered the following resolutions, which were adopted:

Resolved, That the stockholders of the James River and Kanawha Company hereby express their high approval of the scheme entertained and proposed by Messrs. Bellot des Minieres Brothers & Co., of establishing docks in the city of Norfolk, or other point in this State, with a view still further to facilitate and accommodate the direct export and import trade of Virginia; and they cordially recommend the said scheme to the favorable consideration of the General Assembly.

Resolved, That in view of the magnitude of the public interests involved, and the importance of speedy action, the Governor of the State be and he is hereby earnestly requested to convene the General Assembly in extra session, at such time as he may deem expedient, for the purpose of considering the agreement which has been approved by

the stockholders, with a view to the completion of the James River and Kanawha Canal.

A motion was made to publish the proceedings in the newspapers of Richmond, Norfolk and Petersburg, which was adopted, and the meeting then adjourned.

Thus it will be seen, that so far as the stockholders are concerned, the Canal has been parted with to the French Company, as soon as they comply with the terms, and the Legislature confirms the sale.—*Richmond Despatch, Aug.* 31.

Knoxville (Tenn.) and Kentucky Railroad.

The Knoxville (Tenn.) *Register*, of the 16th, says:

This company is making rapid progress in the construction of this road, near four hundred hands being now at work. The iron for the first ten miles has been purchased from a company manufacturing in Alleghany county, Md. The rail is the same pattern, though heavier, than that used on the Orange and Alexandria road, and will be delivered at Knoxville for less price per ton than any railroad iron ever heretofore brought to this place—the whole cost per ton of 2,240 pounds being only $56 delivered at Knoxville. For this iron the company pay cash on its delivery at Alexandria, Va., the first instalment to be delivered at that point between the 15th inst., and the 1st of September. A locomotive exactly similar to the two new locomotives—the Knoxville and the Bristol—recently brought on the East Tennessee and Virginia road, has also been purchased at one of the manufactories in Paterson, N. J. From all this it will be seen that, by the middle of September or the 1st of October, the track-laying will be commenced, and it is the intention of the company to have the track down and the cars running to the first station, ten miles from the city, by Christmas day. The difference between the estimates and the actual cost of the grading of the first three miles now ready for the track was only $24 57.

Interest on Stocks, Bonds, etc.

The Southwestern Railroad Company of Georgia have declared a dividend of 4 per cent. for the 6 months ending July 31st, and a further extra dividend of 5 per cent. on the same stock, both dividends payable on the 15th inst.

The trustees of the first mortgage bondholders of the Vermont Valley Railroad Company have declared a dividend of 50 per cent. (being the balance due) on coupons of October 1, 1856, payable on and after August 29, 1860, at the office of the treasurer of the Company in Bellows Falls. For the convenience of bondholders in New York and elsewhere, the dividend will be paid for the space of one month, viz., from the 29th of August to the 29th of September, at the office of Alexander Hamilton, jr., No. 41 Wall st., Jauncey Court.

The coupons of the city of Toledo, due September 1st, will be paid by Bliss, Williams & Co., No. 4 Wall st.

Mr. Haws, the City Comptroller, invites proposals for $250,000 of Croton water stock, until the 13th of September next, at 2 o'clock P. M. This stock will bear interest at the rate of 6 per cent. per annum, payable quarterly, and the principal is re-imbursable on the 1st of November, 1883. The Comptroller also invites proposals until Aug. 16, at 2 P. M. for $250,000 of Central Park Improvement Fund stock. It will be issued in shares of $100 each, bearing interest at the rate of six per cent. per annum, payable quarterly, and the principal redeemable on November 1, 1876.

Messrs. Clark Dodge & Co. pay the interest on the bonds of Johnson County, Iowa. The interest coupons due Sept. 1, upon the Florida, and the Florida, Atlantic & Gulf Central Road 7 per cent. bonds, will be paid at the office of H. Meigs, jr., and Smith, No. 30 William st.

The Illinois Central Railroad Company is now paying the principal of the Free Land bonds, due Sept. 1st.

Southern Pacific Railroad.

The Marshall *Republican*, of the 11th ult., has the following notice of Dr. Fowlkes, and the Southern Pacific Railroad:

On Tuesday last, Dr. Fowlkes left Marshall for Memphis and New York, carrying with him the good will and best wishes of our citizens.

The friends of the Southern Pacific Railroad have reason to congratulate Dr. Fowlkes on the success of his labors. At no period since the commencement of this great enterprise, has it occupied such a commanding position before the public.

Dr. Fowlkes, during his brief stay in Marshall, has, we understand, effected an arrangement which virtually extinguishes $250,000 of the paper previously given for its indebtedness. The remaining portion of the paper given in payment of the Texas debt will be discharged in less than sixty days, and ample fund furnished to meet all current expenses, to carry on the work vigorously.

The President of the company has been ordered, by resolutions of the board, to purchase the iron for one hundred miles of road, for which he has ample means.

Messrs. DeGraffe & Smith expect to commence, without further delay, active operations on the work. Their contract with the company requires the construction of fifty miles of road in fifteen months, but it is their desire and intention to finish it much earlier. For this purpose they propose to let out sub-contracts at reasonable rates for cash. Mr. Smith has left for the Northwestern States, to purchase corn, provisions and other supplies, to be in New Orleans ready for shipment as soon as navigation opens in Red River.

The stock books have been closed.

Pittsburg and Connellsville Railroad.

We are informed that the work of laying the iron on the Turtle Creek Division of the Pittsburg and Connellsville Railroad will be commenced in a few days, and the prospects are favorable for the completion of the road to Pittsburg in two or three months. Once completed to Pittsburg, the future of the road is full of promise, and the completion of the Eastern Division to Cumberland may be looked for as a necessity at an early day. The company has had many obstacles to overcome in the construction of the Turtle Creek Division, owing to the avaricious and illiberal course of some of whom the right of way had to be procured. But all the difficulties have been surmounted, and the trains will shortly run regularly to the "Smoky City."—*Connellsville Patriot.*

New Orleans and Opelousas Railroad.

The bondholders of the New Orleans, Opelousas and Great Western Railroad are notified that provision has been made for the payment of the October coupons of interest at London, New York, and in this city. The punctuality with which this company meets all of its obligations, as well as the wisdom and foresight displayed in its general mangement, are the universal theme of some of our soundest financiers and largest capitalist. The bonds at present upon the market are being absorbed for permanent investment by those of our citizens who appreciate unquestionable security with remunerating returns beyond wild speculation with greater prospective (though too often doubtful) results. The New Orleans, Opelousas and Great Western Road is being rapidly extended, and when completed cannot fail to be one of the safest and most profitable enterprises in the country. In fact, it is calculated that at no distant day the alternate sections of land accruing to the company along the whole line of railroad will more than reimburse the full amount expended in its construction and equipment.—*N. O. Picayune.*

Railroad Earnings.

The earnings of the Rock Island and Chicago Railroad Company for August were $133,450
Do. 1859 84,146

Increase $49,304

The receipts of the Grand Trunk Railway of Canada for the week ending August 18,
were $52,395 14
Week ending August 20, 1859..... 41,954 92

Increase in 1860 .....$10,440 22
Total traffic from July 1st, 1860 .....$375,109 27
Same period last year 280,872 13

Increase $94,237 14

The following are the earnings of the Great Western Railway of Canada for the week ending August 24, 1860:

Passengers $21,963 90
Freight and live stock 15,080 25
Mails and sundries 1,410 60

Total $38,454 75
Corresponding week of last year..... 34,968 28

Increase $3,486 46

The earnings of the Troy and Boston Railroad for the month of July compare as follows:

July, 1860. .....$30,410 37
July, 1859. ..... 24,991 82

Increase $5,418 55

The business of the road for the four months of 1859 and 1860, ending August 1, compares as follows:

	1859.	1860.	Increase.
April	(about)		$3,000
May	$23,181	$26,842	3,361
June	21,956	27,446	5,400
July	24,991	30,410	5,419

Increase in four months $17,570

The earnings of the Cleveland and Toledo Railroad for August were $65,910
Do. 1859 62,500

Increase. $3,410

The Hudson River Railroad earnings were:

August, 1860 .....$167,219 75
" 1859 ..... 155,163 78

Increase $12,055 97

EARNINGS FOR THREE YEARS.

August, 1858 .....$139,488 64
" 1859 ..... 155,163 78
" 1860 ..... 167,219 75

The following is a statement of the traffic receipts of the Northern Railway of Canada for the week ending August 25th:

Passengers $1,435 97
Freight 4,135 86
Mails and sundries 78 56

Total receipts for the week $5,650 39
Corresponding week, 1859..... 4,230 49

Increase $1,419 90
Total traffic from Jan. 1, 1860 .....$209,462 73
Corresponding period of 1859..... 144,876 88

Increase in 1860 .....$64,585 85

The earnings by the Chicago, Burlington and Quincy Railroad, in August, were:

	1859.	1860.
Freights	$85,295 34	$183,211 00
Passengers	41,716 41	43,430 50
Mails, etc.	4,187 74	3,380 16
Total	$131,199 49	$230,021 66
Increase		$98,822 17

Railroads of the State of Connecticut, 1839—1859.

Statement showing the Share Capital, Indebtedness, Cost, Mileage, Receipts for transportation of Passengers, Receipts for transportation of Freight, Receipts for transportation of Mails, Operating Expenses, Net Earnings, and Dividends paid by the Railroad Companies of the State of Connecticut, for each year, since the opening of the first road in 1839:

The rates of gross earnings of all the roads of the State has equaled about 12.50 per cent. of their cost, and of net earnings 5.34 per cent. The rate of dividends paid on the aggregate share capital has been 2.84 per cent. The ratio of current expenditures to gross earnings has been about 57.29 per cent. The rate of net earnings would be slightly increased but for the rent paid for leased roads, which is included in current expenditures.

Of the total share capital in 1859, $14,993,227 only $7,564,189 was productive, leaving $7,429,038 or about one-half the amount unproductive. On the productive portion dividends to the amount of $418,825 were paid, equaling 5½ per cent. The average rate for the whole amount, productive and unproductive was 2¾ per cent. The average dividend on the total share capital for the 21 years included in the table has been 2.8 per cent.

In 1859, interest was paid on $7,602,499 of the total indebtedness of the companies, leaving unproductive the sum of $2,161,326.

From these returns it would appear that of the total liabilities of the railroad companies of the State in 1859, $24,747,869, there was $17,166,688 productive, and $7,581,181 unproductive—the latter being, with the above insignificant exception, share capital.

The following is a statement of the earnings of the Buffalo, New York and Erie Railroad (Buffalo to Corning) for August, 1860, compared with the same month of last year:

	Aug., 1859.	Aug., 1860.
Passengers	$15,399 07	$16,428 29
Freight	28,461 36	38,915 57
Other sources	1,686 86	1,816 40
Total	$45,547 29	$57,160 26

The gross earnings of the Panama Railroad Company for July were:

From Passengers	$42,832 25
" Freight of merchandise	60,117 85
" " treasure	12,731 43
Total	$115,681 58
July, 1859	135,000 00
Decrease	$20,000 00

The above figures do not include any mail money. The increase in freight earnings is nearly 100 per cent. on 1858.

The receipts of the Grand Trunk Railway of Canada for the week ending August 25th, 1860, was $60,734 29
Corresponding week last year 46,381 09
Increase $14,353 20
Total traffic from July 1, 1860, to date $435,843 56
Corresponding period, 1859 827,253 22
Increase $108,590 34

Central Ohio Railroad.

The annual meeting of the stockholders of the Central Ohio Railroad was held in Zanesville on 28th ult. The old Board of Directors was unanimously re-elected, as follows:

H. J. Jewett, George James, C. B. Goddard, and Daniel Applegate, Muskingum county; Isaac W. Hall, Guernsey county; J. D. Wright and David McCarty, Belmont county; Elias Fasset and Geo. B. Wright, Licking county; D. W. Deshler and J. Wm. Baldwin, Franklin county; Walter B. Brooks and Thomas C. Jenkins, Baltimore, Md.

Tredegar Iron Works.

A first class locomotive is now being finished at the foundry of Messrs. Joseph R. Anderson & Co., Richmond, Va., for the York River Railroad Company. It is to be called the 'Atlantic.'

We understand that an invitation is about to be extended to the Board of Public Works to take a trip on the line. We have no doubt but that they will be highly pleased with it in every respect.—*Richmond Enquirer.*

Baton Rouge and Grosse Tete Railroad.

We copy the following, in regard to the Baton Rouge and Grosse Tete road, from the Baton Rouge *Advocate.* Announcing the return of Mr. W. S. Pike, the editor says:

In company with Col. Duralde, President of the Grosse Tete Railroad, arrangements have been effected to procure the iron necessary to lay down the unfinished portion of that road beyond its termination on the bayou. We are also informed that Judge Boyce made the negotiations for eighty miles of iron for the Central Stem Road, which is to connect with the Grosse Tete road at the Atchafalaya.

The Baton Rouge and New Orleans road, we are happy to learn, is also in a fair way of being undertaken again, and with the fairest promises of success. Mr. Pike informs us that negotiations have been opened with responsible parties to take the contract, and we are in hopes that in a few days we will be able to announce to our readers that the work will be commenced with vigor and eventually completed to the satisfaction all.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, etc., etc.

An *asterick* (*) occurring in the column headed "Rolling-Stock," signifies that the cost is included in that of "Railroad and Appurtenances." A *dash* (—) signifies "nil." Running *dots* (.....) signify "not ascertained." Land-Grant Railroads are in "*italics.*"
